

NVML

vR580 | September 2025

Reference Manual

TABLE OF CONTENTS

Chapter 1. NVML API Reference.....	1
Chapter 2. Known Issues.....	3
Chapter 3. Change Log.....	4
Chapter 4. Deprecation and/or Removal Notices.....	23
Chapter 5. Modules.....	25
5.1. Device Structs.....	26
nvmlPciInfoExt_v1_t.....	27
nvmlPciInfo_t.....	27
nvmlEccErrorCounts_t.....	27
nvmlUtilization_t.....	27
nvmlMemory_t.....	27
nvmlMemory_v2_t.....	27
nvmlBAR1Memory_t.....	27
nvmlProcessInfo_v1_t.....	27
nvmlProcessInfo_t.....	27
nvmlProcessDetail_v1_t.....	27
nvmlProcessDetailList_v1_t.....	27
nvmlC2cModelInfo_v1_t.....	27
nvmlDeviceAddressingMode_v1_t.....	27
nvmlRepairStatus_v1_t.....	27
nvmlRowRemapperHistogramValues_t.....	27
nvmlNvLinkUtilizationControl_t.....	27
nvmlBridgeChipInfo_t.....	27
nvmlBridgeChipHierarchy_t.....	27
nvmlValue_t.....	28
nvmlSample_t.....	28
nvmlViolationTime_t.....	28
nvmlGpuThermalSettings_t.....	28
nvmlUUIDValue_t.....	28
nvmlUUID_v1_t.....	28
nvmlPdi_v1_t.....	28
nvmlDeviceAddressingModeType_t.....	28
nvmlBridgeChipType_t.....	28
nvmlNvLinkUtilizationCountUnits_t.....	28
nvmlNvLinkUtilizationCountPktTypes_t.....	29
nvmlNvLinkCapability_t.....	29
nvmlNvLinkErrorCounter_t.....	29
nvmlIntNvLinkDeviceType_t.....	30
nvmlGpuTopologyLevel_t.....	30
nvmlSamplingType_t.....	30

nvmlPcieUtilCounter_t.....	31
nvmlValueType_t.....	31
nvmlPerfPolicyType_t.....	31
nvmlThermalTarget_t.....	32
nvmlThermalController_t.....	33
nvmlCoolerControl_t.....	33
nvmlCoolerTarget_t.....	34
nvmlUUIDType_t.....	34
NVML_VALUE_NOT_AVAILABLE.....	34
NVML_DEVICE_PCI_BUS_ID_BUFFER_SIZE.....	34
NVML_DEVICE_PCI_BUS_ID_BUFFER_V2_SIZE.....	35
NVML_DEVICE_PCI_BUS_ID_LEGACY_FMT.....	35
NVML_DEVICE_PCI_BUS_ID_FMT.....	35
NVML_DEVICE_PCI_BUS_ID_FMT_ARGS.....	35
nvmlProcessDetailList_v1.....	35
NVML_NVLINK_MAX_LINKS.....	35
NVML_MAX_PHYSICAL_BRIDGE.....	35
NVML_DEVICE_UUID_ASCII_LEN.....	35
NVML_DEVICE_UUID_BINARY_LEN.....	35
5.2. Device Enums.....	35
nvmlDramEncryptionInfo_v1_t.....	36
nvmlMarginTemperature_v1_t.....	36
nvmlClkMonFaultInfo_t.....	36
nvmlClkMonStatus_t.....	36
nvmlClockOffset_v1_t.....	36
nvmlFanSpeedInfo_v1_t.....	36
nvmlDevicePerfModes_v1_t.....	36
nvmlDeviceCurrentClockFreqs_v1_t.....	36
nvmlProcessUtilizationSample_t.....	36
nvmlProcessUtilizationInfo_v1_t.....	36
nvmlProcessesUtilizationInfo_v1_t.....	36
nvmlEccSramErrorStatus_v1_t.....	36
nvmlPlatformInfo_v1_t.....	36
nvmlPlatformInfo_v2_t.....	36
nvmlPowerValue_v2_t.....	36
nvmlEnableState_t.....	36
nvmlBrandType_t.....	37
nvmlTemperatureThresholds_t.....	37
nvmlTemperatureSensors_t.....	38
nvmlComputeMode_t.....	38
nvmlMemoryErrorType_t.....	38
nvmlNvlinkVersion_t.....	39
nvmlEccCounterType_t.....	39

nvmClockType_t.....	39
nvmClockId_t.....	40
nvmDriverModel_t.....	40
nvmPstates_t.....	40
nvmGpuOperationMode_t.....	41
nvmInforomObject_t.....	42
nvmReturn_t.....	42
nvmMemoryLocation_t.....	44
nvmPageRetirementCause_t.....	44
nvmRestrictedAPI_t.....	45
nvmGpuUtilizationDomainId_t.....	45
nvmFlagDefault.....	45
nvmFlagForce.....	45
MAX_CLK_DOMAINS.....	46
nvmEccBitType_t.....	46
NVML_SINGLE_BIT_ECC.....	46
NVML_DOUBLE_BIT_ECC.....	46
NVML_POWER_MIZER_MODE_ADAPTIVE.....	46
NVML_POWER_MIZER_MODE_PREFER_MAXIMUM_PERFORMANCE.....	46
NVML_POWER_MIZER_MODE_AUTO.....	46
NVML_POWER_MIZER_MODE_PREFER_CONSISTENT_PERFORMANCE.....	47
NVML_DEVICE_HOSTNAME_BUFFER_SIZE.....	47
NVML_GSP_FIRMWARE_VERSION_BUF_SIZE.....	47
NVML_DEVICE_ARCH_KEPLER.....	47
NVML_BUS_TYPE_UNKNOWN.....	47
NVML_FAN_POLICY_TEMPERATURE_CONTINOUS_SW.....	47
NVML_POWER_SOURCE_AC.....	47
NVML_PCIE_LINK_MAX_SPEED_INVALID.....	47
NVML_ADAPTIVE_CLOCKING_INFO_STATUS_DISABLED.....	47
NVML_POWER_SCOPE_GPU.....	48
NVML_POWER_SCOPE_MODULE.....	48
NVML_POWER_SCOPE_MEMORY.....	48
5.3. Field Value Enums.....	48

Chapter 1.

NVML API REFERENCE

The NVIDIA Management Library (*NVML*) is a C-based programmatic interface for monitoring and managing various states within NVIDIA Tesla™ GPUs. It is intended to be a platform for building 3rd party applications, and is also the underlying library for the NVIDIA-supported **nvidia-smi** tool. NVML is thread-safe so it is safe to make simultaneous NVML calls from multiple threads.

API Documentation

Supported operating systems and products:

For the list of supported operating systems and GPU products corresponding to your driver version, refer to the [NVIDIA Data Center Documentation](#).

The NVML library can be found at the following locations on Windows:

- ▶ Standard driver install: %ProgramW6432%\\"NVIDIA Corporation"\NVSMI\
- ▶ DCH driver install: \Windows\System32

Note that these libraries will not be added to the path on Windows. To dynamically link to NVML, add this path to the PATH environmental variable. To dynamically load NVML, call **LoadLibrary** with this path.

On Linux, the NVML library is named "**libnvidia-ml.so**" and can be found on the standard library path. To link against the NVML library, add the **-lnvidia-ml** flag to your linker command.

The NVML API is divided into five categories:

- ▶ Support Methods:
 - ▶ Initialization and Cleanup
- ▶ Query Methods:
 - ▶ System Queries
 - ▶ Device Queries

- ▶ Unit Queries
- ▶ Control Methods:
 - ▶ Unit Commands
 - ▶ Device Commands
- ▶ Event Handling Methods:
 - ▶ Event Handling Methods
- ▶ Error Reporting Methods:
 - ▶ Error Reporting

Chapter 2. KNOWN ISSUES

This is a list of known NVML issues in the current driver:

- ▶ NVML Field Values from #251 - #273 (Power Smoothing, Clock Event Reason, and Sync Power Balancing related field values) have changed between 13.0 and 13.0U1/v580TRD2. Any application that is using these field IDs must be recompiled using the NVML header file from CUDA 13.0 Update 1 in order to continue working correctly with NVIDIA drivers v580 TRD2 and beyond.
- ▶ On systems where GPUs are NUMA nodes, the accuracy of FB memory utilization provided by NVML depends on the memory accounting of the operating system. This is because FB memory is managed by the operating system instead of the NVIDIA GPU driver. Typically, pages allocated from FB memory are not released even after the process terminates to enhance performance. In scenarios where the operating system is under memory pressure, it may resort to utilizing FB memory. Such actions can result in discrepancies in the accuracy of memory reporting.
- ▶ On Linux, GPU Reset can't be triggered when there is a pending GPU Operation Mode (GOM) change.
- ▶ On Linux, GPU Reset may not successfully change a pending ECC mode. A full reboot may be required to enable the mode change.
- ▶ **nvmlAccountingStats** supports only one process per GPU at a time (CUDA proxy server counts as one process).
- ▶ **nvmlAccountingStats_t.time** reports time and utilization values starting from **cuInit** until process termination. Future driver versions might change this behavior slightly and account for the process only from **cuCtxCreate** until **cuCtxDestroy**.
- ▶ On GPUs from the Fermi family, current P0 clocks (reported by **nvmlDeviceGetClockInfo**) can differ from max clocks by a few MHz.

Chapter 3. CHANGE LOG

This chapter list changes in API and bug fixes that were introduced to the library.

Changes between v575 and v580

The following new functionality is exposed on NVIDIA display drivers version 580 Production or later.

- ▶ Fixed bug with **NVML_FI_PWR_SMOOTHING_*** field value numbering, which was different than the v570 values.
- ▶ Adjusted **NVML_FI_DEV_CLOCKS_EVENT_REASON_*** and **NVML_FI_DEV_POWER_SYNC_BALANCING_*** field value numbering to resolve overlap with **NVML_FI_PWR_SMOOTHING_*** field values.
- ▶ Added nvmlDeviceGetSramUniqueUncorrectedEccErrorCounts to get the counts of SRAM unique uncorrected ECC errors.
- ▶ Deprecated Applications Clocks APIs, which will be removed in CUDA 14.0:
 - ▶ nvmlDeviceSetApplicationsClocks
 - ▶ nvmlDeviceGetApplicationsClock
 - ▶ nvmlDeviceGetDefaultApplicationsClock
 - ▶ nvmlDeviceResetApplicationsClocks
- ▶ Deprecated nvmlDeviceGetViolationStatus, which will be removed in CUDA 14.0.
- ▶ Added nvmlDeviceGetNvLinkInfo to query device NVLINK info.
- ▶ Added nvmlDeviceGetPdi to retrieve the device GPU PDI.
- ▶ Added Multi-GPU mode NVLINK Encryption **NVML_CC_SYSTEM_MULTIGPU_NVLE**.
- ▶ Added V2 struct to nvmlDeviceGetNvLinkInfo to query NVLINK Firmware info.
- ▶ Added nvmlDeviceReadWritePRM_v1 to retrieve GPU PRM register contents.
- ▶ Added nvmlDeviceGetAddressingMode to retrieve the addressing mode for the device.
- ▶ Added nvmlDeviceGetRepairStatus to get ECC status info.
- ▶ Added nvmlDeviceGetGpuInstanceProfileInfoByIdV, which allows for MIG GPU instance profile info to be queried with profileId instead of profile name.

- ▶ Updated `nvmlGpuFabricInfoV_t` to v3 to include a new Health Summary field and new Incorrect Configuration statuses.
 - ▶ `nvmlGpuFabricInfo_v2_t` is deprecated and will be removed in a future release.
 - ▶ New Incorrect Configuration Statuses:
 - ▶ `NVML_GPU_FABRIC_HEALTH_MASK_INCORRECT_CONFIGURATION_INCOMPATIBLE_GPU_FW`
 - ▶ `NVML_GPU_FABRIC_HEALTH_MASK_INCORRECT_CONFIGURATION_INVALID_LOCATION`
- ▶ Added `nvmlDeviceGetPowerMizerMode_v1` to query the current and supported power mizer modes on Maxwell and newer GPUs. Power mizer mode provides a hint to the driver as to how to manage GPU performance.
- ▶ Added `nvmlDeviceSetPowerMizerMode_v1` to set the power mizer mode on Maxwell and newer GPUs.
- ▶ Added `nvmlDeviceSetHostname_v1` and `nvmlDeviceGetHostname_v1` to allow custom GPU hostname configuration.

Changes between v570 Update and v575

The following new functionality is exposed on NVIDIA display drivers version 575 Production or later.

- ▶ Added `nvmlSystemEventSetCreate` to create a system event set.
- ▶ Added `nvmlSystemEventSetFree` to release a system event set.
- ▶ Added `nvmlSystemRegisterEvents` to register system events on a system event set.
- ▶ Added `nvmlSystemEventSetWait` to wait for system event notification and obtain system event data.
- ▶ Added `nvmlGpuInstanceGetCreatableVgpus` to query the currently creatable vGPU types on the user-provided GPU Instance.
- ▶ Added `nvmlVgpuTypeGetMaxInstancesPerGpuInstance` to query the maximum number of vGPU instances per GPU Instance for the given vGPU type.
- ▶ Added `nvmlGpuInstanceSetVgpuSchedulerState` to set the vGPU scheduler state for the given GPU Instance.
- ▶ Added `nvmlGpuInstanceGetActiveVgpus` to query the currently active vGPU instances on the user-provided GPU Instance.
- ▶ Added `nvmlGpuInstanceGetVgpuSchedulerState` to query the vGPU software scheduler state for the given GPU Instance.
- ▶ Added `nvmlGpuInstanceGetVgpuSchedulerLog` to query the vGPU software scheduler logs for the given GPU Instance.
- ▶ Added `nvmlGpuInstanceGetVgpuTypeCreatablePlacements` to query the creatable vGPU placement IDs of the vGPU type within a GPU Instance.
- ▶ Added `nvmlGpuInstanceSetVgpuHeterogeneousMode` to enable or disable vGPU heterogeneous mode for the GPU Instance.

- ▶ Added nvmlGpuInstanceGetVgpuHeterogeneousMode to query the vGPU heterogeneous mode for the GPU Instance.
- ▶ Updated nvmlDeviceGetVgpuCapabilities to report whether GPU supports timesliced vGPU on MIG and whether MIG timesliced mode is enabled or not.
- ▶ Updated nvmlDeviceSetVgpuCapabilities to set the MIG timesliced mode vGPU capability of a device.
- ▶ Updated nvmlDeviceSetVgpuHeterogeneousMode to return NVML_ERROR_NOT_SUPPORTED when in MIG mode.
- ▶ Updated nvmlDeviceGetVgpuHeterogeneousMode to return NVML_ERROR_NOT_SUPPORTED when in MIG mode.
- ▶ Updated nvmlDeviceGetVgpuTypeCreatablePlacements to return NVML_ERROR_NOT_SUPPORTED when in MIG mode.
- ▶ Updated nvmlDeviceGetVgpuSchedulerLog to return NVML_ERROR_NOT_SUPPORTED when in MIG mode.
- ▶ Updated nvmlDeviceSetVgpuSchedulerState to return NVML_ERROR_NOT_SUPPORTED when in MIG mode.
- ▶ Updated nvmlDeviceGetVgpuSchedulerState to return NVML_ERROR_NOT_SUPPORTED when in MIG mode.
- ▶ Added 3 new **NVML_FI_DEV_C2C_LINK_ERROR** field IDs:
 - ▶ NVML_FI_DEV_C2C_LINK_ERROR_INTR
 - ▶ NVML_FI_DEV_C2C_LINK_ERROR_REPLAY
 - ▶ NVML_FI_DEV_C2C_LINK_ERROR_REPLAY_B2B
- ▶ Added NVML_FI_DEV_C2C_LINK_POWER_STATE field ID.
- ▶ Added new CTXSW GPM Metrics.
- ▶ Added nvmlDeviceGetHandleByUUIDV that supports both ASCII and binary format UUID to retrieve the device handle.
- ▶ Added 2 new **NVML_FI_DEV_POWER_SYNC_BALANCING** field IDs:
 - ▶ NVML_FI_DEV_POWER_SYNC_BALANCING_FREQ
 - ▶ NVML_FI_DEV_POWER_SYNC_BALANCING_AF
- ▶ Added 5 new Clock Event Reason Counters field IDs:
 - ▶ NVML_FI_DEV_CLOCKS_EVENT_REASON_SW_POWER_CAP
 - ▶ NVML_FI_DEV_CLOCKS_EVENT_REASON_SYNC_BOOST
 - ▶ NVML_FI_DEV_CLOCKS_EVENT_REASON_SW_THERM_SLOWDOWN
 - ▶ NVML_FI_DEV_CLOCKS_EVENT_REASON_HW_THERM_SLOWDOWN
 - ▶ NVML_FI_DEV_CLOCKS_EVENT_REASON_HW_POWER BRAKE_SLOWDOWN
- ▶ Updated nvmlDeviceGetMemoryErrorCounter to better account for transient vs. permanent errors.
- ▶ Added MIG profiles that can allocate all or none of Decoder, Encoder, JPEG, and OFA engines.

Changes between v565 and v570

The following new functionality is exposed on NVIDIA display drivers version 570 Production or later.

- ▶ Added field values for data related to Power Smoothing
- ▶ Added nvmlDevicePowerSmoothingActivatePresetProfile to activate a specific Preset Profile for Power Smoothing
- ▶ Added nvmlDevicePowerSmoothingSetState to enable/disable the Power Smoothing feature
- ▶ * Added nvmlDevicePowerSmoothingUpdatePresetProfileParam to update parameters to preset profiles for Power Smoothing
- ▶ Added new enums for fieldId NVML_FI_DEV_NVLINK_GET_STATE to expose INACTIVE, ACTIVE, and SLEEP state for a link
- ▶ Added nvmlDeviceGetMarginTemperature to retrieve the thermal margin temperature (distance to nearest slowdown threshold).
- ▶ Added nvmlDeviceGetNvlinkSupportedBwModes to get all supported Nvlink Bandwidth modes
- ▶ Added nvmlDeviceGetNvlinkBwMode to get the current Nvlink Bandwidth mode
- ▶ Added nvmlDeviceSetNvlinkBwMode to set the Nvlink Bandwidth mode
- ▶ Added MIG profiles with support for graphics.
- ▶ Added support for new recovery action - NVML_GPU_RECOVERY_ACTION_DRAIN_AND_RESET
- ▶ Deprecated nvml fieldIds NVML_FI_DEV_RESET_STATUS and NVML_FI_DEV_DRAIN_AND_RESET_STATUS. Use NVML_FI_DEV_GET_GPU_RECOVERY_ACTION instead
- ▶ Added nvmlDeviceGetDramEncryptionMode and nvmlDeviceSetDramEncryptionMode to query and configure DRAM Encryption Mode
- ▶ Added 3 new flags to GPU Fabric Health Mask:
 - ▶ NVML_GPU_FABRIC_HEALTH_MASK_SHIFT_ROUTE_RECOVERY
 - ▶ NVML_GPU_FABRIC_HEALTH_MASK_SHIFT_ROUTE_UNHEALTHY
 - ▶ NVML_GPU_FABRIC_HEALTH_MASK_SHIFT_ACCESS_TIMEOUT_RECOVERY
- ▶ Added new counters for Nvlink5
- ▶ NVML_FI_DEV_NVLINK_COUNT_EFFECTIVE_ERRORS to get sum of the number of errors in each Nvlink packet
- ▶ NVML_FI_DEV_NVLINK_COUNT_EFFECTIVE_BER to get Effective BER for effective errors
- ▶ NVML_FI_DEV_NVLINK_COUNT_FEC_HISTORY_0 to 15 to get count of symbol errors that are corrected
- ▶ Swapped the values of field IDs NVML_FI_DEV_IS_MIG_MODE_INDEPENDENT_MIG_QUERY_CAPABLE and

- NVML_FI_DEV_NVLINK_GET_POWER_THRESHOLD_MAX to fix backwards compatibility with v550.
- ▶ New revision of **nvmlPlatformInfo_t** -- **nvmlPlatformInfo_v2** has been added. In this version the following fields from v1 have been renamed
 - ▶ rackGuid to chassisSerialNumber
 - ▶ chassisPhysicalSlotNumber to slotNumber
 - ▶ computeSlotIndex to trayIndex
 - ▶ nodeIndex to hostId
- ▶ **nvmlPlatformInfo_v1** is deprecated and will be removed in subsequent releases
- ▶ Revert the fix for the issue where PCIe throughput (reported via **nvmlDeviceGetPcieThroughput** and nvidia-smi -q) is 1000 times bigger than its actual value

Changes between v560 and v565

The following new functionality is exposed on NVIDIA display drivers version 565 Production or later.

- ▶ Fixed the ECC error count mismatch between nvidia-smi query output and NVML APIs, nvmlDeviceGetMemoryErrorCounter and nvmlDeviceGetFieldValues.
- ▶ Added new value NVML_CC_SYSTEM_CPU_CAPS_AMD_SNP_VTOM for CC CPU capability reporting.
- ▶ Added nvmlDeviceGetCoolerInfo to retrieve a cooler's control signal characteristics and target that cooler cools.
- ▶ Added new value **NVML_CC_SYSTEM_CPU_CAPS_AMD_SEV_SNP** for CC CPU capability reporting.
- ▶ Added nvmlDeviceGetFanSpeedRPM to report the intended operating speed in rotations per minute (RPM) of the device's specified fan.
- ▶ Added nvmlDeviceGetPerformanceModes to retrieve a performance modes string with all the performance modes defined for this device along with their associated GPU Clock and Memory Clock values.
- ▶ Added nvmlDeviceGetCurrentClockFreqs to retrieve a string with the associated GPU Clock and Memory Clock values for the current pstate.
- ▶ Added nvmlNvlinkVersion_t enum to define NvLink Version.
- ▶ Added nvmlDeviceGetPlatformInfo to retrieve the platform information of a device.
- ▶ Added new event type nvmlEventTypeGpuUnavailableError.
- ▶ Removed support for **nvmlDeviceGetNvLinkCrcLaneErrorCounter**, **nvmlDeviceGetNvLinkEccLaneErrorCounter**, and nvmlDeviceGetNvLinkErrorCounter on Blackwell.
- ▶ Removed support for fieldIds NVML_FI_DEV_NVLINK_ERROR_DL_REPLAY, NVML_FI_DEV_NVLINK_ERROR_DL_RECOVERY, and NVML_FI_DEV_NVLINK_ERROR_DL_CRC on Blackwell.

- ▶ Added nvmlVgpuInstanceStateGetSize to get the vGPU runtime state size.
- ▶ Updated nvmlDeviceGetVgpuTypeSupportedPlacements function to report both Heterogeneous and Homogeneous vGPU placements.
- ▶ Updated nvmlDeviceGetVgpuCapabilities to report the Homogeneous vGPU capability.
- ▶ Added new event type **nvmlEventTypeGpuRecoveryAction**.
- ▶ Added new fieldId to query GPU recovery action NVML_FI_DEV_GET_GPU_RECOVERY_ACTION.
- ▶ Deprecated fieldIds:
 - ▶ NVML_FI_DEV_NVLINK_COUNT_VL15_DROPPED to get Number of VL15 MADs dropped on a link in NVLink5
 - ▶ NVML_FI_DEV_NVLINK_COUNT_RAW_BER_LANE0 to get BER per lane for lane 0
 - ▶ NVML_FI_DEV_NVLINK_COUNT_RAW_BER_LANE1 to get BER per lane for lane 1
 - ▶ NVML_FI_DEV_NVLINK_COUNT_RAW_BER to get BER per link. Sum of all the raw errors per lane/Bits received per link
 - ▶ NVML_FI_DEV_NVLINK_COUNT_EFFECTIVE_ERRORS to get Sum of the number of errors in each Nvlink packet
 - ▶ NVML_FI_DEV_NVLINK_COUNT_EFFECTIVE_BER to get Effective BER for effective errors

Changes between v555 and v560

The following new functionality is exposed on NVIDIA display drivers version 560 Production or later.

- ▶ Added field values **NVML_FI_DEV_PCIE_OUTBOUND_ATOMICS_MASK** and **NVML_FI_DEV_PCIE_INBOUND_ATOMICS_MASK** for **nvmlDeviceGetFieldValues**.
- ▶ Added field IDs **NVML_FI_DEV_RESET_STATUS** and **NVML_FI_DEV_DRAIN_AND_RESET_STATUS** which correspond to the nvidia-smi output.
- ▶ Added **NVML_DEVICE_ARCH_T23X** architecture type.
- ▶ Added nvmlVgpuTypeGetBAR1Info to query the BAR1 information of a vGPU type.
- ▶ Added new event types, **nvmlEventTypeSingleBitEccErrorStorm**, **nvmlEventTypeDramRetirementEvent**, **nvmlEventTypeDramRetirementFailure**, **nvmlEventTypeNonFatalPoisonError** and **nvmlEventTypeFatalPoisonError**.
- ▶ Added nvmlSystemGetDriverBranch to query the driver branch information.

Changes between v550 and v555

The following new functionality is exposed on NVIDIA display drivers version 555 Production or later.

- ▶ Added `nvmlDeviceGetClockOffsets` to query min, max and current clock offset value on a Maxwell and later GPU for a specified clock. Note: `nvmlDeviceGetGpcClkVfOffset`, `nvmlDeviceGetMemClkVfOffset`, `nvmlDeviceGetGpcClkMinMaxVfOffset` and `nvmlDeviceGetMemClkMinMaxVfOffset` will be deprecated in a future release. Use `nvmlDeviceGetClockOffsets` instead.
- ▶ Added `nvmlDeviceSetClockOffsets` to control clock offset value on a Maxwell and later GPU for a specified clock. Note: `nvmlDeviceSetGpcClkVfOffset` and `nvmlDeviceSetMemClkVfOffset` will be deprecated in a future release. Use `nvmlDeviceSetClockOffsets` instead.
- ▶ Added two new field IDs **NVML_FI_DEV_PCIE_COUNT_TX_BYTES** and **NVML_FI_DEV_PCIE_COUNT_RX_BYTES** for `nvmlDeviceGetFieldValues`.
- ▶ Added new API `nvmlDeviceGetCapabilities` with the first capability bit **NVML_DEV_CAP_EGM** for Extended GPU Memory (EGM) capability.
- ▶ Added `multiGpuMode` display on CC enabled system via new API `nvmlSystemGetConfComputeSettings` or "`nvidia-smi conf-compute --get-multigpu-mode`" or "`nvidia-smi conf-compute -mhm`".
- ▶ Added new field ID `NVML_FI_DEV_NVLINK_GET_POWER_THRESHOLD_MAX` to get the Max Nvlink Power Threshold for a device.

Changes between v545 and v550

The following new functionality is exposed on NVIDIA display drivers version 550 Production or later.

- ▶ Added `nvmlDeviceGetNumaNodeId` to query the NUMA node of a GPU.
- ▶ Added new GPM metric ID **NVML_GPM_METRIC_NVOFA_1_UTIL** to `nvmlGpmMetricId_t`.
- ▶ Added new field ID **NVML_FI_DEV_IS_MIG_MODE_INDEPENDENT_MIG_QUERY_CAPABLE**, to check MIG query capable device irrespective of MIG mode.
- ▶ Deprecated `NVML_P2P_CAPS_INDEX_PROP` and added `NVML_P2P_CAPS_INDEX_PCI` to reflect the same P2P capability.
- ▶ Added `nvmlDeviceGetProcessesUtilizationInfo` to retrieve the recent utilization and process ID for all running processes.
- ▶ Added new struct `nvmlProcessesUtilizationInfo_v1_t`, which includes the new utilization of NVJPG and NVOFA.
- ▶ Added `nvmlDeviceGetVgpuInstancesUtilizationInfo` to retrieve the recent utilization for vGPU instances running on a physical GPU.

- ▶ Added `nvmlDeviceGetVgpuProcessesUtilizationInfo` to retrieve the recent utilization for processes running on vGPU instances on a physical GPU.
- ▶ Added `nvmlDeviceSetVgpuHeterogeneousMode` to enable or disable vGPU heterogenous mode for the device.
- ▶ Added `nvmlDeviceGetVgpuHeterogeneousMode` to query the vGPU heterogenous mode for the device.
- ▶ Added `nvmlVgpuInstanceGetPlacementId` to query placement ID of the active vGPU instance.
- ▶ Added `nvmlDeviceGetVgpuTypeSupportedPlacements` to query the supported vGPU placement IDs of a vGPU type.
- ▶ Added `nvmlDeviceGetVgpuTypeCreatablePlacements` to query the creatable vGPU placement IDs of a vGPU type.
- ▶ Added support to display confidential compute protected memory along with **`fb`** and **`bar1`** in **`nvidia-smi pmon`** and **`dmon`** commands.
- ▶ Added `nvmlDeviceGetGpuFabricInfoV` to query GPU Fabric Probe Info for the device.
- ▶ Deprecated **`nvmlDeviceGetGpuFabricInfo`**. This function should not be used, and will be removed in a future release. Use **`nvmlDeviceGetGpuFabricInfoV`** instead.
- ▶ Modified `nvmlDeviceGetGpuInstanceProfileInfo` and
`>nvmlDeviceGetGpuInstancePossiblePlacements_v2` to no longer require MIG being enabled.
- ▶ Added new encoder type **`NVML_ENCODER_QUERY_AV1`** and
`NVML_ENCODER_QUERY_UNKNOWN` to enumeration **`nvmlEncoderType_t`**.
- ▶ Added `nvmlSystemSetConfComputeKeyRotationThresholdInfo` to set confidential compute key rotation threshold.
- ▶ Added `nvmlSystemGetConfComputeKeyRotationThresholdInfo` to query confidential compute key rotation threshold detail.
- ▶ Added `nvmlDeviceSetVgpuCapabilitiesto` set the desirable vGPU capability of a device.

Changes between v535 and v545

The following new functionality is exposed on NVIDIA display drivers version 545 Production or later.

- ▶ Added a new error code **`NVML_ERROR_GPU_NOT_FOUND`** to be returned if no supported GPUS are found during initialization.
- ▶ In `nvmlGpuFabricInfo_v2_t`, **`partitionId`** has been renamed to **`cliqueId`**.
- ▶ Added new versioned structs **`nvmlGpuInstanceProfileInfo_v3_t`** and **`nvmlComputeInstanceProfileInfo_v3_t`**.
- ▶ Added `nvmlDeviceGetLastBBXFlushTime` for retrieving the timestamp and duration of the latest flush of the BBX object to the inforam storage.
- ▶ Added **`NVML_POWER_SCOPE_MEMORY`** to report out power usage for GPU Memory.

- ▶ Added nvmlDeviceGetPciInfo_v3 which expands **nvmlDeviceGetPciInfo** to also report PCI base and sub classcodes.
- ▶ Added new struct nvmlPciInfoExt_v1_t, which is used in **nvmlDeviceGetPciInfoExt**.
- ▶ Added nvmlDeviceGetRunningProcessDetailList API to get information about Compute, Graphics or MPS-Compute processes running on a GPU with protected memory usage info.

Changes between v530 and v535

The following new functionality is exposed on NVIDIA display drivers version 535 Production or later.

- ▶ Added nvmlDeviceGetSramEccErrorStatus to query SRAM ECC error status for the device.
- ▶ Added nvmlDeviceGetModuleId for getting device module ID.
- ▶ Updated nvmlDeviceGetPowerSource API to report undersized power source.
- ▶ Added nvmlDeviceGetJpgUtilization and nvmlDeviceGetOfaUtilization APIs.
- ▶ Added nvmlSystemGetNvlinkBwMode and nvmlSystemSetNvlinkBwMode APIs.
- ▶ Added nvmlDeviceSetVgpuSchedulerState to set the vGPU scheduler state.
- ▶ Added new field ID NVML_FI_DEV_IS_RESETLESS_MIG_SUPPORTED for device's resetless MIG capability.
- ▶ Added nvmlDeviceGetComputeRunningProcesses_v3 to get information about Compute processes running on a GPU.
- ▶ Added nvmlDeviceGetGraphicsRunningProcesses_v3 to get information about Graphics processes running on a GPU.
- ▶ Added nvmlDeviceGetMPSComputeRunningProcesses_v3 to get information about MPS-Compute processes running on a GPU.
- ▶ Added nvmlDeviceGetRunningProcessDetailList to get information about Compute, Graphics or MPS-Compute processes running on a GPU with protected memory usage info.
- ▶ Added **nvmlDeviceGetLastBBXFlushTime** for retrieving the timestamp and duration of the latest flush of the BBX object to the inforam storage.
- ▶ Added new field ID NVML_FI_DEV_PCIE_COUNT_CORRECTABLE_ERRORS for PCIe correctable errors counter.
- ▶ Added new field ID NVML_FI_DEV_PCIE_COUNT_NAKS_RECEIVED for PCIe NAK Receive counter.
- ▶ Added new field ID NVML_FI_DEV_PCIE_COUNT_RECEIVER_ERROR for PCIe receiver error counter.
- ▶ Added new field ID NVML_FI_DEV_PCIE_COUNT_BAD_TLP for PCIe bad TLP counter.
- ▶ Added new field ID NVML_FI_DEV_PCIE_COUNT_NAKS_SENT for NAK Send counter.

- ▶ Added new field ID NVML_FI_DEV_PCIE_COUNT_BAD_DLLP for PCIe bad DLLP counter.
- ▶ Added new field ID NVML_FI_DEV_PCIE_COUNT_NON_FATAL_ERROR for PCIe non fatal error counter.
- ▶ Added new field ID NVML_FI_DEV_PCIE_COUNT_FATAL_ERROR for PCIe fatal error counter.
- ▶ Added new field ID NVML_FI_DEV_PCIE_COUNT_UNSUPPORTED_REQ for PCIe unsupported request counter.
- ▶ Added new field ID NVML_FI_DEV_PCIE_COUNT_LCRC_ERROR for PCIe LCRC error counter.
- ▶ Added new field ID NVML_FI_DEV_PCIE_COUNT_LANE_ERROR for per lane error counter with scope as PCIe lane number.
- ▶ Added `nvmlDeviceGetPowerUsage_v2` to retrieve current power usage.
- ▶ Added `nvmlDeviceGetTotalEnergyConsumption_v2` to get current energy consumption.
- ▶ Added `nvmlDeviceSetPowerManagementLimit_v2` to set the power limit.
- ▶ Added new field IDs, **NVML_FI_GPU_POWER_AVERAGE** and **NVML_FI_GPU_POWER_INSTANT**, to query power usage.
- ▶ Renamed `nvmlDeviceCcuGetStreamState` to `nvmlGpmQueryIfStreamingEnabled` and `nvmlDeviceCcuSetStreamState` to `nvmlGpmSetStreamingEnabled`.
- ▶ Added support to display confidential compute protected memory along with fb and bar1 in `nvidia-smi pmon` and `dmon` commands.
- ▶ Added new field IDs **NVML_FI_DEV_TEMPERATURE_SHUTDOWN_TLIMIT**, **NVML_FI_DEV_TEMPERATURE_SLOWDOWN_TLIMIT**, **NVML_FI_DEV_TEMPERATURE_MEM_MAX_TLIMIT**, and **NVML_FI_DEV_TEMPERATURE_GPU_MAX_TLIMIT** to query temperature thresholds on Ada and later architectures.
- ▶ Introduced **ClockEventReasons** and related APIs which should be used instead of **ClockThrottleReasons**. Deprecated **ClockThrottleReasons**.
- ▶ Added ability to get GPS Temperature Threshold with `nvmlDeviceGetTemperatureThreshold` using the new enum **NVML_TEMPERATURE_THRESHOLD_GPS_CURR**.

Changes between v525 and v530

The following new functionality is exposed on NVIDIA display drivers version 530 Production or later.

- ▶ Fixed a typo in `nvmlGpuP2PStatus_t`: added a new enum entry for **NVML_P2P_STATUS_CHIPSET_NOT_SUPPORTED** with the same numeric value as the existing erroneous entry ("**NVML_P2P_STATUS_CHIPSET_NOT_SUPPORTED**").
- ▶ Added `nvmlDeviceGetVgpuSchedulerLog` to fetch the vGPU software scheduler logs.

- ▶ Added `nvmlDeviceGetVgpuSchedulerState` to fetch the vGPU software scheduler state.
- ▶ Added `nvmlDeviceGetVgpuSchedulerCapabilities` to fetch the vGPU software scheduler capabilities.

Changes between v520 and v525

The following new functionality is exposed on NVIDIA display drivers version 525 Production or later.

- ▶ Added `nvmlDeviceGetPcieAtomicCaps` to report PCIe atomic capabilities.
- ▶ Added `nvmlDeviceCcuGetStreamState` API to report the counter collection unit stream state.
- ▶ Added `nvmlDeviceCcuSetStreamState` API to set the counter collection unit stream state.
- ▶ Removed support for `NVML_FI_DEV_LINK_SPEED_MBPS_L{0..}` field IDs in Hopper. Replaced with `NVML_FI_DEV_NVLINK_GET_SPEED` with scope as link ID.
- ▶ Removed support for `NVML_FI_DEV_NVLINK_CRC_FLIT_ERROR_COUNT{0..}` field IDs in Hopper. Replaced with `NVML_FI_DEV_NVLINK_ERROR_DL_CRC` with scope as link ID.
- ▶ Removed support for `NVML_FI_DEV_NVLINK_REPLAY_ERROR_COUNT_L{0..}` field IDs in Hopper. Replaced with `NVML_FI_DEV_NVLINK_ERROR_DL_REPLAY` with scope as link ID.
- ▶ Removed support for `NVML_FI_DEV_NVLINK_RECOVERY_ERROR_COUNT_{0..}` field IDs in Hopper. Replaced with `NVML_FI_DEV_NVLINK_ERROR_DL_RECOVERY` with scope as link ID.
- ▶ Added new field ID `NVML_FI_DEV_NVLINK_GET_STATE` to get nvlink state.
- ▶ Added new field ID `NVML_FI_DEV_NVLINK_GET_VERSION` to get nvlink version.
- ▶ Added new field ID `NVML_FI_DEV_C2C_LINK_COUNT` to get C2C link count.
- ▶ Added new field ID `NVML_FI_DEV_C2C_LINK_GET_STATUS` to get C2C link status.
- ▶ Added new field ID `NVML_FI_DEV_C2C_LINK_GET_MAX_BW` to get C2C link bandwidth.

Changes between v515 and v520

The following new functionality is exposed on NVIDIA display drivers version 520 Production or later.

- ▶ Added `nvmlDeviceGetMemClkVfOffset` API to report the MemClk VF offset value.
- ▶ Added `nvmlDeviceSetMemClkVfOffset` API to set the MemClk VF offset value.
- ▶ Added `nvmlDeviceGetMemClkMinMaxVfOffset` API to report the Memory clock min and max VF offset that user can set for a specified GPU.

- ▶ Added `nvmlDeviceGetTargetFanSpeed` API to report the intended target speed of the device's specified fan.
- ▶ Added `nvmlDeviceGetGpcClkMinMaxVfOffset` API to report the Graphics clock min and max VF offset that user can set for a specified GPU.
- ▶ Added `nvmlGpmMetricsGet` to calculate GPM metrics from two GPM samples.
- ▶ Added `nvmlGpmSampleFree` to free allocated GPM sample.
- ▶ Added `nvmlGpmSampleAlloc` to allocate a GPM sample.
- ▶ Added `nvmlGpmSampleGet` to retrieve a GPM snapshot.
- ▶ Added `nvmlGpmQueryDeviceSupport` to query whether a device supports GPM
- ▶ Added `nvmlDeviceGetSupportedPowerModes` API to report the GPU's supported power mode mask.
- ▶ Added `nvmlDeviceGetPowerMode` API to report the GPU's current power mode.
- ▶ Added `nvmlDeviceSetPowerMode` API to set the new power mode.
- ▶ Added `nvmlDeviceGetFanControlPolicy_v2` API to report the control policy for a specified GPU fan.
- ▶ Added `nvmlDeviceSetFanControlPolicy` API to set the control policy for a specified GPU fan.

Changes between v510 and v515

The following new functionality is exposed on NVIDIA display drivers version 515 Production or later.

- ▶ Added `nvmlDeviceGetDefaultECCMode` API to report the GPU's default ECC Mode.
- ▶ Added `nvmlDeviceGetPcieSpeed` API to report the GPU's PCIe link speed.
- ▶ Added `nvmlDeviceGetDynamicPstatesInfo` API to report the GPU's P-states information.
- ▶ Added `nvmlDeviceSetFanSpeed_v2` API to set the GPU's fan speed.
- ▶ Added `nvmlDeviceSetDefaultFanSpeed_v2` API to set the GPU's default fan speed.
- ▶ Added `nvmlDeviceGetThermalSettings` API to report the GPU's thermal system information.
- ▶ Added `nvmlDeviceGetMinMaxClockOfPState` API to report the min and max clocks of some clock domain for a given PState.
- ▶ Added `nvmlDeviceGetSupportedPerformanceStates` API to get all supported Performance States (P-States) for the GPU.
- ▶ Added `nvmlDeviceGetGpcClkVfOffset` API to report the GPCCLK VF offset value.
- ▶ Added `nvmlDeviceSetGpcClkVfOffset` API to set the GPCCLK VF offset value.
- ▶ Added `nvmlDeviceGetMinMaxFanSpeed` API to report the min and max fan speed that user can set for a specified GPU fan.

Changes between v495 and v510

The following new functionality is exposed on NVIDIA display drivers version 510 Production or later.

- ▶ Added `nvmlDeviceGetGpuInstanceProfileInfoV` and `nvmlGpuInstanceGetComputeInstanceProfileInfoV` APIs to include the profile name in their output.
- ▶ Added `nvmlDeviceGetMemoryBusWidth` API to report the GPU's Memory Bus Width.
- ▶ Added `nvmlDeviceGetPcieLinkMaxSpeed` API to report the GPU's PCIe Max Speed.
- ▶ Added `nvmlDeviceGetPowerSource` API to report the GPU's power source as AC or battery.
- ▶ Added `nvmlDeviceGetNumFans` API to report the GPU's number of fans.
- ▶ Added `nvmlDeviceGetNumGpuCores` API to report the GPU's number of cores.
- ▶ Added `nvmlDeviceGetMemoryInfo_v2`. The new version accounts separately for system-reserved memory, and includes it in the used memory amount. The previous version of the API reduced the total memory amount by the amount of system-reserved memory.
- ▶ Added `nvmlDeviceGetAdaptiveClockInfoStatus` API to report the status of adaptive clocking for the GPU.

Changes between v465 and v470

The following new functionality is exposed on NVIDIA display drivers version 470 Production or later.

- ▶ Added new MIG GPU instance profile `NVML_GPU_INSTANCE_PROFILE_1_SLICE_REV1`.
- ▶ Added `nvmlDeviceGetGpuInstancePossiblePlacements_v2`. The previous version of the API will not support the profiles with possible placements greater than its total capacity, such as `NVML_GPU_INSTANCE_PROFILE_1_SLICE_REV1`.

Changes between v460 and v465

The following new functionality is exposed on NVIDIA display drivers version 465 Production or later.

- ▶ Added new `NVML_BRAND_*` enumeration values for NVIDIA, NVIDIA_RTX, GEFORCE_RTX, QUADRO_RTX and TITAN_RTX.
- ▶ Updated `nvmlDeviceGetHandleByUUID` to make it MIG-aware.
- ▶ Updated `nvmlDeviceGetUUID` to return MIG UUIDs in the canonical format, 'MIG-UUID'.
- ▶ Updated `nvmlDeviceGetHandleByUUID` to accept both UUID formats, 'MIG-UUID' and 'MIG-GPU UUID/GID/CID'.

- ▶ The nvmlDeviceSetAPIRestriction and nvmlDeviceGetAPIRestriction APIs would no longer support the ability to toggle root-only requirement for nvmlDeviceSetApplicationsClocks and nvmlDeviceResetApplicationsClocks.

Changes between v450 and v460

The following new functionality is exposed on NVIDIA display drivers version 460 Production or later.

- ▶ Added nvmlDeviceCreateGpuInstanceWithPlacement to allow placement specification when creating a new MIG GPU instance.

Changes between v445 and v450

The following new functionality is exposed on NVIDIA display drivers version 450 Production or later.

- ▶ Updated nvmlDeviceGetFanSpeed and nvmlDeviceGetFanSpeed_v2 for allowing fan speeds greater than 100% to be reported.
- ▶ Added nvmlDeviceGetCpuAffinityWithinScope to determine the closest processor(s) within a NUMA node or socket.
- ▶ Added nvmlDeviceGetMemoryAffinity to determine the closest NUMA node(s) within a NUMA node or socket.
- ▶ Added support to query and disable MIG mode on Windows.

Changes between v418 and v445

The following new functionality is exposed on NVIDIA display drivers version 445 Production or later.

- ▶ Added support for the NVIDIA Ampere architecture.
- ▶ Added support for Multi Instance GPU management. Refer to the "Multi Instance GPU Management" section for details.

Changes between v361 and v418

The following new functionality is exposed on NVIDIA display drivers version 418 Production or later.

- ▶ Added support for the Volta and Turing architectures, bug fixes, performance improvements, and new features.

Changes between v349 and v361

The following new functionality is exposed on NVIDIA display drivers version 361 Production or later.

- ▶ Added nvmlDeviceGetBoardPartNumber to return GPU part numbers

- ▶ Removed support for exclusive thread compute mode (Deprecated in 7.5)
- ▶ Added NVML_CLOCK_VIDEO (encoder/decoder) clock type as a supported clock type for nvmlDeviceGetClockInfo and nvmlDeviceGetMaxClockInfo.

Changes between v346 and v349

The following new functionality is exposed on NVIDIA display drivers version 349 Production or later.

- ▶ Added nvmlDeviceGetTopologyCommonAncestor to find the common path between two devices.
- ▶ Added nvmlDeviceGetTopologyNearestGpus to get a set of GPUs given a path level.
- ▶ Added nvmlSystemGetTopologyGpuSet to retrieve a set of GPUs with a given CPU affinity.
- ▶ Discontinued Perl bindings support.
- ▶ Updated nvmlDeviceGetAccountingPids , nvmlDeviceGetAccountingBufferSize and nvmlDeviceGetAccountingStats to report accounting information for both active and terminated processes. The execution time field in nvmlAccountingStats_t structure is populated only when the process is terminated.

Changes between v340 and v346

The following new functionality is exposed on NVIDIA display drivers version 346 Production or later.

- ▶ Added **nvmlDeviceGetGraphicsRunningProcesses_v2** to get information about Graphics Processes running on a device.
- ▶ Added nvmlDeviceGetPcieReplayCounter to get PCI replay counters.
- ▶ Added nvmlDeviceGetPcieThroughput to get PCI utilization information.
- ▶ Discontinued Perl bindings support.

Changes between NVML v331 and v340

The following new functionality is exposed on NVIDIA display drivers version 340 Production or later.

- ▶ Added nvmlDeviceGetSamples to get recent power, utilization and clock samples for the GPU.
- ▶ Added nvmlDeviceGetTemperatureThreshold to get temperature thresholds for the GPU.
- ▶ Added nvmlDeviceGetBrand to get the brand name of the GPU.
- ▶ Added nvmlDeviceGetViolationStatus to get the duration of time during which the device was throttled (lower than requested clocks) due to power or thermal constraints. Violations due to thermal capping is not supported at this time.

- ▶ Added nvmlDeviceGetEncoderUtilization to get the GPU video encoder utilization.
- ▶ Added nvmlDeviceGetDecoderUtilization to get the GPU video decoder utilization.
- ▶ Added nvmlDeviceGetCpuAffinity to get the closest processor(s) affinity to a particular GPU.
- ▶ Added nvmlDeviceSetCpuAffinity to set the affinity of a particular GPU to the closest processor.
- ▶ Added nvmlDeviceClearCpuAffinity to clear the affinity of a particular GPU.
- ▶ Added nvmlDeviceGetBoardId to get a unique boardId for the running system.
- ▶ Added nvmlDeviceGetMultiGpuBoard to get whether the device is on a multiGPU board.
- ▶ Added nvmlDeviceGetAutoBoostedClocksEnabled and nvmlDeviceSetAutoBoostedClocksEnabled for querying and setting the state of auto boosted clocks on supporting hardware.
- ▶ Added nvmlDeviceSetDefaultAutoBoostedClocksEnabled for setting the default state of auto boosted clocks on supporting hardware.

Changes between NVML v5.319 Update and v331

The following new functionality is exposed on NVIDIA display drivers version 331 or later.

- ▶ Added nvmlDeviceGetMinorNumber to get the minor number for the device.
- ▶ Added nvmlDeviceGetBAR1MemoryInfo to get BAR1 total, available and used memory size.
- ▶ Added nvmlDeviceGetBridgeChipInfo to get the information related to bridge chip firmware.
- ▶ Added enforced power limit query API nvmlDeviceGetEnforcedPowerLimit
- ▶ Updated nvmlEventSetWait to return xid event data in case of xid error event.

Changes between NVML v5.319 RC and v5.319 Update

The following new functionality is exposed on NVIDIA display drivers version 319 Update or later.

- ▶ Added nvmlDeviceSetAPIRestriction and nvmlDeviceGetAPIRestriction, with initial ability to toggle root-only requirement for nvmlDeviceSetApplicationsClocks and nvmlDeviceResetApplicationsClocks.

Changes between NVML v4.304 Production and v5.319 RC

The following new functionality is exposed on NVIDIA display drivers version 319 RC or later.

- ▶ Added _v2 versions of nvmlDeviceGetHandleByIndex and nvmlDeviceGetCount that also count devices not accessible by current user

- ▶ nvmlDeviceGetHandleByIndex_v2 (default) can also return NVML_ERROR_NO_PERMISSION
- ▶ Added nvmlInit_v2 and nvmlDeviceGetHandleByIndex_v2 that is safer and thus recommended function for initializing the library
 - ▶ nvmlInit_v2 lazily initializes only requested devices (queried with nvmlDeviceGetHandle*)
 - ▶ nvml.h defines nvmlInit_v2 and nvmlDeviceGetHandleByIndex_v2 as default functions
- ▶ Added nvmlDeviceGetIndex
- ▶ Added NVML_ERROR_GPU_IS_LOST to report GPUs that have fallen off the bus.
 - ▶ All NVML device APIs can return this error code, as a GPU can fall off the bus at any time.
- ▶ Added new class of APIs for gathering process statistics (nvmlAccountingStats)
- ▶ Application Clocks are no longer supported on GPU's from Quadro product line
- ▶ Added APIs to support dynamic page retirement. See nvmlDeviceGetRetiredPages and nvmlDeviceGetRetiredPagesPendingStatus
- ▶ Renamed nvmlClocksThrottleReasonUserDefinedClocks to nvmlClocksThrottleReasonApplicationsClocksSetting. Old name is deprecated and can be removed in one of the next major releases.
- ▶ Added nvmlDeviceGetDisplayActive and updated documentation to clarify how it differs from nvmlDeviceGetDisplayMode

Changes between NVML v4.304 RC and v4.304 Production

The following new functionality is exposed on NVIDIA display drivers version 304 Production or later.

- ▶ Added nvmlDeviceGetGpuOperationMode and nvmlDeviceSetGpuOperationMode.

Changes between NVML v3.295 and v4.304 RC

The following new functionality is exposed on NVIDIA display drivers version 304 RC or later.

- ▶ Added nvmlDeviceGetInforomConfigurationChecksum and nvmlDeviceValidateInforom.
- ▶ Added nvmlDeviceGetDisplayActive and updated documentation to clarify how it differs from nvmlDeviceGetDisplayMode.
- ▶ Added new error return value for initialization failure due to kernel module not receiving interrupts.
- ▶ Added nvmlDeviceSetApplicationsClocks, nvmlDeviceGetApplicationsClock, nvmlDeviceResetApplicationsClocks.

- ▶ Added nvmlDeviceGetSupportedMemoryClocks and nvmlDeviceGetSupportedGraphicsClocks.
- ▶ Added nvmlDeviceGetPowerManagementLimitConstraints, nvmlDeviceGetPowerManagementDefaultLimit and nvmlDeviceSetPowerManagementLimit.
- ▶ Added nvmlDeviceGetInforomImageVersion.
- ▶ Expanded nvmlDeviceGetUUID to support all CUDA capable GPUs.
- ▶ Deprecated nvmlDeviceGetDetailedEccErrors in favor of nvmlDeviceGetMemoryErrorCounter.
- ▶ Added NVML_MEMORY_LOCATION_TEXTURE_MEMORY to support reporting of texture memory error counters.
- ▶ Added nvmlDeviceGetCurrentClocksThrottleReasons and nvmlDeviceGetSupportedClocksThrottleReasons.
- ▶ NVML_CLOCK_SM is now also reported on supported Kepler devices.
- ▶ Dropped support for GT200 based Tesla brand GPUs: C1060, M1060, S1070.

Changes between NVML v2.285 and v3.295

The following new functionality is exposed on NVIDIA display drivers version 295 or later.

- ▶ Deprecated nvmlDeviceGetHandleBySerial in favor of newly added nvmlDeviceGetHandleByUUID.
- ▶ Marked the input parameters of nvmlDeviceGetHandleBySerial, nvmlDeviceGetHandleByUUID and nvmlDeviceGetHandleByPciBusId as const.
- ▶ Added nvmlDeviceOnSameBoard.
- ▶ Added nvmlConstants defines.
- ▶ Added nvmlDeviceGetMaxPcieLinkGeneration, nvmlDeviceGetMaxPcieLinkWidth, nvmlDeviceGetCurrPcieLinkGeneration, nvmlDeviceGetCurrPcieLinkWidth.
- ▶ Format change of nvmlDeviceGetUUID output to match the UUID standard. This function will return a different value.
- ▶ nvmlDeviceGetDetailedEccErrors will report zero for unsupported ECC error counters when a subset of ECC error counters are supported.

Changes between NVML v1.0 and v2.285

The following new functionality is exposed on NVIDIA display drivers version 285 or later.

- ▶ Added possibility to query separately current and pending driver model with nvmlDeviceGetDriverModel.
 - ▶ Fixed error message when querying pending driver model with nvmlDeviceGetDriverModel on non-Admin user account.
 - ▶ Fixed problem when nvmlDeviceGetDisplayMode wouldn't update.

- ▶ Added API `nvmlDeviceGetVbiosVersion` function to report VBIOS version.
- ▶ Added `pciSubSystemId` to `nvmlPciInfo_t` struct.
- ▶ Added API `nvmlErrorString` function to convert error code to string.
- ▶ Updated docs to indicate we support M2075 and C2075.
- ▶ Added API `nvmlSystemGetHicVersion` function to report HIC firmware version.
- ▶ Added NVML versioning support
 - ▶ Functions that changed API and/or size of structs have appended versioning suffix (e.g., `nvmlDeviceGetPciInfo_v2`). Appropriate C defines have been added that map old function names to the newer version of the function.
- ▶ Added support for concurrent library usage by multiple libraries.
- ▶ Added API `nvmlDeviceGetMaxClockInfo` function for reporting device's clock limits.
- ▶ Added new error code `NVML_ERROR_DRIVER_NOT_LOADED` used by `nvmlInit`.
- ▶ Extended `nvmlPciInfo_t` struct with new field: sub system id.
- ▶ Added NVML support on Windows guest account.
- ▶ Changed format of `pciBusId` string (to `XXXX:XX:XX.X`) of `nvmlPciInfo_t`.
- ▶ Parsing of busId in `nvmlDeviceGetHandleByPciBusId` is less restrictive. You can pass `0:2:0.0` or `0000:02:00` and other variations.
- ▶ Added API for events waiting for GPU events (Linux only) see docs of `nvmlEvents`.
- ▶
 - ▶ Added API `nvmlDeviceGetComputeRunningProcesses_v2` and `nvmlSystemGetProcessName` functions for looking up currently running compute applications.
- ▶ Deprecated `nvmlDeviceGetPowerState` in favor of `nvmlDeviceGetPerformanceState`.

Chapter 4. DEPRECATION AND/OR REMOVAL NOTICES

This section lists NVML functions and data structures marked for deprecation and/or removal. Starting with CUDA 13.1, deprecated functions will generate compiler warnings. Removed functions will return the NVML error code **NVML_ERROR_DEPRECATED**.

CUDA 13.0

The following functions are deprecated starting with CUDA 13.0 and will be removed in CUDA 14.0:

- ▶ nvmlDeviceSetApplicationsClocks
- ▶ nvmlDeviceGetApplicationsClock
- ▶ nvmlDeviceGetDefaultApplicationsClock
- ▶ nvmlDeviceResetApplicationsClocks
- ▶ nvmlDeviceGetViolationStatus
- ▶ nvmlVgpuInstanceGetLicenseStatus
- ▶ nvmlDeviceResetNvLinkUtilizationCounter
- ▶ nvmlDeviceFreezeNvLinkUtilizationCounter
- ▶ nvmlDeviceGetNvLinkUtilizationCounter
- ▶ nvmlDeviceGetNvLinkUtilizationControl
- ▶ nvmlDeviceSetNvLinkUtilizationControl
- ▶ nvmlDeviceSetMemClkVfOffset
- ▶ nvmlDeviceSetGpcClkVfOffset
- ▶ nvmlDeviceGetGpuFabricInfo
- ▶ nvmlDeviceGetDetailedEccErrors
- ▶ nvmlDeviceGetPowerManagementMode
- ▶ nvmlDeviceGetPowerState
- ▶ nvmlDeviceGetSupportedClocksThrottleReasons
- ▶ nvmlDeviceGetCurrentClocksThrottleReasons
- ▶ nvmlDeviceGetTemperature

- ▶ `nvmlDeviceGetHandleBySerial`

Deprecated Data Structures

The following data structure is deprecated starting with CUDA 13.0:

- ▶ `nvmlGpuFabricInfo_v2_t`

Chapter 5. MODULES

Here is a list of all modules:

- ▶ Device Structs
- ▶ Device Enums
- ▶ Field Value Enums
- ▶ Unit Structs
- ▶ Accounting Statistics
- ▶ Encoder Structs
- ▶ Frame Buffer Capture Structures
- ▶ Drain State definitions
- ▶ Confidential Computing definitions
- ▶ Fabric definitions
- ▶ Initialization and Cleanup
- ▶ Error reporting
- ▶ Constants
- ▶ System Queries
- ▶ Unit Queries
- ▶ Device Queries
 - ▶ CPU and Memory Affinity
- ▶ Unit Commands
- ▶ Device Commands
- ▶ NvLink Methods
- ▶ Event Handling Methods
 - ▶ Event Types
- ▶ Drain states
- ▶ Field Value Queries
- ▶ vGPU APIs
- ▶ vGPU Management

- ▶ vGPU Migration
- ▶ vGPU Utilization and Accounting
- ▶ Excluded GPU Queries
- ▶ PRM Access
- ▶ Multi Instance GPU Management
- ▶ NVML GPM
 - ▶ GPM Enums
 - ▶ GPM Structs
 - ▶ GPM Functions
- ▶ Power Profile Information
- ▶ Power Smoothing Information
- ▶ vGPU Enums, Constants, Structs
 - ▶ vGPU Enums
 - ▶ vGPU Constants
 - ▶ vGPU Structs
- ▶ NvmlClocksEventReasons

5.1. Device Structs

```
struct nvmlPciInfoExt_v1_t
struct nvmlPciInfo_t
struct nvmlEccErrorCounts_t
struct nvmlUtilization_t
struct nvmlMemory_t
struct nvmlMemory_v2_t
struct nvmlBAR1Memory_t
struct nvmlProcessInfo_v1_t
struct nvmlProcessInfo_t
struct nvmlProcessDetail_v1_t
struct nvmlProcessDetailList_v1_t
struct nvmlC2cModelInfo_v1_t
struct nvmlDeviceAddressingMode_v1_t
struct nvmlRepairStatus_v1_t
struct nvmlRowRemapperHistogramValues_t
struct nvmlNvLinkUtilizationControl_t
struct nvmlBridgeChipInfo_t
struct nvmlBridgeChipHierarchy_t
```

```
union nvmlValue_t
{
    struct nvmlSample_t
    struct nvmlViolationTime_t
    struct nvmlGpuThermalSettings_t
    union nvmlUUIDValue_t
    struct nvmlUUID_v1_t
    struct nvmlPdi_v1_t
} enum nvmlDeviceAddressingModeType_t
```

Enum to represent device addressing mode values

Values

NVML_DEVICE_ADDRESSING_MODE_NONE = 0

No active mode.

NVML_DEVICE_ADDRESSING_MODE_HMM = 1

Heterogeneous Memory Management mode.

NVML_DEVICE_ADDRESSING_MODE_ATS = 2

Address Translation Services mode.

```
enum nvmlBridgeChipType_t
```

Enum to represent type of bridge chip

Values

NVML_BRIDGE_CHIP_PLX = 0

NVML_BRIDGE_CHIP_BRO4 = 1

```
enum nvmlNvLinkUtilizationCountUnits_t
```

Enum to represent the NvLink utilization counter packet units

Values

NVML_NVLINK_COUNTER_UNIT_CYCLES = 0

```
NVML_NVLINK_COUNTER_UNIT_PACKETS = 1
NVML_NVLINK_COUNTER_UNIT_BYTES = 2
NVML_NVLINK_COUNTER_UNIT_RESERVED = 3
NVML_NVLINK_COUNTER_UNIT_COUNT
```

enum nvmlNvLinkUtilizationCountPktTypes_t

Enum to represent the NvLink utilization counter packet types to count **
 this is ONLY applicable with the units as packets or bytes ** as specified in
 nvmlNvLinkUtilizationCountUnits_t ** all packet filter descriptions are target GPU
 centric ** these can be "OR'd" together

Values

```
NVML_NVLINK_COUNTER_PKTFILTER_NOP = 0x1
NVML_NVLINK_COUNTER_PKTFILTER_READ = 0x2
NVML_NVLINK_COUNTER_PKTFILTER_WRITE = 0x4
NVML_NVLINK_COUNTER_PKTFILTER_RATOM = 0x8
NVML_NVLINK_COUNTER_PKTFILTER_NRATOM = 0x10
NVML_NVLINK_COUNTER_PKTFILTER_FLUSH = 0x20
NVML_NVLINK_COUNTER_PKTFILTER_RESPDATA = 0x40
NVML_NVLINK_COUNTER_PKTFILTER_RESPNODATA = 0x80
NVML_NVLINK_COUNTER_PKTFILTER_ALL = 0xFF
```

enum nvmlNvLinkCapability_t

Enum to represent NvLink queryable capabilities

Values

```
NVML_NVLINK_CAP_P2P_SUPPORTED = 0
NVML_NVLINK_CAP_SYSMEM_ACCESS = 1
NVML_NVLINK_CAP_P2P_ATOMICS = 2
NVML_NVLINK_CAP_SYSMEM_ATOMICS = 3
NVML_NVLINK_CAP_SLI_BRIDGE = 4
NVML_NVLINK_CAP_VALID = 5
NVML_NVLINK_CAP_COUNT
```

enum nvmlNvLinkErrorCounter_t

Enum to represent NvLink queryable error counters

Values

```
NVML_NVLINK_ERROR_DL_REPLAY = 0
NVML_NVLINK_ERROR_DL_RECOVERY = 1
```

NVML_NVLINK_ERROR_DL_CRC_FLIT = 2
NVML_NVLINK_ERROR_DL_CRC_DATA = 3
NVML_NVLINK_ERROR_DL_ECC_DATA = 4
NVML_NVLINK_ERROR_COUNT

enum nvmlIntNvLinkDeviceType_t

Enum to represent NvLink's remote device type

Values

NVML_NVLINK_DEVICE_TYPE_GPU = 0x00
NVML_NVLINK_DEVICE_TYPE_IBMNPU = 0x01
NVML_NVLINK_DEVICE_TYPE_SWITCH = 0x02
NVML_NVLINK_DEVICE_TYPE_UNKNOWN = 0xFF

enum nvmlGpuTopologyLevel_t

Represents level relationships within a system between two GPUs The enums are spaced to allow for future relationships

Values

NVML_TOPOLOGY_INTERNAL = 0
NVML_TOPOLOGY_SINGLE = 10
NVML_TOPOLOGY_MULTIPLE = 20
NVML_TOPOLOGY_HOSTBRIDGE = 30
NVML_TOPOLOGY_NODE = 40
NVML_TOPOLOGY_SYSTEM = 50

enum nvmlSamplingType_t

Represents Type of Sampling Event

Values

NVML_TOTAL_POWER_SAMPLES = 0
 To represent total power drawn by GPU.
NVML_GPU_UTILIZATION_SAMPLES = 1
 To represent percent of time during which one or more kernels was executing on the GPU.
NVML_MEMORY_UTILIZATION_SAMPLES = 2
 To represent percent of time during which global (device) memory was being read or written.
NVML_ENC_UTILIZATION_SAMPLES = 3
 To represent percent of time during which NVENC remains busy.

NVML_DEC_UTILIZATION_SAMPLES = 4

To represent percent of time during which NVDEC remains busy.

NVML_PROCESSOR_CLK_SAMPLES = 5

To represent processor clock samples.

NVML_MEMORY_CLK_SAMPLES = 6

To represent memory clock samples.

NVML_MODULE_POWER_SAMPLES = 7

To represent module power samples for total module starting Grace Hopper.

NVML_JPG_UTILIZATION_SAMPLES = 8

To represent percent of time during which NVJPG remains busy.

NVML_OFA_UTILIZATION_SAMPLES = 9

To represent percent of time during which NVOFA remains busy.

NVML_SAMPLINGTYPE_COUNT

enum nvmlPcieUtilCounter_t

Represents the queryable PCIe utilization counters

Values

NVML_PCIE_UTIL_TX_BYTES = 0**NVML_PCIE_UTIL_RX_BYTES = 1****NVML_PCIE_UTIL_COUNT**

enum nvmlValueType_t

Represents the type for sample value returned

Values

NVML_VALUE_TYPE_DOUBLE = 0**NVML_VALUE_TYPE_UNSIGNED_INT = 1****NVML_VALUE_TYPE_UNSIGNED_LONG = 2****NVML_VALUE_TYPE_UNSIGNED_LONG_LONG = 3****NVML_VALUE_TYPE_SIGNED_LONG_LONG = 4****NVML_VALUE_TYPE_SIGNED_INT = 5****NVML_VALUE_TYPE_UNSIGNED_SHORT = 6****NVML_VALUE_TYPE_COUNT**

enum nvmlPerfPolicyType_t

Represents type of perf policy for which violation times can be queried

Values**NVML_PERF_POLICY_POWER = 0**

How long did power violations cause the GPU to be below application clocks.

NVML_PERF_POLICY_THERMAL = 1

How long did thermal violations cause the GPU to be below application clocks.

NVML_PERF_POLICY_SYNC_BOOST = 2

How long did sync boost cause the GPU to be below application clocks.

NVML_PERF_POLICY_BOARD_LIMIT = 3

How long did the board limit cause the GPU to be below application clocks.

NVML_PERF_POLICY_LOW_UTILIZATION = 4

How long did low utilization cause the GPU to be below application clocks.

NVML_PERF_POLICY_RELIABILITY = 5

How long did the board reliability limit cause the GPU to be below application clocks.

NVML_PERF_POLICY_TOTAL_APP_CLOCKS = 10

Total time the GPU was held below application clocks by any limiter (0 - 5 above).

NVML_PERF_POLICY_TOTAL_BASE_CLOCKS = 11

Total time the GPU was held below base clocks.

NVML_PERF_POLICY_COUNT**enum nvmlThermalTarget_t**

Represents the thermal sensor targets

Values**NVML_THERMAL_TARGET_NONE = 0****NVML_THERMAL_TARGET_GPU = 1**

GPU core temperature requires NvPhysicalGpuHandle.

NVML_THERMAL_TARGET_MEMORY = 2

GPU memory temperature requires NvPhysicalGpuHandle.

NVML_THERMAL_TARGET_POWER_SUPPLY = 4

GPU power supply temperature requires NvPhysicalGpuHandle.

NVML_THERMAL_TARGET_BOARD = 8

GPU board ambient temperature requires NvPhysicalGpuHandle.

NVML_THERMAL_TARGET_VCD_BOARD = 9

Visual Computing Device Board temperature requires
NvVisualComputingDeviceHandle.

NVML_THERMAL_TARGET_VCD_INLET = 10

Visual Computing Device Inlet temperature requires
NvVisualComputingDeviceHandle.

NVML_THERMAL_TARGET_VCD_OUTLET = 11

Visual Computing Device Outlet temperature requires
NvVisualComputingDeviceHandle.

NVML_THERMAL_TARGET_ALL = 15
NVML_THERMAL_TARGET_UNKNOWN = -1

enum nvmlThermalController_t

Represents the thermal sensor controllers

Values

NVML_THERMAL_CONTROLLER_NONE = 0
NVML_THERMAL_CONTROLLER_GPU_INTERNAL
NVML_THERMAL_CONTROLLER_ADM1032
NVML_THERMAL_CONTROLLER_AD7461
NVML_THERMAL_CONTROLLER_MAX6649
NVML_THERMAL_CONTROLLER_MAX1617
NVML_THERMAL_CONTROLLER_LM99
NVML_THERMAL_CONTROLLER_LM89
NVML_THERMAL_CONTROLLER_LM64
NVML_THERMAL_CONTROLLER_G781
NVML_THERMAL_CONTROLLER_AD7473
NVML_THERMAL_CONTROLLER_SBMAX6649
NVML_THERMAL_CONTROLLER_VBIOSEVT
NVML_THERMAL_CONTROLLER_OS
NVML_THERMAL_CONTROLLER_NVSYSCON_CANOAS
NVML_THERMAL_CONTROLLER_NVSYSCON_E551
NVML_THERMAL_CONTROLLER_MAX6649R
NVML_THERMAL_CONTROLLER_AD7473S
NVML_THERMAL_CONTROLLER_UNKNOWN = -1

enum nvmlCoolerControl_t

Cooler control type

Values

NVML_THERMAL_COOLER_SIGNAL_NONE = 0
 This cooler has no control signal.
NVML_THERMAL_COOLER_SIGNAL_TOGGLE = 1
 This cooler can only be toggled either ON or OFF (eg a switch).
NVML_THERMAL_COOLER_SIGNAL_VARIABLE = 2
 This cooler's level can be adjusted from some minimum to some maximum (eg a knob).
NVML_THERMAL_COOLER_SIGNAL_COUNT

enum nvmlCoolerTarget_t

Cooler's target

Values

NVML_THERMAL_COOLER_TARGET_NONE = 1<<0

This cooler cools nothing.

NVML_THERMAL_COOLER_TARGET_GPU = 1<<1

This cooler can cool the GPU.

NVML_THERMAL_COOLER_TARGET_MEMORY = 1<<2

This cooler can cool the memory.

NVML_THERMAL_COOLER_TARGET_POWER_SUPPLY = 1<<3

This cooler can cool the power supply.

NVML_THERMAL_COOLER_TARGET_GPU RELATED

= (NVML_THERMAL_COOLER_TARGET_GPU |

NVML_THERMAL_COOLER_TARGET_MEMORY |

NVML_THERMAL_COOLER_TARGET_POWER_SUPPLY)

This cooler cools all of the components related to its target gpu. GPU RELATED = GPU | MEMORY | POWER_SUPPLY.

enum nvmlUUIDType_t

Enum to represent different UUID types

Values

NVML_UUID_TYPE_NONE = 0

Undefined type.

NVML_UUID_TYPE_ASCII = 1

ASCII format type.

NVML_UUID_TYPE_BINARY = 2

Binary format type.

#define NVML_VALUE_NOT_AVAILABLE (-1)

Special constant that some fields take when they are not available. Used when only part of the struct is not available.

Each structure explicitly states when to check for this value.

#define NVML_DEVICE_PCI_BUS_ID_BUFFER_SIZE 32

Buffer size guaranteed to be large enough for pci bus id

```
#define NVML_DEVICE_PCI_BUS_ID_BUFFER_V2_SIZE 16
```

Buffer size guaranteed to be large enough for pci bus id for busIdLegacy

```
#define NVML_DEVICE_PCI_BUS_ID_LEGACY_FMT "%04X:%02X:%02X.0"
```

PCI format string for busIdLegacy

```
#define NVML_DEVICE_PCI_BUS_ID_FMT "%08X:%02X:%02X.0"
```

PCI format string for busId

```
#define NVML_DEVICE_PCI_BUS_ID_FMT_ARGS (pcilInfo)->domain, \ (pcilInfo)->bus, \ (pcilInfo)->device
```

Utility macro for filling the pci bus id format from a `nvmlPciInfo_t`

```
#define nvmlProcessDetailList_v1  
NVML_STRUCT_VERSION(ProcessDetailList, 1)
```

`nvmlProcessDetailList` version

```
#define NVML_NVLINK_MAX_LINKS 18
```

Maximum number of NvLink links supported

```
#define NVML_MAX_PHYSICAL_BRIDGE (128)
```

Maximum limit on Physical Bridges per Board

```
#define NVML_DEVICE_UUID_ASCII_LEN 41
```

UUID length in ASCII format

```
#define NVML_DEVICE_UUID_BINARY_LEN 16
```

UUID length in binary format

5.2. Device Enums

```
struct nvmlDramEncryptionInfo_v1_t
struct nvmlMarginTemperature_v1_t
struct nvmlClkMonFaultInfo_t
struct nvmlClkMonStatus_t
struct nvmlClockOffset_v1_t
struct nvmlFanSpeedInfo_v1_t
struct nvmlDevicePerfModes_v1_t
struct nvmlDeviceCurrentClockFreqs_v1_t
struct nvmlProcessUtilizationSample_t
struct nvmlProcessUtilizationInfo_v1_t
struct nvmlProcessesUtilizationInfo_v1_t
struct nvmlEccSramErrorStatus_v1_t
struct nvmlPlatformInfo_v1_t
struct nvmlPlatformInfo_v2_t
struct nvmlPowerValue_v2_t
enum nvmlEnableState_t
```

Generic enable/disable enum.

Values

NVML_FEATURE_DISABLED = 0

Feature disabled.

NVML_FEATURE_ENABLED = 1

Feature enabled.

enum nvmlBrandType_t

* The Brand of the GPU

Values

NVML_BRAND_UNKNOWN = 0

NVML_BRAND_QUADRO = 1

NVML_BRAND_TESLA = 2

NVML_BRAND_NVS = 3

NVML_BRAND_GRID = 4

NVML_BRAND_GEFORCE = 5

NVML_BRAND_TITAN = 6

NVML_BRAND_NVIDIA_VAPPS = 7

NVML_BRAND_NVIDIA_VPC = 8

NVML_BRAND_NVIDIA_VCS = 9

NVML_BRAND_NVIDIA_VWS = 10

NVML_BRAND_NVIDIA_CLOUD_GAMING = 11

NVML_BRAND_NVIDIA_VGAMING =

NVML_BRAND_NVIDIA_CLOUD_GAMING

NVML_BRAND_QUADRO_RTX = 12

NVML_BRAND_NVIDIA_RTX = 13

NVML_BRAND_NVIDIA = 14

NVML_BRAND_GEFORCE_RTX = 15

NVML_BRAND_TITAN_RTX = 16

NVML_BRAND_COUNT = 18

enum nvmlTemperatureThresholds_t

Temperature thresholds.

Values

NVML_TEMPERATURE_THRESHOLD_SHUTDOWN = 0

NVML_TEMPERATURE_THRESHOLD_SLOWDOWN = 1

NVML_TEMPERATURE_THRESHOLD_MEM_MAX = 2

NVML_TEMPERATURE_THRESHOLD_GPU_MAX = 3

NVML_TEMPERATURE_THRESHOLD_ACOUSTIC_MIN = 4

NVML_TEMPERATURE_THRESHOLD_ACOUSTIC_CURR = 5

NVML_TEMPERATURE_THRESHOLD_ACOUSTIC_MAX = 6

NVML_TEMPERATURE_THRESHOLD_GPS_CURR = 7

NVML_TEMPERATURE_THRESHOLD_COUNT

enum nvmlTemperatureSensors_t

Temperature sensors.

Values

NVML_TEMPERATURE_GPU = 0

Temperature sensor for the GPU die.

NVML_TEMPERATURE_COUNT

enum nvmlComputeMode_t

Compute mode.

NVML_COMPUTEMODE_EXCLUSIVE_PROCESS was added in CUDA 4.0.

Earlier CUDA versions supported a single exclusive mode, which is equivalent to **NVML_COMPUTEMODE_EXCLUSIVE_THREAD** in CUDA 4.0 and beyond.

Values

NVML_COMPUTEMODE_DEFAULT = 0

Default compute mode -- multiple contexts per device.

NVML_COMPUTEMODE_EXCLUSIVE_THREAD = 1

Support Removed.

NVML_COMPUTEMODE_PROHIBITED = 2

Compute-prohibited mode -- no contexts per device.

NVML_COMPUTEMODE_EXCLUSIVE_PROCESS = 3

Compute-exclusive-process mode -- only one context per device, usable from multiple threads at a time.

NVML_COMPUTEMODE_COUNT

enum nvmlMemoryErrorType_t

Memory error types

Values

NVML_MEMORY_ERROR_TYPE_CORRECTED = 0

A memory error that was correctedFor ECC errors, these are single bit errors For Texture memory, these are errors fixed by resend

NVML_MEMORY_ERROR_TYPE_UNCORRECTED = 1

A memory error that was not correctedFor ECC errors, these are double bit errors For Texture memory, these are errors where the resend fails

NVML_MEMORY_ERROR_TYPE_COUNT

Count of memory error types.

enum nvmlNvlinkVersion_t

Represents Nvlink Version

Values

```
NVML_NVLINK_VERSION_INVALID = 0
NVML_NVLINK_VERSION_1_0 = 1
NVML_NVLINK_VERSION_2_0 = 2
NVML_NVLINK_VERSION_2_2 = 3
NVML_NVLINK_VERSION_3_0 = 4
NVML_NVLINK_VERSION_3_1 = 5
NVML_NVLINK_VERSION_4_0 = 6
NVML_NVLINK_VERSION_5_0 = 7
```

enum nvmlEccCounterType_t

ECC counter types.

Note: Volatile counts are reset each time the driver loads. On Windows this is once per boot. On Linux this can be more frequent. On Linux the driver unloads when no active clients exist. If persistence mode is enabled or there is always a driver client active (e.g. X11), then Linux also sees per-boot behavior. If not, volatile counts are reset each time a compute app is run.

Values

```
NVML_VOLATILE_ECC = 0
```

Volatile counts are reset each time the driver loads.

```
NVML_AGGREGATE_ECC = 1
```

Aggregate counts persist across reboots (i.e. for the lifetime of the device).

```
NVML_ECC_COUNTER_TYPE_COUNT
```

Count of memory counter types.

enum nvmlClockType_t

Clock types.

All speeds are in Mhz.

Values

```
NVML_CLOCK_GRAPHICS = 0
```

Graphics clock domain.

```
NVML_CLOCK_SM = 1
```

SM clock domain.

NVML_CLOCK_MEM = 2

Memory clock domain.

NVML_CLOCK_VIDEO = 3

Video encoder/decoder clock domain.

NVML_CLOCK_COUNT

Count of clock types.

enum nvmlClockId_t

Clock Ids. These are used in combination with nvmlClockType_t to specify a single clock value.

Values

NVML_CLOCK_ID_CURRENT = 0

Current actual clock value.

NVML_CLOCK_ID_APP_CLOCK_TARGET = 1

Target application clock. Deprecated, do not use.

NVML_CLOCK_ID_APP_CLOCK_DEFAULT = 2

Default application clock target Deprecated, do not use.

NVML_CLOCK_ID_CUSTOMER_BOOST_MAX = 3

OEM-defined maximum clock rate.

NVML_CLOCK_ID_COUNT

Count of Clock Ids.

enum nvmlDriverModel_t

Driver models.

Windows only.

Values

NVML_DRIVER_WDDM = 0

WDDM driver model -- GPU treated as a display device.

NVML_DRIVER_WDM = 1

WDM (TCC) model (deprecated) -- GPU treated as a generic compute device.

NVML_DRIVER_MCDM = 2

MCDM driver model -- GPU treated as a Microsoft compute device.

enum nvmlPstates_t

Allowed PStates.

Values**NVML_PSTATE_0 = 0**

Performance state 0 -- Maximum Performance.

NVML_PSTATE_1 = 1

Performance state 1.

NVML_PSTATE_2 = 2

Performance state 2.

NVML_PSTATE_3 = 3

Performance state 3.

NVML_PSTATE_4 = 4

Performance state 4.

NVML_PSTATE_5 = 5

Performance state 5.

NVML_PSTATE_6 = 6

Performance state 6.

NVML_PSTATE_7 = 7

Performance state 7.

NVML_PSTATE_8 = 8

Performance state 8.

NVML_PSTATE_9 = 9

Performance state 9.

NVML_PSTATE_10 = 10

Performance state 10.

NVML_PSTATE_11 = 11

Performance state 11.

NVML_PSTATE_12 = 12

Performance state 12.

NVML_PSTATE_13 = 13

Performance state 13.

NVML_PSTATE_14 = 14

Performance state 14.

NVML_PSTATE_15 = 15

Performance state 15 -- Minimum Performance.

NVML_PSTATE_UNKNOWN = 32

Unknown performance state.

enum nvmlGpuOperationMode_t

GPU Operation Mode

GOM allows to reduce power usage and optimize GPU throughput by disabling GPU features.

Each GOM is designed to meet specific user needs.

Values**NVML_GOM_ALL_ON = 0**

Everything is enabled and running at full speed.

NVML_GOM_COMPUTE = 1

Designed for running only compute tasks. Graphics operations are not allowed

NVML_GOM_LOW_DP = 2

Designed for running graphics applications that don't require high bandwidth double precision

enum nvmlInforomObject_t

Available infoROM objects.

Values**NVML_INFOROM_OEM = 0**

An object defined by OEM.

NVML_INFOROM_ECC = 1

The ECC object determining the level of ECC support.

NVML_INFOROM_POWER = 2

The power management object.

NVML_INFOROM_DEN = 3

DRAM Encryption object.

NVML_INFOROM_COUNT

This counts the number of infoROM objects the driver knows about.

enum nvmlReturn_t

Return values for NVML API calls.

Values**NVML_SUCCESS = 0**

The operation was successful.

NVML_ERROR_UNINITIALIZED = 1

NVML was not first initialized with nvmlInit().

NVML_ERROR_INVALID_ARGUMENT = 2

A supplied argument is invalid.

NVML_ERROR_NOT_SUPPORTED = 3

The requested operation is not available on target device.

NVML_ERROR_NO_PERMISSION = 4

The current user does not have permission for operation.

NVML_ERROR_ALREADY_INITIALIZED = 5

Deprecated: Multiple initializations are now allowed through ref counting.

NVML_ERROR_NOT_FOUND = 6

A query to find an object was unsuccessful.

NVML_ERROR_INSUFFICIENT_SIZE = 7

An input argument is not large enough.

NVML_ERROR_INSUFFICIENT_POWER = 8

A device's external power cables are not properly attached.

NVML_ERROR_DRIVER_NOT_LOADED = 9

NVIDIA driver is not loaded.

NVML_ERROR_TIMEOUT = 10

User provided timeout passed.

NVML_ERROR_IRQ_ISSUE = 11

NVIDIA Kernel detected an interrupt issue with a GPU.

NVML_ERROR_LIBRARY_NOT_FOUND = 12

NVML Shared Library couldn't be found or loaded.

NVML_ERROR_FUNCTION_NOT_FOUND = 13

Local version of NVML doesn't implement this function.

NVML_ERROR_CORRUPTED_INFOROM = 14

infoROM is corrupted

NVML_ERROR_GPU_IS_LOST = 15

The GPU has fallen off the bus or has otherwise become inaccessible.

NVML_ERROR_RESET_REQUIRED = 16

The GPU requires a reset before it can be used again.

NVML_ERROR_OPERATING_SYSTEM = 17

The GPU control device has been blocked by the operating system/cgroups.

NVML_ERROR_LIB_RM_VERSION_MISMATCH = 18

RM detects a driver/library version mismatch.

NVML_ERROR_IN_USE = 19

An operation cannot be performed because the GPU is currently in use.

NVML_ERROR_MEMORY = 20

Insufficient memory.

NVML_ERROR_NO_DATA = 21

No data.

NVML_ERROR_VGPU_ECC_NOT_SUPPORTED = 22

The requested vgpu operation is not available on target device, becasue ECC is enabled.

NVML_ERROR_INSUFFICIENT_RESOURCES = 23

Ran out of critical resources, other than memory.

NVML_ERROR_FREQ_NOT_SUPPORTED = 24

Ran out of critical resources, other than memory.

NVML_ERROR_ARGUMENT_VERSION_MISMATCH = 25

The provided version is invalid/unsupported.

NVML_ERROR_DEPRECATED = 26

The requested functionality has been deprecated.

NVML_ERROR_NOT_READY = 27

The system is not ready for the request.

NVML_ERROR_GPU_NOT_FOUND = 28

No GPUs were found.

NVML_ERROR_INVALID_STATE = 29

Resource not in correct state to perform requested operation.

NVML_ERROR_RESET_TYPE_NOT_SUPPORTED = 30

Reset not supported for given device/parameters.

NVML_ERROR_UNKNOWN = 999

An internal driver error occurred.

enum nvmlMemoryLocation_t

See [nvmlDeviceGetMemoryErrorCounter](#)

Values

NVML_MEMORY_LOCATION_L1_CACHE = 0

GPU L1 Cache.

NVML_MEMORY_LOCATION_L2_CACHE = 1

GPU L2 Cache.

NVML_MEMORY_LOCATION_DRAM = 2

Turing+ DRAM.

NVML_MEMORY_LOCATION_DEVICE_MEMORY = 2

GPU Device Memory.

NVML_MEMORY_LOCATION_REGISTER_FILE = 3

GPU Register File.

NVML_MEMORY_LOCATION_TEXTURE_MEMORY = 4

GPU Texture Memory.

NVML_MEMORY_LOCATION_TEXTURE_SHM = 5

Shared memory.

NVML_MEMORY_LOCATION_CBU = 6

CBU.

NVML_MEMORY_LOCATION_SRAM = 7

Turing+ SRAM.

NVML_MEMORY_LOCATION_COUNT

This counts the number of memory locations the driver knows about.

enum nvmlPageRetirementCause_t

Causes for page retirement

Values**NVML_PAGE_RETIREMENT_CAUSE_MULTIPLE_SINGLE_BIT_ECC_ERRORS = 0**

Page was retired due to multiple single bit ECC error.

NVML_PAGE_RETIREMENT_CAUSE_DOUBLE_BIT_ECC_ERROR = 1

Page was retired due to double bit ECC error.

NVML_PAGE_RETIREMENT_CAUSE_COUNT**enum nvmlRestrictedAPI_t**

API types that allow changes to default permission restrictions

Values**NVML_RESTRICTED_API_SET_APPLICATION_CLOCKS = 0**

APIs that change application clocks, see nvmlDeviceSetApplicationsClocks and see nvmlDeviceResetApplicationsClocks. Deprecated, keeping definition for backward compatibility.

NVML_RESTRICTED_API_SET_AUTO_BOOSTED_CLOCKS = 1

APIs that enable/disable Auto Boosted clocks see nvmlDeviceSetAutoBoostedClocksEnabled

NVML_RESTRICTED_API_COUNT**enum nvmlGpuUtilizationDomainId_t**

Represents the GPU utilization domains

Values**NVML_GPU_UTILIZATION_DOMAIN_GPU = 0**

Graphics engine domain.

NVML_GPU_UTILIZATION_DOMAIN_FB = 1

Frame buffer domain.

NVML_GPU_UTILIZATION_DOMAIN_VID = 2

Video engine domain.

NVML_GPU_UTILIZATION_DOMAIN_BUS = 3

Bus interface domain.

#define nvmlFlagDefault 0x00

Generic flag used to specify the default behavior of some functions. See description of particular functions for details.

#define nvmlFlagForce 0x01

Generic flag used to force some behavior. See description of particular functions for details.

```
#define MAX_CLK_DOMAINS 32
```

Max Clock Monitors available

```
#define nvmlEccBitType_t nvmlMemoryErrorType_t
```

ECC bit types.

Deprecated See [nvmlMemoryErrorType_t](#) for a more flexible type

```
#define NVML_SINGLE_BIT_ECC  
NVML_MEMORY_ERROR_TYPE_CORRECTED
```

Single bit ECC errors

Deprecated Mapped to [NVML_MEMORY_ERROR_TYPE_CORRECTED](#)

```
#define NVML_DOUBLE_BIT_ECC  
NVML_MEMORY_ERROR_TYPE_UNCORRECTED
```

Double bit ECC errors

Deprecated Mapped to [NVML_MEMORY_ERROR_TYPE_UNCORRECTED](#)

```
#define NVML_POWER_MIZER_MODE_ADAPTIVE 0
```

adjust GPU clocks based on GPU utilization

Device powerMizer modes

```
#define
```

```
NVML_POWER_MIZER_MODE_PREFER_MAXIMUM_PERFORMANCE  
1
```

to the extent that thermal and other constraints allow

raise GPU clocks to favor maximum performance,

```
#define NVML_POWER_MIZER_MODE_AUTO 2
```

PowerMizer mode is driver controlled.

```
#define NVML_POWER_MIZER_MODE_PREFER_CONSISTENT_PERFORMANCE 3
lock to GPU base clocks

#define NVML_DEVICE_HOSTNAME_BUFFER_SIZE 64
Structure to store hostname information

#define NVML_GSP_FIRMWARE_VERSION_BUF_SIZE 0x40
GSP firmware

#define NVML_DEVICE_ARCH_KEPLER 2
Simplified chip architecture

#define NVML_BUS_TYPE_UNKNOWN 0
PCI bus types

#define NVML_FAN_POLICY_TEMPERATURE_CONTINOUS_SW 0
Device Power Modes Device Fan control policy

#define NVML_POWER_SOURCE_AC 0x00000000
Device Power Source

#define NVML_PCIE_LINK_MAX_SPEED_INVALID 0x00000000
Device PCIE link Max Speed

#define NVML_ADAPTIVE_CLOCKING_INFO_STATUS_DISABLED 0x00000000
Adaptive clocking status
```

#define NVML_POWER_SCOPE_GPU 0U

Targets only GPU.

Device Scope - This is useful to retrieve the telemetry at GPU and module (e.g. GPU + CPU) level

#define NVML_POWER_SCOPE_MODULE 1U

Targets the whole module.

#define NVML_POWER_SCOPE_MEMORY 2U

Targets the GPU Memory.

5.3. Field Value Enums

struct nvmlFieldValue_t

#define NVML_FI_DEV_ECC_CURRENT 1

Current ECC mode. 1=Active. 0=Inactive.

Field Identifiers.

All Identifiers pertain to a device. Each ID is only used once and is guaranteed never to change.

#define NVML_FI_DEV_ECC_PENDING 2

Pending ECC mode. 1=Active. 0=Inactive.

#define NVML_FI_DEV_ECC_SBE_VOL_TOTAL 3

Total single bit volatile ECC errors.

#define NVML_FI_DEV_ECC_DBE_VOL_TOTAL 4

Total double bit volatile ECC errors.

#define NVML_FI_DEV_ECC_SBE_AGG_TOTAL 5

Total single bit aggregate (persistent) ECC errors.

#define NVML_FI_DEV_ECC_DBE_AGG_TOTAL 6

Total double bit aggregate (persistent) ECC errors.

#define NVML_FI_DEV_ECC_SBE_VOL_L1 7

L1 cache single bit volatile ECC errors.

#define NVML_FI_DEV_ECC_DBE_VOL_L1 8

L1 cache double bit volatile ECC errors.

#define NVML_FI_DEV_ECC_SBE_VOL_L2 9

L2 cache single bit volatile ECC errors.

#define NVML_FI_DEV_ECC_DBE_VOL_L2 10

L2 cache double bit volatile ECC errors.

#define NVML_FI_DEV_ECC_SBE_VOL_DEV 11

Device memory single bit volatile ECC errors.

#define NVML_FI_DEV_ECC_DBE_VOL_DEV 12

Device memory double bit volatile ECC errors.

#define NVML_FI_DEV_ECC_SBE_VOL_REG 13

Register file single bit volatile ECC errors.

#define NVML_FI_DEV_ECC_DBE_VOL_REG 14

Register file double bit volatile ECC errors.

#define NVML_FI_DEV_ECC_SBE_VOL_TEX 15

Texture memory single bit volatile ECC errors.

#define NVML_FI_DEV_ECC_DBE_VOL_TEX 16

Texture memory double bit volatile ECC errors.

```
#define NVML_FI_DEV_ECC_DBE_VOL_CBU 17
```

CBU double bit volatile ECC errors.

```
#define NVML_FI_DEV_ECC_SBE_AGG_L1 18
```

L1 cache single bit aggregate (persistent) ECC errors.

```
#define NVML_FI_DEV_ECC_DBE_AGG_L1 19
```

L1 cache double bit aggregate (persistent) ECC errors.

```
#define NVML_FI_DEV_ECC_SBE_AGG_L2 20
```

L2 cache single bit aggregate (persistent) ECC errors.

```
#define NVML_FI_DEV_ECC_DBE_AGG_L2 21
```

L2 cache double bit aggregate (persistent) ECC errors.

```
#define NVML_FI_DEV_ECC_SBE_AGG_DEV 22
```

Device memory single bit aggregate (persistent) ECC errors.

```
#define NVML_FI_DEV_ECC_DBE_AGG_DEV 23
```

Device memory double bit aggregate (persistent) ECC errors.

```
#define NVML_FI_DEV_ECC_SBE_AGG_REG 24
```

Register File single bit aggregate (persistent) ECC errors.

```
#define NVML_FI_DEV_ECC_DBE_AGG_REG 25
```

Register File double bit aggregate (persistent) ECC errors.

```
#define NVML_FI_DEV_ECC_SBE_AGG_TEX 26
```

Texture memory single bit aggregate (persistent) ECC errors.

```
#define NVML_FI_DEV_ECC_DBE_AGG_TEX 27
```

Texture memory double bit aggregate (persistent) ECC errors.

#define NVML_FI_DEV_ECC_DBE_AGG_CBU 28

CBU double bit aggregate ECC errors.

#define NVML_FI_DEV_RETIRED_SBE 29

Number of retired pages because of single bit errors.

#define NVML_FI_DEV_RETIRED_DBE 30

Number of retired pages because of double bit errors.

#define NVML_FI_DEV_RETIRED_PENDING 31

If any pages are pending retirement. 1=yes. 0=no.

#define

NVML_FI_DEV_NVLINK_CRC_FLIT_ERROR_COUNT_L0 32

NVLink flow control CRC Error Counter for Lane 0.

NVLink Flit Error Counters

Link ID needs to be specified in the scopeId field in [nvmlFieldValue_t](#).

#define

NVML_FI_DEV_NVLINK_CRC_FLIT_ERROR_COUNT_L1 33

NVLink flow control CRC Error Counter for Lane 1.

#define

NVML_FI_DEV_NVLINK_CRC_FLIT_ERROR_COUNT_L2 34

NVLink flow control CRC Error Counter for Lane 2.

#define

NVML_FI_DEV_NVLINK_CRC_FLIT_ERROR_COUNT_L3 35

NVLink flow control CRC Error Counter for Lane 3.

NVLink Bandwidth Counter for Counter Set 1, Lane 4.

#define NVML_FI_DEV_NVLINK_BANDWIDTH_C1_L5 72

NVLink Bandwidth Counter for Counter Set 1, Lane 5.

#define NVML_FI_DEV_NVLINK_BANDWIDTH_C1_TOTAL

73

NVLink Bandwidth Counter Total for Counter Set 1, All Lanes.

#define NVML_FI_DEV_PERF_POLICY_POWER 74

Perf Policy Counter for Power Policy.

#define NVML_FI_DEV_PERF_POLICY_THERMAL 75

Perf Policy Counter for Thermal Policy.

#define NVML_FI_DEV_PERF_POLICY_SYNC_BOOST 76

Perf Policy Counter for Sync boost Policy.

#define NVML_FI_DEV_PERF_POLICY_BOARD_LIMIT 77

Perf Policy Counter for Board Limit.

#define NVML_FI_DEV_PERF_POLICY_LOW_UTILIZATION

78

Perf Policy Counter for Low GPU Utilization Policy.

#define NVML_FI_DEV_PERF_POLICY_RELIABILITY 79

Perf Policy Counter for Reliability Policy.

```
#define NVML_FI_DEV_PERF_POLICY_TOTAL_APP_CLOCKS 80
Perf Policy Counter for Total App Clock Policy.
```

```
#define NVML_FI_DEV_PERF_POLICY_TOTAL_BASE_CLOCKS 81
Perf Policy Counter for Total Base Clocks Policy.
```

```
#define NVML_FI_DEV_MEMORY_TEMP 82
Memory temperature for the device.
```

```
#define NVML_FI_DEV_TOTAL_ENERGY_CONSUMPTION 83
Total energy consumption for the GPU in mJ since the driver was last reloaded.
```

```
#define NVML_FI_DEV_NVLINK_SPEED_MBPS_L0 84
NVLink Speed in MBps for Link 0.

NVLink Speed
Link ID needs to be specified in the scopeId field in nvmlFieldValue_t.
```

```
#define NVML_FI_DEV_NVLINK_SPEED_MBPS_L1 85
NVLink Speed in MBps for Link 1.
```

```
#define NVML_FI_DEV_NVLINK_SPEED_MBPS_L2 86
NVLink Speed in MBps for Link 2.
```

```
#define NVML_FI_DEV_NVLINK_SPEED_MBPS_L3 87
NVLink Speed in MBps for Link 3.
```

```
#define NVML_FI_DEV_NVLINK_SPEED_MBPS_L4 88
NVLink Speed in MBps for Link 4.
```

```
#define NVML_FI_DEV_NVLINK_SPEED_MBPS_L5 89
NVLink Speed in MBps for Link 5.
```

#define NVML_FI_DEV_NVLINK_SPEED_MBPS_COMMON 90
Common NVLink Speed in MBps for active links.

#define NVML_FI_DEV_NVLINK_LINK_COUNT 91
Number of NVLinks present on the device.

#define NVML_FI_DEV_RETIRED_PENDING_SBE 92
If any pages are pending retirement due to SBE. 1=yes. 0=no.

#define NVML_FI_DEV_RETIRED_PENDING_DBE 93
If any pages are pending retirement due to DBE. 1=yes. 0=no.

#define NVML_FI_DEV_PCIE_REPLY_COUNTER 94
PCIe replay counter.

**#define
NVML_FI_DEV_PCIE_REPLY_ROLLOVER_COUNTER 95**
PCIe replay rollover counter.

**#define
NVML_FI_DEV_NVLINK_CRC_FLIT_ERROR_COUNT_L6 96**
NVLink flow control CRC Error Counter for Lane 6.
NVLink Flit Error Counters
Link ID needs to be specified in the scopeId field in `nvmFieldValue_t`.

**#define
NVML_FI_DEV_NVLINK_CRC_FLIT_ERROR_COUNT_L7 97**
NVLink flow control CRC Error Counter for Lane 7.

**#define
NVML_FI_DEV_NVLINK_CRC_FLIT_ERROR_COUNT_L8 98**
NVLink flow control CRC Error Counter for Lane 8.

```
#define  
NVML_FI_DEV_NVLINK_CRC_FLIT_ERROR_COUNT_L9 99  
NVLink flow control CRC Error Counter for Lane 9.
```

```
#define  
NVML_FI_DEV_NVLINK_CRC_FLIT_ERROR_COUNT_L10  
100
```

NVLink flow control CRC Error Counter for Lane 10.

```
#define  
NVML_FI_DEV_NVLINK_CRC_FLIT_ERROR_COUNT_L11  
101
```

NVLink flow control CRC Error Counter for Lane 11.

```
#define  
NVML_FI_DEV_NVLINK_CRC_DATA_ERROR_COUNT_L6 102  
NVLink data CRC Error Counter for Lane 6.
```

NVLink CRC Data Error Counters

Link ID needs to be specified in the scopeId field in `nvmlFieldValue_t`.

```
#define  
NVML_FI_DEV_NVLINK_CRC_DATA_ERROR_COUNT_L7 103  
NVLink data CRC Error Counter for Lane 7.
```

```
#define  
NVML_FI_DEV_NVLINK_CRC_DATA_ERROR_COUNT_L8 104  
NVLink data CRC Error Counter for Lane 8.
```

```
#define  
NVML_FI_DEV_NVLINK_CRC_DATA_ERROR_COUNT_L9 105  
NVLink data CRC Error Counter for Lane 9.
```

```
#define  
NVML_FI_DEV_NVLINK_CRC_DATA_ERROR_COUNT_L10  
106
```

NVLink data CRC Error Counter for Lane 10.

```
#define  
NVML_FI_DEV_NVLINK_CRC_DATA_ERROR_COUNT_L11  
107
```

NVLink data CRC Error Counter for Lane 11.

```
#define  
NVML_FI_DEV_NVLINK_REPLAY_ERROR_COUNT_L6 108
```

NVLink Replay Error Counter for Lane 6.

NVLink Replay Error Counters

Link ID needs to be specified in the scopeId field in `nvmlFieldValue_t`.

```
#define  
NVML_FI_DEV_NVLINK_REPLAY_ERROR_COUNT_L7 109
```

NVLink Replay Error Counter for Lane 7.

```
#define  
NVML_FI_DEV_NVLINK_REPLAY_ERROR_COUNT_L8 110
```

NVLink Replay Error Counter for Lane 8.

```
#define  
NVML_FI_DEV_NVLINK_REPLAY_ERROR_COUNT_L9 111
```

NVLink Replay Error Counter for Lane 9.

```
#define  
NVML_FI_DEV_NVLINK_REPLAY_ERROR_COUNT_L10 112
```

NVLink Replay Error Counter for Lane 10.

```
#define  
NVML_FI_DEV_NVLINK_REPLAY_ERROR_COUNT_L11 113  
NVLink Replay Error Counter for Lane 11.
```

```
#define  
NVML_FI_DEV_NVLINK_RECOVERY_ERROR_COUNT_L6  
114  
NVLink Recovery Error Counter for Lane 6.  
NVLink Recovery Error Counters  
Link ID needs to be specified in the scopeId field in nvmlFieldValue\_t.
```

```
#define  
NVML_FI_DEV_NVLINK_RECOVERY_ERROR_COUNT_L7  
115  
NVLink Recovery Error Counter for Lane 7.
```

```
#define  
NVML_FI_DEV_NVLINK_RECOVERY_ERROR_COUNT_L8  
116  
NVLink Recovery Error Counter for Lane 8.
```

```
#define  
NVML_FI_DEV_NVLINK_RECOVERY_ERROR_COUNT_L9  
117  
NVLink Recovery Error Counter for Lane 9.
```

```
#define  
NVML_FI_DEV_NVLINK_RECOVERY_ERROR_COUNT_L10  
118  
NVLink Recovery Error Counter for Lane 10.
```

```
#define NVML_FI_DEV_NVLINK_RECOVERY_ERROR_COUNT_L11  
119
```

NVLink Recovery Error Counter for Lane 11.

```
#define NVML_FI_DEV_NVLINK_BANDWIDTH_C0_L6 120
```

NVLink Bandwidth Counter for Counter Set 0, Lane 6.

```
#define NVML_FI_DEV_NVLINK_BANDWIDTH_C0_L7 121
```

NVLink Bandwidth Counter for Counter Set 0, Lane 7.

```
#define NVML_FI_DEV_NVLINK_BANDWIDTH_C0_L8 122
```

NVLink Bandwidth Counter for Counter Set 0, Lane 8.

```
#define NVML_FI_DEV_NVLINK_BANDWIDTH_C0_L9 123
```

NVLink Bandwidth Counter for Counter Set 0, Lane 9.

```
#define NVML_FI_DEV_NVLINK_BANDWIDTH_C0_L10 124
```

NVLink Bandwidth Counter for Counter Set 0, Lane 10.

```
#define NVML_FI_DEV_NVLINK_BANDWIDTH_C0_L11 125
```

NVLink Bandwidth Counter for Counter Set 0, Lane 11.

```
#define NVML_FI_DEV_NVLINK_BANDWIDTH_C1_L6 126
```

NVLink Bandwidth Counter for Counter Set 1, Lane 6.

```
#define NVML_FI_DEV_NVLINK_BANDWIDTH_C1_L7 127
```

NVLink Bandwidth Counter for Counter Set 1, Lane 7.

```
#define NVML_FI_DEV_NVLINK_BANDWIDTH_C1_L8 128
```

NVLink Bandwidth Counter for Counter Set 1, Lane 8.

```
#define NVML_FI_DEV_NVLINK_BANDWIDTH_C1_L9 129
```

NVLink Bandwidth Counter for Counter Set 1, Lane 9.

#define NVML_FI_DEV_NVLINK_BANDWIDTH_C1_L10 130

NVLink Bandwidth Counter for Counter Set 1, Lane 10.

#define NVML_FI_DEV_NVLINK_BANDWIDTH_C1_L11 131

NVLink Bandwidth Counter for Counter Set 1, Lane 11.

#define NVML_FI_DEV_NVLINK_SPEED_MBPS_L6 132

NVLink Speed in MBps for Link 6.

NVLink Speed

Link ID needs to be specified in the scopeId field in `nvmlFieldValue_t`.

#define NVML_FI_DEV_NVLINK_SPEED_MBPS_L7 133

NVLink Speed in MBps for Link 7.

#define NVML_FI_DEV_NVLINK_SPEED_MBPS_L8 134

NVLink Speed in MBps for Link 8.

#define NVML_FI_DEV_NVLINK_SPEED_MBPS_L9 135

NVLink Speed in MBps for Link 9.

#define NVML_FI_DEV_NVLINK_SPEED_MBPS_L10 136

NVLink Speed in MBps for Link 10.

#define NVML_FI_DEV_NVLINK_SPEED_MBPS_L11 137

NVLink Speed in MBps for Link 11.

**#define NVML_FI_DEV_NVLINK_THROUGHPUT_DATA_TX
138**

NVLink TX Data throughput in KiB.

NVLink throughput counters field values

Link ID needs to be specified in the scopeId field in `nvmlFieldValue_t`. A scopeId of `UINT_MAX` returns aggregate value summed up across all links for the specified counter type in `fieldId`.

#define NVML_FI_DEV_NVLINK_THROUGHPUT_DATA_RX 139

NVLink RX Data throughput in KiB.

#define NVML_FI_DEV_NVLINK_THROUGHPUT_RAW_TX 140

NVLink TX Data + protocol overhead in KiB.

#define NVML_FI_DEV_NVLINK_THROUGHPUT_RAW_RX 141

NVLink RX Data + protocol overhead in KiB.

#define NVML_FI_DEV_REMAPPED_COR 142

Number of remapped rows due to correctable errors.

#define NVML_FI_DEV_REMAPPED_UNC 143

Number of remapped rows due to uncorrectable errors.

#define NVML_FI_DEV_REMAPPED_PENDING 144

If any rows are pending remapping. 1=yes 0=no.

#define NVML_FI_DEV_REMAPPED_FAILURE 145

If any rows failed to be remapped 1=yes 0=no.

#define NVML_FI_DEV_NVLINK_REMOTE_NVLINK_ID 146

Remote device NVLink ID.

Remote device NVLink ID

Link ID needs to be specified in the scopeId field in [nvmlFieldValue_t](#).

#define

NVML_FI_DEV_NVSWITCH_CONNECTED_LINK_COUNT 147

Number of NVLinks connected to NVSwitch.

NVSwitch: connected NVLink count

```
#define  
NVML_FI_DEV_NVLINK_ECC_DATA_ERROR_COUNT_L0 148  
NVLink data ECC Error Counter for Link 0.
```

```
#define  
NVML_FI_DEV_NVLINK_ECC_DATA_ERROR_COUNT_L1 149  
NVLink data ECC Error Counter for Link 1.
```

```
#define  
NVML_FI_DEV_NVLINK_ECC_DATA_ERROR_COUNT_L2 150  
NVLink data ECC Error Counter for Link 2.
```

```
#define  
NVML_FI_DEV_NVLINK_ECC_DATA_ERROR_COUNT_L3 151  
NVLink data ECC Error Counter for Link 3.
```

```
#define  
NVML_FI_DEV_NVLINK_ECC_DATA_ERROR_COUNT_L4 152  
NVLink data ECC Error Counter for Link 4.
```

```
#define  
NVML_FI_DEV_NVLINK_ECC_DATA_ERROR_COUNT_L5 153  
NVLink data ECC Error Counter for Link 5.
```

```
#define  
NVML_FI_DEV_NVLINK_ECC_DATA_ERROR_COUNT_L6 154  
NVLink data ECC Error Counter for Link 6.
```

```
#define  
NVML_FI_DEV_NVLINK_ECC_DATA_ERROR_COUNT_L7 155  
NVLink data ECC Error Counter for Link 7.
```

```
#define  
NVML_FI_DEV_NVLINK_ECC_DATA_ERROR_COUNT_L8 156  
NVLink data ECC Error Counter for Link 8.
```

```
#define  
NVML_FI_DEV_NVLINK_ECC_DATA_ERROR_COUNT_L9 157  
NVLink data ECC Error Counter for Link 9.
```

```
#define  
NVML_FI_DEV_NVLINK_ECC_DATA_ERROR_COUNT_L10  
158  
NVLink data ECC Error Counter for Link 10.
```

```
#define  
NVML_FI_DEV_NVLINK_ECC_DATA_ERROR_COUNT_L11  
159  
NVLink data ECC Error Counter for Link 11.
```

```
#define  
NVML_FI_DEV_NVLINK_ECC_DATA_ERROR_COUNT_TOTAL  
160  
NVLink data ECC Error Counter total for all Links.
```

```
#define NVML_FI_DEV_NVLINK_ERROR_DL_REPLAY 161  
NVLink Error Replay
```

Link ID needs to be specified in the scopeId field in `nvmlFieldValue_t`.
NVLink Replay Error Counter This is unsupported for Blackwell+. Please use
`NVML_FI_DEV_NVLINK_COUNT_LINK_RECOVERY_*`

```
#define NVML_FI_DEV_NVLINK_ERROR_DL_RECOVERY  
162
```

NVLink Recovery Error Counter

Link ID needs to be specified in the scopeId field in `nvmlFieldValue_t`. NVLink Recovery Error Counter This is unsupported for Blackwell+ Please use `NVML_FI_DEV_NVLINK_COUNT_LINK_RECOVERY_*`

#define NVML_FI_DEV_NVLINK_ERROR_DL_CRC 163

NVLink Recovery Error CRC Counter

Link ID needs to be specified in the scopeId field in `nvmlFieldValue_t`. NVLink CRC Error Counter This is unsupported for Blackwell+ Please use `NVML_FI_DEV_NVLINK_COUNT_LINK_RECOVERY_*`

#define NVML_FI_DEV_NVLINK_GET_SPEED 164

NVLink Speed in MBps.

NVLink Speed, State and Version field id 164, 165, and 166

Link ID needs to be specified in the scopeId field in `nvmlFieldValue_t`.

#define NVML_FI_DEV_NVLINK_GET_STATE 165

NVLink State - Active,Inactive.

#define NVML_FI_DEV_NVLINK_GET_VERSION 166

NVLink Version.

#define NVML_FI_DEV_NVLINK_GET_POWER_STATE 167

NVLink Power state. 0=HIGH_SPEED 1=LOW_SPEED.

#define NVML_FI_DEV_NVLINK_GET_POWER_THRESHOLD 168

NVLink length of idle period (units can be found from `NVML_FI_DEV_NVLINK_GET_POWER_THRESHOLD_UNITS`) before transitioning links to sleep state

#define NVML_FI_DEV_PCIE_L0_TO_RECOVERY_COUNTER 169

Device PEX error recovery counter.

#define NVML_FI_DEV_C2C_LINK_COUNT 170

Number of C2C Links present on the device.

#define NVML_FI_DEV_C2C_LINK_GET_STATUS 171

C2C Link Status 0=INACTIVE 1=ACTIVE.

#define NVML_FI_DEV_C2C_LINK_GET_MAX_BW 172

C2C Link Speed in MBps for active links.

#define

NVML_FI_DEV_PCIE_COUNT_CORRECTABLE_ERRORS 173

PCIe Correctable Errors Counter.

#define NVML_FI_DEV_PCIE_COUNT_NAKS_RECEIVED 174

PCIe NAK Receive Counter.

**#define NVML_FI_DEV_PCIE_COUNT_RECEIVER_ERROR
175**

PCIe Receiver Error Counter.

#define NVML_FI_DEV_PCIE_COUNT_BAD_TLP 176

PCIe Bad TLP Counter.

#define NVML_FI_DEV_PCIE_COUNT_NAKS_SENT 177

PCIe NAK Send Counter.

#define NVML_FI_DEV_PCIE_COUNT_BAD_DLLP 178

PCIe Bad DLLP Counter.

**#define NVML_FI_DEV_PCIE_COUNT_NON_FATAL_ERROR
179**

PCIe Non Fatal Error Counter.

#define NVML_FI_DEV_PCIE_COUNT_FATAL_ERROR 180

PCIe Fatal Error Counter.

#define NVML_FI_DEV_PCIE_COUNT_UNSUPPORTED_REQ 181

PCIe Unsupported Request Counter.

#define NVML_FI_DEV_PCIE_COUNT_LCRC_ERROR 182

PCIe LCRC Error Counter.

#define NVML_FI_DEV_PCIE_COUNT_LANE_ERROR 183

PCIe Per Lane Error Counter.

#define NVML_FI_DEV_IS_RESETLESS_MIG_SUPPORTED 184

Device's Restless MIG Capability.

#define NVML_FI_DEV_POWER_AVERAGE 185

GPU power averaged over 1 sec interval, supported on Ampere (except GA100) or newer architectures.

Retrieves power usage for this GPU in milliwatts. It is only available if power management mode is supported. See [nvmlDeviceGetPowerManagementMode](#) and [nvmlDeviceGetPowerUsage](#).

scopeId needs to be specified. It signifies: 0 - GPU Only Scope - Metrics for GPU are retrieved 1 - Module scope - Metrics for the module (e.g. CPU + GPU) are retrieved.
Note: CPU here refers to NVIDIA CPU (e.g. Grace). x86 or non-NVIDIA ARM is not supported

#define NVML_FI_DEV_POWER_INSTANT 186

Current GPU power, supported on all architectures.

#define NVML_FI_DEV_POWER_MIN_LIMIT 187

Minimum power limit in milliwatts.

#define NVML_FI_DEV_POWER_MAX_LIMIT 188

Maximum power limit in milliwatts.

#define NVML_FI_DEV_POWER_DEFAULT_LIMIT 189

Default power limit in milliwatts (limit which device boots with).

#define NVML_FI_DEV_POWER_CURRENT_LIMIT 190

Limit currently enforced in milliwatts (This includes other limits set elsewhere. E.g. Out-of-band).

#define NVML_FI_DEV_ENERGY 191

Total energy consumption (in mJ) since the driver was last reloaded. Same as NVML_FI_DEV_TOTAL_ENERGY_CONSUMPTION for the GPU.

#define NVML_FI_DEV_POWER_REQUESTED_LIMIT 192

Power limit requested by NVML or any other userspace client.

#define**NVML_FI_DEV_TEMPERATURE_SHUTDOWN_TLIMIT 193**

T.Limit temperature after which GPU may shut down for HW protection.

GPU T.Limit temperature thresholds in degree Celsius

These fields are supported on Ada and later architectures and supersedes nvmlDeviceGetTemperatureThreshold.

#define**NVML_FI_DEV_TEMPERATURE_SLOWDOWN_TLIMIT 194**

T.Limit temperature after which GPU may begin HW slowdown.

**#define NVML_FI_DEV_TEMPERATURE_MEM_MAX_TLIMIT
195**

T.Limit temperature after which GPU may begin SW slowdown due to memory temperature.

**#define NVML_FI_DEV_TEMPERATURE_GPU_MAX_TLIMIT
196**

T.Limit temperature after which GPU may be throttled below base clock.

```
#define NVML_FI_DEV_PCIE_COUNT_TX_BYTES 197
```

PCIe transmit bytes. Value can be wrapped.

```
#define NVML_FI_DEV_PCIE_COUNT_RX_BYTES 198
```

PCIe receive bytes. Value can be wrapped.

```
#define
```

```
NVML_FI_DEV_IS_MIG_MODE_INDEPENDENT_MIG_QUERY_CAPABLE  
199
```

MIG mode independent, MIG query capable device. 1=yes. 0=no.

```
#define
```

```
NVML_FI_DEV_NVLINK_GET_POWER_THRESHOLD_MAX  
200
```

Max Nvlink Power Threshold. See
NVML_FI_DEV_NVLINK_GET_POWER_THRESHOLD.

```
#define NVML_FI_DEV_NVLINK_COUNT_XMIT_PACKETS  
201
```

Total Tx packets on the link in NVLink5.

NVLink counter field id 201-225

Link ID needs to be specified in the scopeId field in `nvmFieldValue_t`.

```
#define NVML_FI_DEV_NVLINK_COUNT_XMIT_BYTES 202
```

Total Tx bytes on the link in NVLink5.

```
#define NVML_FI_DEV_NVLINK_COUNT_RCV_PACKETS  
203
```

Total Rx packets on the link in NVLink5.

```
#define NVML_FI_DEV_NVLINK_COUNT_RCV_BYTES 204
```

Total Rx bytes on the link in NVLink5.

```
#define NVML_FI_DEV_NVLINK_COUNT_VL15_DROPPED  
205
```

Deprecated, do not use.

```
#define  
NVML_FI_DEV_NVLINK_COUNT_MALFORMED_PACKET_ERRORS  
206
```

Number of packets Rx on a link where packets are malformed.

```
#define  
NVML_FI_DEV_NVLINK_COUNT_BUFFER_OVERRUN_ERRORS  
207
```

Number of packets that were discarded on Rx due to buffer overrun.

```
#define NVML_FI_DEV_NVLINK_COUNT_RCV_ERRORS 208
```

Total number of packets with errors Rx on a link.

```
#define  
NVML_FI_DEV_NVLINK_COUNT_RCV_REMOTE_ERRORS  
209
```

Total number of packets Rx - stomp/EBP marker.

```
#define  
NVML_FI_DEV_NVLINK_COUNT_RCV_GENERAL_ERRORS  
210
```

Total number of packets Rx with header mismatch.

```
#define  
NVML_FI_DEV_NVLINK_COUNT_LOCAL_LINK_INTEGRITY_ERRORS  
211
```

Total number of times that the count of local errors exceeded a threshold.

```
#define NVML_FI_DEV_NVLINK_COUNT_XMIT_DISCARDS  
212
```

Total number of tx error packets that were discarded.

```
#define  
NVML_FI_DEV_NVLINK_COUNT_LINK_RECOVERY_SUCCESSFUL_EVENTS  
213
```

Number of times link went from Up to recovery, succeeded and link came back up.

```
#define  
NVML_FI_DEV_NVLINK_COUNT_LINK_RECOVERY_FAILED_EVENTS  
214
```

Number of times link went from Up to recovery, failed and link was declared down.

```
#define  
NVML_FI_DEV_NVLINK_COUNT_LINK_RECOVERY_EVENTS  
215
```

Number of times link went from Up to recovery, irrespective of the result.

```
#define NVML_FI_DEV_NVLINK_COUNT_RAW_BER_LANE0  
216
```

Deprecated, do not use.

```
#define NVML_FI_DEV_NVLINK_COUNT_RAW_BER_LANE1  
217
```

Deprecated, do not use.

```
#define NVML_FI_DEV_NVLINK_COUNT_RAW_BER 218
```

Deprecated, do not use.

```
#define  
NVML_FI_DEV_NVLINK_COUNT_EFFECTIVE_ERRORS 219
```

Sum of the number of errors in each Nvlink packet.

```
#define NVML_FI_DEV_NVLINK_COUNT_EFFECTIVE_BER  
220
```

Effective BER for effective errors.

NVLink Effective BER

Bit [0:7]: BER Exponent value Bit [8:11]: BER MANTISSA value Use macro
NVML_NVLINK_ERROR_COUNTER_BER_GET to extract the two fields

```
#define NVML_FI_DEV_NVLINK_COUNT_SYMBOL_ERRORS  
221
```

Number of errors in rx symbols.

```
#define NVML_FI_DEV_NVLINK_COUNT_SYMBOL_BER 222
```

BER for symbol errors.

NVLink Symbol BER

Bit [0:7]: BER Exponent value Bit [8:11]: BER MANTISSA value Use macro
NVML_NVLINK_ERROR_COUNTER_BER_GET to extract the two fields

```
#define  
NVML_FI_DEV_NVLINK_GET_POWER_THRESHOLD_MIN  
223
```

Min Nvlink Power Threshold. See
NVML_FI_DEV_NVLINK_GET_POWER_THRESHOLD.

```
#define  
NVML_FI_DEV_NVLINK_GET_POWER_THRESHOLD_UNITS  
224
```

Values are in the form NVML_NVLINK_LOW_POWER_THRESHOLD_UNIT_*.

```
#define  
NVML_FI_DEV_NVLINK_GET_POWER_THRESHOLD_SUPPORTED  
225
```

Determine if Nvlink Power Threshold feature is supported.

#define NVML_FI_DEV_RESET_STATUS 226

Deprecated, do not use (use NVML_FI_DEV_GET_GPU_RECOVERY_ACTION instead).

#define NVML_FI_DEV_DRAIN_AND_RESET_STATUS 227

Deprecated, do not use (use NVML_FI_DEV_GET_GPU_RECOVERY_ACTION instead).

#define NVML_FI_DEV_GET_GPU_RECOVERY_ACTION 230

GPU Recovery action - None/Reset/Reboot/Drain P2P/Drain and Reset.

#define NVML_FI_DEV_C2C_LINK_ERROR_INTR 231

C2C Link CRC Error Counter.

#define NVML_FI_DEV_C2C_LINK_ERROR_REPLY 232

C2C Link Replay Error Counter.

#define NVML_FI_DEV_C2C_LINK_ERROR_REPLY_B2B 233

C2C Link Back to Back Replay Error Counter.

#define NVML_FI_DEV_C2C_LINK_POWER_STATE 234

C2C Link Power state. See NVML_C2C_POWER_STATE_*.

#define NVML_FI_DEV_NVLINK_COUNT_FEC_HISTORY_0 235

Count of symbol errors that are corrected - bin 0.

NVLink counter field id 235-250

Link ID needs to be specified in the scopeId field in [nvmlFieldValue_t](#).

#define NVML_FI_DEV_NVLINK_COUNT_FEC_HISTORY_1 236

Count of symbol errors that are corrected - bin 1.

```
#define NVML_FI_DEV_NVLINK_COUNT_FEC_HISTORY_2  
237
```

Count of symbol errors that are corrected - bin 2.

```
#define NVML_FI_DEV_NVLINK_COUNT_FEC_HISTORY_3  
238
```

Count of symbol errors that are corrected - bin 3.

```
#define NVML_FI_DEV_NVLINK_COUNT_FEC_HISTORY_4  
239
```

Count of symbol errors that are corrected - bin 4.

```
#define NVML_FI_DEV_NVLINK_COUNT_FEC_HISTORY_5  
240
```

Count of symbol errors that are corrected - bin 5.

```
#define NVML_FI_DEV_NVLINK_COUNT_FEC_HISTORY_6  
241
```

Count of symbol errors that are corrected - bin 6.

```
#define NVML_FI_DEV_NVLINK_COUNT_FEC_HISTORY_7  
242
```

Count of symbol errors that are corrected - bin 7.

```
#define NVML_FI_DEV_NVLINK_COUNT_FEC_HISTORY_8  
243
```

Count of symbol errors that are corrected - bin 8.

```
#define NVML_FI_DEV_NVLINK_COUNT_FEC_HISTORY_9  
244
```

Count of symbol errors that are corrected - bin 9.

**#define NVML_FI_DEV_NVLINK_COUNT_FEC_HISTORY_10
245**

Count of symbol errors that are corrected - bin 10.

**#define NVML_FI_DEV_NVLINK_COUNT_FEC_HISTORY_11
246**

Count of symbol errors that are corrected - bin 11.

**#define NVML_FI_DEV_NVLINK_COUNT_FEC_HISTORY_12
247**

Count of symbol errors that are corrected - bin 12.

**#define NVML_FI_DEV_NVLINK_COUNT_FEC_HISTORY_13
248**

Count of symbol errors that are corrected - bin 13.

**#define NVML_FI_DEV_NVLINK_COUNT_FEC_HISTORY_14
249**

Count of symbol errors that are corrected - bin 14.

**#define NVML_FI_DEV_NVLINK_COUNT_FEC_HISTORY_15
250**

Count of symbol errors that are corrected - bin 15.

#define NVML_FI_PWR_SMOOTHING_ENABLED 251

Enablement (0/DISABLED or 1/ENABLED).

#define NVML_FI_PWR_SMOOTHING_PRIV_LVL 252

Current privilege level.

```
#define  
NVML_FI_PWR_SMOOTHING_IMM_RAMP_DOWN_ENABLED  
253
```

Immediate ramp down enablement (0/DISABLED or 1/ENABLED).

```
#define NVML_FI_PWR_SMOOTHING_APPLIED_TMP_CEIL  
254
```

Applied TMP ceiling value in Watts.

```
#define  
NVML_FI_PWR_SMOOTHING_APPLIED_TMP_FLOOR 255
```

Applied TMP floor value in Watts.

```
#define  
NVML_FI_PWR_SMOOTHING_MAX_PERCENT_TMP_FLOOR_SETTING  
256
```

Max % TMP Floor value.

```
#define  
NVML_FI_PWR_SMOOTHING_MIN_PERCENT_TMP_FLOOR_SETTING  
257
```

Min % TMP Floor value.

```
#define  
NVML_FI_PWR_SMOOTHING_HW_CIRCUITRY_PERCENT_LIFETIME_R  
258
```

HW Circuitry % lifetime remaining.

```
#define  
NVML_FI_PWR_SMOOTHING_MAX_NUM_PRESET_PROFILES  
259
```

Max number of preset profiles.

```
#define  
NVML_FI_PWR_SMOOTHING_PROFILE_PERCENT_TMP_FLOOR  
260
```

% TMP floor for a given profile

```
#define  
NVML_FI_PWR_SMOOTHING_PROFILE_RAMP_UP_RATE  
261
```

Ramp up rate in mW/s for a given profile.

```
#define  
NVML_FI_PWR_SMOOTHING_PROFILE_RAMP_DOWN_RATE  
262
```

Ramp down rate in mW/s for a given profile.

```
#define  
NVML_FI_PWR_SMOOTHING_PROFILE_RAMP_DOWN_HYST_VAL  
263
```

Ramp down hysteresis value in ms for a given profile.

```
#define  
NVML_FI_PWR_SMOOTHING_ACTIVE_PRESET_PROFILE  
264
```

Active preset profile number.

```
#define

NVML_NVLINK_POWER_STATES

5.4. Unit Structs

```
struct nvmlHwbcEntry_t
struct nvmlLedState_t
struct nvmlUnitInfo_t
struct nvmlPSUInfo_t
struct nvmlUnitFanInfo_t
struct nvmlUnitFanSpeeds_t
enum nvmlFanState_t
```

Fan state enum.

Values

NVML_FAN_NORMAL = 0

Fan is working properly.

NVML_FAN_FAILED = 1

Fan has failed.

enum nvmlLedColor_t

Led color enum.

Values

NVML_LED_COLOR_GREEN = 0

GREEN, indicates good health.

NVML_LED_COLOR_AMBER = 1

AMBER, indicates problem.

5.5. Accounting Statistics

Set of APIs designed to provide per process information about usage of GPU.

- ▶ All accounting statistics and accounting mode live in nvidia driver and reset to default (Disabled) when driver unloads. It is advised to run with persistence mode enabled.

- ▶ Enabling accounting mode has no negative impact on the GPU performance.

struct nvmlAccountingStats_t

**nvmlReturn_t nvmlDeviceGetAccountingMode
(nvmlDevice_t device, nvmlEnableState_t *mode)**

Parameters

device

The identifier of the target device

mode

Reference in which to return the current accounting mode

Returns

- ▶ NVML_SUCCESS if the mode has been successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or mode are NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Queries the state of per process accounting mode.

For Kepler or newer fully supported devices.

See [nvmlDeviceGetAccountingStats](#) for more details. See
[nvmlDeviceSetAccountingMode](#)

**nvmlReturn_t nvmlDeviceGetAccountingStats
(nvmlDevice_t device, unsigned int pid,
nvmlAccountingStats_t *stats)**

Parameters

device

The identifier of the target device

pid

Process Id of the target process to query stats for

stats

Reference in which to return the process's accounting stats

Returns

- ▶ NVML_SUCCESS if stats have been successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or stats are NULL
- ▶ NVML_ERROR_NOT_FOUND if process stats were not found
- ▶ NVML_ERROR_NOT_SUPPORTED if device doesn't support this feature or accounting mode is disabled or on vGPU host.
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Queries process's accounting stats.

For Kepler or newer fully supported devices.

Accounting stats capture GPU utilization and other statistics across the lifetime of a process. Accounting stats can be queried during life time of the process and after its termination. The time field in [nvmlAccountingStats_t](#) is reported as 0 during the lifetime of the process and updated to actual running time after its termination. Accounting stats are kept in a circular buffer, newly created processes overwrite information about old processes.

See [nvmlAccountingStats_t](#) for description of each returned metric. List of processes that can be queried can be retrieved from [nvmlDeviceGetAccountingPids](#).

- ▶ Accounting Mode needs to be on. See [nvmlDeviceGetAccountingMode](#).
- ▶ Only compute and graphics applications stats can be queried. Monitoring applications stats can't be queried since they don't contribute to GPU utilization.
- ▶ In case of pid collision stats of only the latest process (that terminated last) will be reported

See also:

[nvmlDeviceGetAccountingBufferSize](#)

[nvmlReturn_t nvmlDeviceGetAccountingPids](#)
(nvmlDevice_t device, unsigned int *count, unsigned int *pids)

Parameters

device

The identifier of the target device

count

Reference in which to provide the pids array size, and to return the number of elements ready to be queried

pids

Reference in which to return list of process ids

Returns

- ▶ NVML_SUCCESS if pids were successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or count is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if device doesn't support this feature or accounting mode is disabled or on vGPU host.
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if count is too small (count is set to expected value)
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Queries list of processes that can be queried for accounting stats. The list of processes returned can be in running or terminated state.

For Kepler or newer fully supported devices.

To query the number of processes under Accounting Mode, call this function with *count = 0 and pids=NULL. The return code will be NVML_ERROR_INSUFFICIENT_SIZE with an updated count value indicating the number of processes.

For more details see [nvmlDeviceGetAccountingStats](#).

In case of PID collision some processes might not be accessible before the circular buffer is full.

See also:

[nvmlDeviceGetAccountingBufferSize](#)

**nvmlReturn_t nvmlDeviceGetAccountingBufferSize
(nvmlDevice_t device, unsigned int *bufferSize)**

Parameters**device**

The identifier of the target device

bufferSize

Reference in which to provide the size (in number of elements) of the circular buffer for accounting stats.

Returns

- ▶ NVML_SUCCESS if buffer size was successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or bufferSize is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature or accounting mode is disabled
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Returns the number of processes that the circular buffer with accounting pids can hold.

For Kepler or newer fully supported devices.

This is the maximum number of processes that accounting information will be stored for before information about oldest processes will get overwritten by information about new processes.

See also:

[nvmlDeviceGetAccountingStats](#)

[nvmlDeviceGetAccountingPids](#)

nvmlReturn_t nvmlDeviceSetAccountingMode (nvmlDevice_t device, nvmlEnableState_t mode)

Parameters**device**

The identifier of the target device

mode

The target accounting mode

Returns

- ▶ NVML_SUCCESS if the new mode has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device or mode are invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature

- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to perform this operation
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Enables or disables per process accounting.

For Kepler or newer fully supported devices. Requires root/admin permissions.

- ▶ This setting is not persistent and will default to disabled after driver unloads. Enable persistence mode to be sure the setting doesn't switch off to disabled.
- ▶ Enabling accounting mode has no negative impact on the GPU performance.
- ▶ Disabling accounting clears all accounting pids information.
- ▶ On MIG-enabled GPUs, accounting mode would be set to DISABLED and changing it is not supported.

See [nvmlDeviceGetAccountingMode](#) See [nvmlDeviceGetAccountingStats](#) See [nvmlDeviceClearAccountingPids](#)

nvmlReturn_t nvmlDeviceClearAccountingPids (nvmlDevice_t device)

Parameters

device

The identifier of the target device

Returns

- ▶ NVML_SUCCESS if accounting information has been cleared
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device are invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to perform this operation
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Clears accounting information about all processes that have already terminated.

For Kepler or newer fully supported devices. Requires root/admin permissions.

See `nvmlDeviceGetAccountingMode` See `nvmlDeviceGetAccountingStats` See `nvmlDeviceSetAccountingMode`

5.6. Encoder Structs

`struct nvmlEncoderSessionInfo_t`

`enum nvmlEncoderType_t`

Represents type of encoder for capacity can be queried

Values

`NVML_ENCODER_QUERY_H264 = 0x00`

H264 encoder.

`NVML_ENCODER_QUERY_HEVC = 0x01`

HEVC encoder.

`NVML_ENCODER_QUERY_AV1 = 0x02`

AV1 encoder.

`NVML_ENCODER_QUERY_UNKNOWN = 0xFF`

Unknown encoder.

5.7. Frame Buffer Capture Structures

`struct nvmlFBCStats_t`

`struct nvmlFBCSessionInfo_t`

`enum nvmlFBCSessionType_t`

Represents frame buffer capture session type

Values

`NVML_FBC_SESSION_TYPE_UNKNOWN = 0`

Unknown.

`NVML_FBC_SESSION_TYPE_TOSYS`

ToSys.

NVML_FBC_SESSION_TYPE_CUDA
Cuda.

NVML_FBC_SESSION_TYPE_VID
Vid.

NVML_FBC_SESSION_TYPE_HWENC
HEnc.

**#define NVML_NVFBSESSIONFLAG_DIFFMAP_ENABLED
0x00000001**

Bit specifying differential map state.

**#define
NVML_NVFBSESSIONFLAG_CLASSIFICATIONMAP_ENABLED
0x00000002**

Bit specifying classification map state.

**#define
NVML_NVFBSESSIONFLAG_CAPTURE_WITH_WAIT_NO_WAIT
0x00000004**

Bit specifying if capture was requested as non-blocking call.

**#define
NVML_NVFBSESSIONFLAG_CAPTURE_WITH_WAIT_INFINITE
0x00000008**

Bit specifying if capture was requested as blocking call.

**#define
NVML_NVFBSESSIONFLAG_CAPTURE_WITH_WAIT_TIMEOUT
0x00000010**

Bit specifying if capture was requested as blocking call with timeout period.

5.8. Drain State definitions

enum nvmlDetachGpuState_t

Is the GPU device to be removed from the kernel by nvmlDeviceRemoveGpu()

Values

NVML_DETACH_GPU_KEEP = 0
NVML_DETACH_GPU_REMOVE

enum nvmlPcieLinkState_t

Parent bridge PCIe link state requested by nvmlDeviceRemoveGpu()

Values

NVML_PCIE_LINK_KEEP = 0
NVML_PCIE_LINK_SHUT_DOWN

5.9. Confidential Computing definitions

struct nvmlSystemConfComputeSettings_v1_t

struct nvmlConfComputeMemSizeInfo_t

#define NVML_CC_SYSTEM_CPU_CAPS_NONE 0

Confidential Compute CPU Capabilities values

#define NVML_CC_SYSTEM_GPUS_CC_NOT_CAPABLE 0

```

Fabric Health Mask Width for Incorrect Configuration.

```
#define  
NVML_GPU_FABRIC_HEALTH_SUMMARY_NOT_SUPPORTED_0
```

Fabric Health Summary: Not supported.

Fabric Health

```
#define NVML_GPU_FABRIC_HEALTH_SUMMARY_HEALTHY_1
```

Fabric Health Summary: Healthy.

```
#define  
NVML_GPU_FABRIC_HEALTH_SUMMARY_UNHEALTHY_2
```

Fabric Health Summary: Unhealthy.

```
#define  
NVML_GPU_FABRIC_HEALTH_SUMMARY_LIMITED_CAPACITY_3
```

Fabric Health Summary: Limited Capacity.

```
#define NVML_GPU_FABRIC_HEALTH_GET (((var) >>
NVML_GPU_FABRIC_HEALTH_MASK_SHIFT##type) & \
(NVML_GPU_FABRIC_HEALTH_MASK_WIDTH##type))
```

GPU Fabric Health Status Mask for various fields can be obtained using the below macro. Ex - `NVML_GPU_FABRIC_HEALTH_GET(var, _DEGRADED_BW)`

```
#define NVML_GPU_FABRIC_HEALTH_TEST
(NVML_GPU_FABRIC_HEALTH_GET(var, type) == \
NVML_GPU_FABRIC_HEALTH_MASK##type##val)
```

GPU Fabric Health Status Mask for various fields can be tested using the below macro. Ex - `NVML_GPU_FABRIC_HEALTH_TEST(var, _DEGRADED_BW, _TRUE)`

```
#define nvmlGpuFabricInfo_v2
NVML_STRUCT_VERSION(GpuFabricInfo, 2)
```

Version identifier value for `nvmlGpuFabricInfo_v2_t::version`.

```
#define nvmlGpuFabricInfo_v3
NVML_STRUCT_VERSION(GpuFabricInfo, 3)
```

Version identifier value for `nvmlGpuFabricInfo_v3_t::version`.

5.11. Initialization and Cleanup

This chapter describes the methods that handle NVML initialization and cleanup. It is the user's responsibility to call `nvmlInit_v2()` before calling any other methods, and `nvmlShutdown()` once NVML is no longer being used.

`nvmlReturn_t nvmlInit_v2 (void)`

Returns

- ▶ `NVML_SUCCESS` if NVML has been properly initialized
- ▶ `NVML_ERROR_DRIVER_NOT_LOADED` if NVIDIA driver is not running
- ▶ `NVML_ERROR_NO_PERMISSION` if NVML does not have permission to talk to the driver
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Initialize NVML, but don't initialize any GPUs yet.

- ▶ nvmlInit_v3 introduces a "flags" argument, that allows passing boolean values modifying the behaviour of nvmlInit().
- ▶ In NVML 5.319 new nvmlInit_v2 has replaced nvmlInit_v1" (default in NVML 4.304 and older) that did initialize all GPU devices in the system.

This allows NVML to communicate with a GPU when other GPUs in the system are unstable or in a bad state. When using this API, GPUs are discovered and initialized in nvmlDeviceGetHandleBy* functions instead.

To contrast nvmlInit_v2 with nvmlInit_v1", NVML 4.304 nvmlInit_v1" will fail when any detected GPU is in a bad or unstable state.

For all products.

This method, should be called once before invoking any other methods in the library. A reference count of the number of initializations is maintained. Shutdown only occurs when the reference count reaches zero.

`nvmlReturn_t nvmlInitWithFlags (unsigned int flags)`

Parameters

`flags`

behaviour modifier flags

Returns

- ▶ NVML_SUCCESS if NVML has been properly initialized
- ▶ NVML_ERROR_DRIVER_NOT_LOADED if NVIDIA driver is not running
- ▶ NVML_ERROR_NO_PERMISSION if NVML does not have permission to talk to the driver
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

`nvmlInitWithFlags` is a variant of `nvmlInit()`, that allows passing a set of boolean values modifying the behaviour of `nvmlInit()`. Other than the "flags" parameter it is completely similar to [nvmlInit_v2](#).

For all products.

`nvmlReturn_t nvmlShutdown (void)`

Returns

- ▶ NVML_SUCCESS if NVML has been properly shut down
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Shut down NVML by releasing all GPU resources previously allocated with [nvmlInit_v2\(\)](#).

For all products.

This method should be called after NVML work is done, once for each call to [nvmlInit_v2\(\)](#). A reference count of the number of initializations is maintained. Shutdown only occurs when the reference count reaches zero. For backwards compatibility, no error is reported if [nvmlShutdown\(\)](#) is called more times than [nvmlInit\(\)](#).

`#define NVML_INIT_FLAG_NO_GPUS 1`

Don't fail [nvmlInit\(\)](#) when no GPUs are found.

`#define NVML_INIT_FLAG_NO_ATTACH 2`

Don't attach GPUs.

5.12. Error reporting

This chapter describes helper functions for error reporting routines.

`const DECLDIR char *nvmlErrorString (nvmlReturn_t result)`

Parameters

result

NVML error code to convert

Returns

String representation of the error.

Description

Helper method for converting NVML error codes into readable strings.

For all products.

5.13. Constants

#define NVML_DEVICE_INFOROM_VERSION_BUFFER_SIZE 16

Buffer size guaranteed to be large enough for [nvmlDeviceGetInforomVersion](#) and [nvmlDeviceGetInforomImageVersion](#)

#define NVML_DEVICE_UUID_BUFFER_SIZE 80

Buffer size guaranteed to be large enough for storing GPU identifiers.

#define NVML_DEVICE_UUID_V2_BUFFER_SIZE 96

Buffer size guaranteed to be large enough for [nvmlDeviceGetUUID](#)

#define NVML_DEVICE_PART_NUMBER_BUFFER_SIZE 80

```

Buffer size guaranteed to be large enough for `nvmlDeviceGetVbiosVersion`

5.14. System Queries

This chapter describes the queries that NVML can perform against the local system. These queries are not device-specific.

`struct nvmlSystemDriverBranchInfo_v1_t`

`nvmlReturn_t nvmlSystemGetDriverVersion (char *version, unsigned int length)`

Parameters

`version`

Reference in which to return the version identifier

`length`

The maximum allowed length of the string returned in `version`

Returns

- ▶ `NVML_SUCCESS` if `version` has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if `version` is `NULL`
- ▶ `NVML_ERROR_INSUFFICIENT_SIZE` if `length` is too small

Description

Retrieves the version of the system's graphics driver.

For all products.

The version identifier is an alphanumeric string. It will not exceed 80 characters in length (including the NULL terminator). See `nvmlConstants::NVML_SYSTEM_DRIVER_VERSION_BUFFER_SIZE`.

`nvmlReturn_t nvmlSystemGetNVMLVersion (char *version, unsigned int length)`

Parameters

version

Reference in which to return the version identifier

length

The maximum allowed length of the string returned in version

Returns

- ▶ NVML_SUCCESS if version has been set
- ▶ NVML_ERROR_INVALID_ARGUMENT if version is NULL
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if length is too small

Description

Retrieves the version of the NVML library.

For all products.

The version identifier is an alphanumeric string. It will not exceed 80 characters in length (including the NULL terminator). See [nvmlConstants::NVML_SYSTEM_NVML_VERSION_BUFFER_SIZE](#).

`nvmlReturn_t nvmlSystemGetCudaDriverVersion (int *cudaDriverVersion)`

Parameters

cudaDriverVersion

Reference in which to return the version identifier

Returns

- ▶ NVML_SUCCESS if cudaDriverVersion has been set
- ▶ NVML_ERROR_INVALID_ARGUMENT if cudaDriverVersion is NULL

Description

Retrieves the version of the CUDA driver.

For all products.

The CUDA driver version returned will be retrieved from the currently installed version of CUDA. If the cuda library is not found, this function will return a known supported version number.

nvmlReturn_t nvmlSystemGetCudaDriverVersion_v2 (int *cudaDriverVersion)

Parameters

cudaDriverVersion

Reference in which to return the version identifier

Returns

- ▶ NVML_SUCCESS if cudaDriverVersion has been set
- ▶ NVML_ERROR_INVALID_ARGUMENT if cudaDriverVersion is NULL
- ▶ NVML_ERROR_LIBRARY_NOT_FOUND if libcuda.so.1 or libcuda.dll is not found
- ▶ NVML_ERROR_FUNCTION_NOT_FOUND if cuDriverGetVersion() is not found in the shared library

Description

Retrieves the version of the CUDA driver from the shared library.

For all products.

The returned CUDA driver version by calling cuDriverGetVersion()

nvmlReturn_t nvmlSystemGetProcessName (unsigned int pid, char *name, unsigned int length)

Parameters

pid

The identifier of the process

name

Reference in which to return the process name

length

The maximum allowed length of the string returned in name

Returns

- ▶ NVML_SUCCESS if name has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized

- ▶ NVML_ERROR_INVALID_ARGUMENT if name is NULL or length is 0.
- ▶ NVML_ERROR_NOT_FOUND if process doesn't exists
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to perform this operation
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Gets name of the process with provided process id

For all products.

Returned process name is cropped to provided length. name string is encoded in ANSI.

nvmlReturn_t nvmlSystemGetHicVersion (unsigned int *hwbcCount, nvmlHwbcEntry_t *hwbcEntries)

Parameters

hwbcCount

Size of hwbcEntries array

hwbcEntries

Array holding information about hwbc

Returns

- ▶ NVML_SUCCESS if hwbcCount and hwbcEntries have been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if either hwbcCount or hwbcEntries is NULL
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if hwbcCount indicates that the hwbcEntries array is too small

Description

Retrieves the IDs and firmware versions for any Host Interface Cards (HICs) in the system.

For S-class products.

The hwbcCount argument is expected to be set to the size of the input hwbcEntries array. The HIC must be connected to an S-class system for it to be reported by this function.

`nvmlReturn_t nvmlSystemGetTopologyGpuSet (unsigned int cpuNumber, unsigned int *count, nvmlDevice_t *deviceArray)`

Parameters

cpuNumber

The CPU number

count

When zero, is set to the number of matching GPUs such that deviceArray can be malloc'd. When non-zero, deviceArray will be filled with count number of device handles.

deviceArray

An array of device handles for GPUs found with affinity to cpuNumber

Returns

- ▶ NVML_SUCCESS if deviceArray or count (if initially zero) has been set
- ▶ NVML_ERROR_INVALID_ARGUMENT if cpuNumber, or count is invalid, or deviceArray is NULL with a non-zero count
- ▶ NVML_ERROR_NOT_SUPPORTED if the device or OS does not support this feature
- ▶ NVML_ERROR_UNKNOWN an error has occurred in underlying topology discovery

Description

Retrieve the set of GPUs that have a CPU affinity with the given CPU number For all products. Supported on Linux only.

`nvmlReturn_t nvmlSystemGetDriverBranch (nvmlSystemDriverBranchInfo_t *branchInfo, unsigned int length)`

Parameters

branchInfo

Pointer to the driver branch information structure `nvmlSystemDriverBranchInfo_t`

length

The maximum allowed length of the driver branch string

Returns

- ▶ NVML_SUCCESS successful completion
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if branchInfo is NULL
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if length is too small
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the driver branch of the NVIDIA driver installed on the system.

For all products.

The branch identifier is an alphanumeric string. It will not exceed 80 characters in length (including the NULL terminator). See [nvmlConstants::NVML_SYSTEM_DRIVER_VERSION_BUFFER_SIZE](#).

```
#define NVML_CUDA_DRIVER_VERSION_MAJOR  
((v)/1000)
```

Macros for converting the CUDA driver version number to Major and Minor version numbers.

5.15. Unit Queries

This chapter describes the queries that NVML can perform against each unit. For S-class systems only. In each case the device is identified with an `nvmlUnit_t` handle. This handle is obtained by calling [nvmlUnitGetHandleByIndex\(\)](#).

```
nvmlReturn_t nvmlUnitGetCount (unsigned int  
*unitCount)
```

Parameters**unitCount**

Reference in which to return the number of units

Returns

- ▶ NVML_SUCCESS if unitCount has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if unitCount is NULL
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the number of units in the system.

For S-class products.

nvmlReturn_t nvmlUnitGetHandleByIndex (unsigned int index, nvmlUnit_t *unit)

Parameters**index**

The index of the target unit, ≥ 0 and $< \text{unitCount}$

unit

Reference in which to return the unit handle

Returns

- ▶ NVML_SUCCESS if unit has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if index is invalid or unit is NULL
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Acquire the handle for a particular unit, based on its index.

For S-class products.

Valid indices are derived from the unitCount returned by [nvmlUnitGetCount\(\)](#). For example, if unitCount is 2 the valid indices are 0 and 1, corresponding to UNIT 0 and UNIT 1.

The order in which NVML enumerates units has no guarantees of consistency between reboots.

nvmlReturn_t nvmlUnitGetUnitInfo (nvmlUnit_t unit, nvmlUnitInfo_t *info)

Parameters**unit**

The identifier of the target unit

info

Reference in which to return the unit information

Returns

- ▶ NVML_SUCCESS if info has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if unit is invalid or info is NULL

Description

Retrieves the static information associated with a unit.

For S-class products.

See [nvmlUnitInfo_t](#) for details on available unit info.

nvmlReturn_t nvmlUnitGetLedState (nvmlUnit_t unit, nvmlLedState_t *state)

Parameters**unit**

The identifier of the target unit

state

Reference in which to return the current LED state

Returns

- ▶ NVML_SUCCESS if state has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if unit is invalid or state is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this is not an S-class product
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the LED state associated with this unit.

For S-class products.

See [nvmlLedState_t](#) for details on allowed states.

See also:

[nvmlUnitSetLedState\(\)](#)

`nvmlReturn_t nvmlUnitGetPsuInfo (nvmlUnit_t unit, nvmlPSUInfo_t *psu)`

Parameters

unit

The identifier of the target unit

psu

Reference in which to return the PSU information

Returns

- ▶ NVML_SUCCESS if psu has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if unit is invalid or psu is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this is not an S-class product
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the PSU stats for the unit.

For S-class products.

See [nvmlPSUInfo_t](#) for details on available PSU info.

`nvmlReturn_t nvmlUnitGetTemperature (nvmlUnit_t unit, unsigned int type, unsigned int *temp)`

Parameters

unit

The identifier of the target unit

type

The type of reading to take

temp

Reference in which to return the intake temperature

Returns

- ▶ NVML_SUCCESS if temp has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if unit or type is invalid or temp is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this is not an S-class product

- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the temperature readings for the unit, in degrees C.

For S-class products.

Depending on the product, readings may be available for intake (type=0), exhaust (type=1) and board (type=2).

nvmlReturn_t nvmlUnitGetFanSpeedInfo (nvmlUnit_t unit, nvmlUnitFanSpeeds_t *fanSpeeds)

Parameters

unit

The identifier of the target unit

fanSpeeds

Reference in which to return the fan speed information

Returns

- ▶ NVML_SUCCESS if fanSpeeds has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if unit is invalid or fanSpeeds is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this is not an S-class product
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the fan speed readings for the unit.

For S-class products.

See [nvmlUnitFanSpeeds_t](#) for details on available fan speed info.

nvmlReturn_t nvmlUnitGetDevices (nvmlUnit_t unit, unsigned int *deviceCount, nvmlDevice_t *devices)

Parameters

unit

The identifier of the target unit

deviceCount

Reference in which to provide the devices array size, and to return the number of attached GPU devices

devices

Reference in which to return the references to the attached GPU devices

Returns

- ▶ NVML_SUCCESS if deviceCount and devices have been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if deviceCount indicates that the devices array is too small
- ▶ NVML_ERROR_INVALID_ARGUMENT if unit is invalid, either of deviceCount or devices is NULL
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the set of GPU devices that are attached to the specified unit.

For S-class products.

The deviceCount argument is expected to be set to the size of the input devices array.

5.16. Device Queries

This chapter describes the queries that NVML can perform against each device. In each case the device is identified with an `nvmlDevice_t` handle. This handle is obtained by calling one of `nvmlDeviceGetHandleByIndex_v2()`, `nvmlDeviceGetHandleBySerial()`, `nvmlDeviceGetHandleByPciBusId_v2()`, or `nvmlDeviceGetHandleByUUID()`.

//

struct nvmlTemperature_v1_t

CPU and Memory Affinity

nvmlReturn_t nvmlDeviceGetCount_v2 (unsigned int *deviceCount)

Parameters

deviceCount

Reference in which to return the number of accessible devices

Returns

- ▶ NVML_SUCCESS if deviceCount has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if deviceCount is NULL
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the number of compute devices in the system. A compute device is a single GPU.

For all products.

Note: New nvmlDeviceGetCount_v2 (default in NVML 5.319) returns count of all devices in the system even if nvmlDeviceGetHandleByIndex_v2 returns NVML_ERROR_NO_PERMISSION for such device. Update your code to handle this error, or use NVML 4.304 or older nvml header file. For backward binary compatibility reasons _v1 version of the API is still present in the shared library. Old _v1 version of nvmlDeviceGetCount doesn't count devices that NVML has no permission to talk to.

nvmlReturn_t nvmlDeviceGetAttributes_v2 (nvmlDevice_t device, nvmlDeviceAttributes_t *attributes)

Parameters

device

NVML device handle

attributes

Device attributes

Returns

- ▶ NVML_SUCCESS if device attributes were successfully retrieved
- ▶ NVML_ERROR_INVALID_ARGUMENT if device handle is invalid

- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Get attributes (engine counts etc.) for the given NVML device handle.

This API currently only supports MIG device handles.

For Ampere or newer fully supported devices. Supported on Linux only.

nvmlReturn_t nvmlDeviceGetHandleByIndex_v2 (unsigned int index, nvmlDevice_t *device)

Parameters

index

The index of the target GPU, ≥ 0 and $<$ accessibleDevices

device

Reference in which to return the device handle

Returns

- ▶ NVML_SUCCESS if device has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if index is invalid or device is NULL
- ▶ NVML_ERROR_INSUFFICIENT_POWER if any attached devices have improperly attached external power cables
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to talk to this device
- ▶ NVML_ERROR_IRQ_ISSUE if NVIDIA kernel detected an interrupt issue with the attached GPUs
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Acquire the handle for a particular device, based on its index.

For all products.

Valid indices are derived from the accessibleDevices count returned by [nvmlDeviceGetCount_v2\(\)](#). For example, if accessibleDevices is 2 the valid indices are 0 and 1, corresponding to GPU 0 and GPU 1.

The order in which NVML enumerates devices has no guarantees of consistency between reboots. For that reason it is recommended that devices be looked up by their PCI ids or UUID. See [nvmlDeviceGetHandleByUUID\(\)](#) and [nvmlDeviceGetHandleByPciBusId_v2\(\)](#).

Note: The NVML index may not correlate with other APIs, such as the CUDA device index.

Starting from NVML 5, this API causes NVML to initialize the target GPU NVML may initialize additional GPUs if:

- ▶ The target GPU is an SLI slave

Note: New nvmlDeviceGetCount_v2 (default in NVML 5.319) returns count of all devices in the system even if nvmlDeviceGetHandleByIndex_v2 returns NVML_ERROR_NO_PERMISSION for such device. Update your code to handle this error, or use NVML 4.304 or older nvml header file. For backward binary compatibility reasons _v1 version of the API is still present in the shared library. Old _v1 version of nvmlDeviceGetCount doesn't count devices that NVML has no permission to talk to.

This means that nvmlDeviceGetHandleByIndex_v2 and _v1 can return different devices for the same index. If you don't touch macros that map old (_v1) versions to _v2 versions at the top of the file you don't need to worry about that.

See also:

[nvmlDeviceGetIndex](#)

[nvmlDeviceGetCount](#)

`nvmlReturn_t nvmlDeviceGetHandleBySerial (const char *serial, nvmlDevice_t *device)`

Parameters

serial

The board serial number of the target GPU

device

Reference in which to return the device handle

Returns

- ▶ NVML_SUCCESS if device has been set

- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if serial is invalid, device is NULL or more than one device has the same serial (dual GPU boards)
- ▶ NVML_ERROR_NOT_FOUND if serial does not match a valid device on the system
- ▶ NVML_ERROR_INSUFFICIENT_POWER if any attached devices have improperly attached external power cables
- ▶ NVML_ERROR_IRQ_ISSUE if NVIDIA kernel detected an interrupt issue with the attached GPUs
- ▶ NVML_ERROR_GPU_IS_LOST if any GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Acquire the handle for a particular device, based on its board serial number.

For Fermi or newer fully supported devices.

This number corresponds to the value printed directly on the board, and to the value returned by [nvmlDeviceGetSerial\(\)](#).

Deprecated Since more than one GPU can exist on a single board this function is deprecated in favor of [nvmlDeviceGetHandleByUUID](#). For dual GPU boards this function will return NVML_ERROR_INVALID_ARGUMENT.

Starting from NVML 5, this API causes NVML to initialize the target GPU NVML may initialize additional GPUs as it searches for the target GPU

See also:

[nvmlDeviceGetSerial](#)

[nvmlDeviceGetHandleByUUID](#)

`nvmlReturn_t nvmlDeviceGetHandleByUUID (const char *uuid, nvmlDevice_t *device)`

Parameters

uuid

The UUID of the target GPU or MIG instance

device

Reference in which to return the device handle or MIG device handle

Returns

- ▶ NVML_SUCCESS if device has been set

- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if uuid is invalid or device is null
- ▶ NVML_ERROR_NOT_FOUND if uuid does not match a valid device on the system
- ▶ NVML_ERROR_INSUFFICIENT_POWER if any attached devices have improperly attached external power cables
- ▶ NVML_ERROR_IRQ_ISSUE if NVIDIA kernel detected an interrupt issue with the attached GPUs
- ▶ NVML_ERROR_GPU_IS_LOST if any GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Acquire the handle for a particular device, based on its globally unique immutable UUID (in ASCII format) associated with each device.

For all products.

Starting from NVML 5, this API causes NVML to initialize the target GPU NVML may initialize additional GPUs as it searches for the target GPU

See also:

[nvmlDeviceGetUUID](#)

nvmlReturn_t nvmlDeviceGetHandleByUUIDV (const nvmlUUID_t *uuid, nvmlDevice_t *device)

Parameters

uuid

The UUID of the target GPU or MIG instance

device

Reference in which to return the device handle or MIG device handle

Returns

- ▶ NVML_SUCCESS if device has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if uuid is invalid, device is null or uuid->type is invalid
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH if the provided version is invalid/unsupported
- ▶ NVML_ERROR_NOT_FOUND if uuid does not match a valid device on the system

- ▶ NVML_ERROR_GPU_IS_LOST if any GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Acquire the handle for a particular device, based on its globally unique immutable UUID (in either ASCII or binary format) associated with each device. See [nvmlUUID_v1_t](#) for more information on the UUID struct. The caller must set the appropriate version prior to calling this API.

For all products.

This API causes NVML to initialize the target GPU NVML may initialize additional GPUs as it searches for the target GPU

nvmlReturn_t nvmlDeviceGetHandleByPciBusId_v2 (const char *pciBusId, nvmlDevice_t *device)

Parameters

pciBusId

The PCI bus id of the target GPU Accept the following formats (all numbers in hexadecimal): domain:bus:device.function in format x:x:x.x domain:bus:device in format x:x:x bus:device.function in format x:x.x

device

Reference in which to return the device handle

Returns

- ▶ NVML_SUCCESS if device has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if pciBusId is invalid or device is NULL
- ▶ NVML_ERROR_NOT_FOUND if pciBusId does not match a valid device on the system
- ▶ NVML_ERROR_INSUFFICIENT_POWER if the attached device has improperly attached external power cables
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to talk to this device
- ▶ NVML_ERROR_IRQ_ISSUE if NVIDIA kernel detected an interrupt issue with the attached GPUs
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Acquire the handle for a particular device, based on its PCI bus id.

For all products.

This value corresponds to the `nvmlPciInfo_t::busId` returned by `nvmlDeviceGetPciInfo_v3()`.

Starting from NVML 5, this API causes NVML to initialize the target GPU NVML may initialize additional GPUs if:

- ▶ The target GPU is an SLI slave

NVML 4.304 and older version of `nvmlDeviceGetHandleByPciBusId_v1` returns `NVML_ERROR_NOT_FOUND` instead of `NVML_ERROR_NO_PERMISSION`.

`nvmlReturn_t nvmlDeviceGetName (nvmlDevice_t device, char *name, unsigned int length)`

Parameters

`device`

The identifier of the target device

`name`

Reference in which to return the product name

`length`

The maximum allowed length of the string returned in name

Returns

- ▶ `NVML_SUCCESS` if name has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid, or name is NULL
- ▶ `NVML_ERROR_INSUFFICIENT_SIZE` if length is too small
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the name of this device.

For all products.

The name is an alphanumeric string that denotes a particular product, e.g. Tesla C2070. It will not exceed 96 characters in length (including the NULL terminator). See [nvmlConstants::NVML_DEVICE_NAME_V2_BUFFER_SIZE](#).

When used with MIG device handles the API returns MIG device names which can be used to identify devices based on their attributes.

`nvmlReturn_t nvmlDeviceGetBrand (nvmlDevice_t device, nvmlBrandType_t *type)`

Parameters

device

The identifier of the target device

type

Reference in which to return the product brand type

Returns

- ▶ NVML_SUCCESS if name has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, or type is NULL
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the brand of this device.

For all products.

The type is a member of [nvmlBrandType_t](#) defined above.

`nvmlReturn_t nvmlDeviceGetIndex (nvmlDevice_t device, unsigned int *index)`

Parameters

device

The identifier of the target device

index

Reference in which to return the NVML index of the device

Returns

- ▶ NVML_SUCCESS if index has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, or index is NULL
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the NVML index of this device.

For all products.

Valid indices are derived from the accessibleDevices count returned by [nvmlDeviceGetCount_v2\(\)](#). For example, if accessibleDevices is 2 the valid indices are 0 and 1, corresponding to GPU 0 and GPU 1.

The order in which NVML enumerates devices has no guarantees of consistency between reboots. For that reason it is recommended that devices be looked up by their PCI ids or GPU UUID. See [nvmlDeviceGetHandleByPciBusId_v2\(\)](#) and [nvmlDeviceGetHandleByUUID\(\)](#).

When used with MIG device handles this API returns indices that can be passed to [nvmlDeviceGetMigDeviceHandleByIndex](#) to retrieve an identical handle. MIG device indices are unique within a device.

Note: The NVML index may not correlate with other APIs, such as the CUDA device index.

See also:

[nvmlDeviceGetHandleByIndex\(\)](#)

[nvmlDeviceGetCount\(\)](#)

[nvmlReturn_t nvmlDeviceGetSerial \(nvmlDevice_t device, char *serial, unsigned int length\)](#)

Parameters**device**

The identifier of the target device

serial

Reference in which to return the board/module serial number

length

The maximum allowed length of the string returned in serial

Returns

- ▶ NVML_SUCCESS if serial has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, or serial is NULL
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if length is too small
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the globally unique board serial number associated with this device's board.

For all products with an inforom.

The serial number is an alphanumeric string that will not exceed 30 characters (including the NULL terminator). This number matches the serial number tag that is physically attached to the board. See [nvmlConstants::NVML_DEVICE_SERIAL_BUFFER_SIZE](#).

nvmlReturn_t nvmlDeviceGetModuleId (nvmlDevice_t device, unsigned int *moduleId)

Parameters**device**

The identifier of the target device

moduleId

Unique identifier for the GPU module

Returns

- ▶ NVML_SUCCESS if moduleId has been successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device or moduleId is invalid
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Get a unique identifier for the device module on the baseboard

This API retrieves a unique identifier for each GPU module that exists on a given baseboard. For non-baseboard products, this ID would always be 0.

nvmlReturn_t nvmlDeviceGetC2cModeInfoV (nvmlDevice_t device, nvmlC2cModeInfo_v1_t *c2cModeInfo)

Parameters

device

The identifier of the target device

c2cModeInfo

Output struct containing the device's C2C Mode info

Returns

- ▶ NVML_SUCCESS if C2C Mode Infor query is successful
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, or serial is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the Device's C2C Mode information

nvmlReturn_t nvmlDeviceGetTopologyCommonAncestor (nvmlDevice_t device1, nvmlDevice_t device2, nvmlGpuTopologyLevel_t *pathInfo)

Parameters

device1

The identifier of the first device

device2

The identifier of the second device

pathInfo

A `nvmlGpuTopologyLevel_t` that gives the path type

Returns

- ▶ NVML_SUCCESS if pathInfo has been set
- ▶ NVML_ERROR_INVALID_ARGUMENT if device1, or device2 is invalid, or pathInfo is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device or OS does not support this feature
- ▶ NVML_ERROR_UNKNOWN an error has occurred in underlying topology discovery

Description

Retrieve the common ancestor for two devices For all products. Supported on Linux only.

**nvmlReturn_t nvmlDeviceGetTopologyNearestGpus
(nvmlDevice_t device, nvmlGpuTopologyLevel_t level,
unsigned int *count, nvmlDevice_t *deviceArray)**

Parameters**device**

The identifier of the first device

level

The **nvmlGpuTopologyLevel_t** level to search for other GPUs

count

When zero, is set to the number of matching GPUs such that deviceArray can be malloc'd. When non-zero, deviceArray will be filled with count number of device handles.

deviceArray

An array of device handles for GPUs found at level

Returns

- ▶ NVML_SUCCESS if deviceArray or count (if initially zero) has been set
- ▶ NVML_ERROR_INVALID_ARGUMENT if device, level, or count is invalid, or deviceArray is NULL with a non-zero count
- ▶ NVML_ERROR_NOT_SUPPORTED if the device or OS does not support this feature
- ▶ NVML_ERROR_UNKNOWN an error has occurred in underlying topology discovery

Description

Retrieve the set of GPUs that are nearest to a given device at a specific interconnectivity level For all products. Supported on Linux only.

```
nvmlReturn_t nvmlDeviceGetP2PStatus
(nvmlDevice_t device1, nvmlDevice_t device2,
nvmlGpuP2PCapsIndex_t p2pIndex, nvmlGpuP2PStatus_t
*p2pStatus)
```

Parameters**device1**

The first device

device2

The second device

p2pIndex

p2p Capability Index being looked for between device1 and device2

p2pStatus

Reference in which to return the status of the p2pIndex between device1 and device2

Returns

- ▶ NVML_SUCCESS if p2pStatus has been populated
- ▶ NVML_ERROR_INVALID_ARGUMENT if device1 or device2 or p2pIndex is invalid or p2pStatus is NULL
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the status for a given p2p capability index between a given pair of GPU

```
nvmlReturn_t nvmlDeviceGetUUID (nvmlDevice_t
device, char *uuid, unsigned int length)
```

Parameters**device**

The identifier of the target device

uuid

Reference in which to return the GPU UUID

length

The maximum allowed length of the string returned in `uuid`

Returns

- ▶ `NVML_SUCCESS` if `uuid` has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid, or `uuid` is `NULL`
- ▶ `NVML_ERROR_INSUFFICIENT_SIZE` if `length` is too small
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support this feature
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the globally unique immutable UUID associated with this device, as a 5 part hexadecimal string, that augments the immutable, board serial identifier.

For all products.

The UUID is a globally unique identifier. It is the only available identifier for pre-Fermi-architecture products. It does NOT correspond to any identifier printed on the board. It will not exceed 96 characters in length (including the `NULL` terminator). See [nvmlConstants::NVML_DEVICE_UUID_V2_BUFFER_SIZE](#).

When used with MIG device handles the API returns globally unique UUIDs which can be used to identify MIG devices across both GPU and MIG devices. UUIDs are immutable for the lifetime of a MIG device.

`nvmlReturn_t nvmlDeviceGetMinorNumber (nvmlDevice_t device, unsigned int *minorNumber)`

Parameters**device**

The identifier of the target device

minorNumber

Reference in which to return the minor number for the device

Returns

- ▶ `NVML_SUCCESS` if the minor number is successfully retrieved
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized

- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or minorNumber is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves minor number for the device. The minor number for the device is such that the Nvidia device node file for each GPU will have the form /dev/nvidia[minor number].

For all products. Supported only for Linux

nvmlReturn_t nvmlDeviceGetBoardPartNumber (nvmlDevice_t device, char *partNumber, unsigned int length)

Parameters

device

Identifier of the target device

partNumber

Reference to the buffer to return

length

Length of the buffer reference

Returns

- ▶ NVML_SUCCESS if partNumber has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_NOT_SUPPORTED if the needed VBIOS fields have not been filled
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or serial is NULL
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the the device board part number which is programmed into the board's InfoROM

For all products.

`nvmlReturn_t nvmlDeviceGetInforomVersion (nvmlDevice_t device, nvmlInforomObject_t object, char *version, unsigned int length)`

Parameters

device

The identifier of the target device

object

The target infoROM object

version

Reference in which to return the infoROM version

length

The maximum allowed length of the string returned in version

Returns

- ▶ NVML_SUCCESS if version has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if version is NULL
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if length is too small
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not have an infoROM
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the version information for the device's infoROM object.

For all products with an inforom.

Fermi and higher parts have non-volatile on-board memory for persisting device info, such as aggregate ECC counts. The version of the data structures in this memory may change from time to time. It will not exceed 16 characters in length (including the NULL terminator). See [nvmlConstants::NVML_DEVICE_INFOROM_VERSION_BUFFER_SIZE](#).

See [nvmlInforomObject_t](#) for details on the available infoROM objects.

See also:

[nvmlDeviceGetInforomImageVersion](#)

`nvmlReturn_t nvmlDeviceGetInforomImageVersion (nvmlDevice_t device, char *version, unsigned int length)`

Parameters

device

The identifier of the target device

version

Reference in which to return the infoROM image version

length

The maximum allowed length of the string returned in version

Returns

- ▶ NVML_SUCCESS if version has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if version is NULL
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if length is too small
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not have an infoROM
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the global infoROM image version

For all products with an inforom.

Image version just like VBIOS version uniquely describes the exact version of the infoROM flashed on the board in contrast to infoROM object version which is only an indicator of supported features. Version string will not exceed 16 characters in length (including the NULL terminator). See [nvmlConstants::NVML_DEVICE_INFOROM_VERSION_BUFFER_SIZE](#).

See also:

[nvmlDeviceGetInforomVersion](#)

nvmlReturn_t

nvmlDeviceGetInforomConfigurationChecksum (nvmlDevice_t device, unsigned int *checksum)

Parameters

device

The identifier of the target device

checksum

Reference in which to return the infoROM configuration checksum

Returns

- ▶ NVML_SUCCESS if checksum has been set
- ▶ NVML_ERROR_CORRUPTED_INFOROM if the device's checksum couldn't be retrieved due to infoROM corruption
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if checksum is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the checksum of the configuration stored in the device's infoROM.

For all products with an inforom.

Can be used to make sure that two GPUs have the exact same configuration. Current checksum takes into account configuration stored in PWR and ECC infoROM objects. Checksum can change between driver releases or when user changes configuration (e.g. disable/enable ECC)

nvmlReturn_t nvmlDeviceValidateInforom (nvmlDevice_t device)

Parameters

device

The identifier of the target device

Returns

- ▶ NVML_SUCCESS if infoROM is not corrupted
- ▶ NVML_ERROR_CORRUPTED_INFOROM if the device's infoROM is corrupted
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Reads the infoROM from the flash and verifies the checksums.

For all products with an inforom.

nvmlReturn_t nvmlDeviceGetLastBBXFlushTime (nvmlDevice_t device, unsigned long long *timestamp, unsignedlong *durationUs)

Parameters**device**

The identifier of the target device

timestamp

The start timestamp of the last BBX Flush

durationUs

The duration (us) of the last BBX Flush

Returns

- ▶ NVML_SUCCESS if timestamp and durationUs are successfully retrieved
- ▶ NVML_ERROR_NOT_READY if the BBX object has not been flushed yet
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not have an infoROM
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the timestamp and the duration of the last flush of the BBX (blackbox) infoROM object during the current run.

For all products with an inforom.

See also:

[nvmlDeviceGetInforomVersion](#)

nvmlReturn_t nvmlDeviceGetDisplayMode (nvmlDevice_t device, nvmlEnableState_t *display)

Parameters**device**

The identifier of the target device

display

Reference in which to return the display mode

Returns

- ▶ NVML_SUCCESS if display has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or display is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the display mode for the device.

For all products.

This method indicates whether a physical display (e.g. monitor) is currently connected to any of the device's connectors.

See [nvmlEnableState_t](#) for details on allowed modes.

nvmlReturn_t nvmlDeviceGetDisplayActive (nvmlDevice_t device, nvmlEnableState_t *isActive)

Parameters**device**

The identifier of the target device

isActive

Reference in which to return the display active state

Returns

- ▶ NVML_SUCCESS if isActive has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or isActive is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the display active state for the device.

For all products.

This method indicates whether a display is initialized on the device. For example whether X Server is attached to this device and has allocated memory for the screen.

Display can be active even when no monitor is physically attached.

See [nvmlEnableState_t](#) for details on allowed modes.

nvmlReturn_t nvmlDeviceGetPersistenceMode (nvmlDevice_t device, nvmlEnableState_t *mode)

Parameters**device**

The identifier of the target device

mode

Reference in which to return the current driver persistence mode

Returns

- ▶ NVML_SUCCESS if mode has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or mode is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the persistence mode associated with this device.

For all products. For Linux only.

When driver persistence mode is enabled the driver software state is not torn down when the last client disconnects. By default this feature is disabled.

See [nvmlEnableState_t](#) for details on allowed modes.

See also:

[nvmlDeviceSetPersistenceMode\(\)](#)

nvmlReturn_t nvmlDeviceGetPciInfoExt (nvmlDevice_t device, nvmlPciInfoExt_t *pci)

Parameters

device

The identifier of the target device

pci

Reference in which to return the PCI info

Returns

- ▶ NVML_SUCCESS if pci has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or pci is NULL
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves PCI attributes of this device.

For all products.

See [nvmlPciInfoExt_v1_t](#) for details on the available PCI info.

nvmlReturn_t nvmlDeviceGetPciInfo_v3 (nvmlDevice_t device, nvmlPciInfo_t *pci)

Parameters

device

The identifier of the target device

pci

Reference in which to return the PCI info

Returns

- ▶ NVML_SUCCESS if pci has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or pci is NULL
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the PCI attributes of this device.

For all products.

See [nvmlPciInfo_t](#) for details on the available PCI info.

nvmlReturn_t nvmlDeviceGetMaxPcieLinkGeneration (nvmlDevice_t device, unsigned int *maxLinkGen)

Parameters**device**

The identifier of the target device

maxLinkGen

Reference in which to return the max PCIe link generation

Returns

- ▶ NVML_SUCCESS if maxLinkGen has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or maxLinkGen is null
- ▶ NVML_ERROR_NOT_SUPPORTED if PCIe link information is not available
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the maximum PCIe link generation possible with this device and system

I.E. for a generation 2 PCIe device attached to a generation 1 PCIe bus the max link generation this function will report is generation 1.

For Fermi or newer fully supported devices.

nvmlReturn_t nvmlDeviceGetGpuMaxPcieLinkGeneration (nvmlDevice_t device, unsigned int *maxLinkGenDevice)

Parameters

device

The identifier of the target device

maxLinkGenDevice

Reference in which to return the max PCIe link generation

Returns

- ▶ NVML_SUCCESS if maxLinkGenDevice has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or maxLinkGenDevice is null
- ▶ NVML_ERROR_NOT_SUPPORTED if PCIe link information is not available
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the maximum PCIe link generation supported by this device

For Fermi or newer fully supported devices.

nvmlReturn_t nvmlDeviceGetMaxPcieLinkWidth (nvmlDevice_t device, unsigned int *maxLinkWidth)

Parameters

device

The identifier of the target device

maxLinkWidth

Reference in which to return the max PCIe link generation

Returns

- ▶ NVML_SUCCESS if maxLinkWidth has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized

- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or maxLinkWidth is null
- ▶ NVML_ERROR_NOT_SUPPORTED if PCIe link information is not available
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the maximum PCIe link width possible with this device and system I.E. for a device with a 16x PCIe bus width attached to a 8x PCIe system bus this function will report a max link width of 8.

For Fermi or newer fully supported devices.

nvmlReturn_t nvmlDeviceGetCurrPcieLinkGeneration (nvmlDevice_t device, unsigned int *currLinkGen)

Parameters

device

The identifier of the target device

currLinkGen

Reference in which to return the current PCIe link generation

Returns

- ▶ NVML_SUCCESS if currLinkGen has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or currLinkGen is null
- ▶ NVML_ERROR_NOT_SUPPORTED if PCIe link information is not available
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the current PCIe link generation

For Fermi or newer fully supported devices.

`nvmlReturn_t nvmlDeviceGetCurrPcieLinkWidth (nvmlDevice_t device, unsigned int *currLinkWidth)`

Parameters

device

The identifier of the target device

currLinkWidth

Reference in which to return the current PCIe link generation

Returns

- ▶ NVML_SUCCESS if currLinkWidth has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or currLinkWidth is null
- ▶ NVML_ERROR_NOT_SUPPORTED if PCIe link information is not available
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the current PCIe link width

For Fermi or newer fully supported devices.

`nvmlReturn_t nvmlDeviceGetPcieThroughput (nvmlDevice_t device, nvmlPcieUtilCounter_t counter, unsigned int *value)`

Parameters

device

The identifier of the target device

counter

The specific counter that should be queried `nvmlPcieUtilCounter_t`

value

Reference in which to return throughput in KB/s

Returns

- ▶ NVML_SUCCESS if value has been set

- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device or counter is invalid, or value is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve PCIe utilization information. This function is querying a byte counter over a 20ms interval and thus is the PCIe throughput over that interval.

For Maxwell or newer fully supported devices.

This method is not supported in virtual machines running virtual GPU (vGPU).

nvmlReturn_t nvmlDeviceGetPcieReplayCounter (nvmlDevice_t device, unsigned int *value)

Parameters

device

The identifier of the target device

value

Reference in which to return the counter's value

Returns

- ▶ NVML_SUCCESS if value has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, or value is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the PCIe replay counter.

For Kepler or newer fully supported devices.

`nvmlReturn_t nvmlDeviceGetClockInfo (nvmlDevice_t device, nvmlClockType_t type, unsigned int *clock)`

Parameters

device

The identifier of the target device

type

Identify which clock domain to query

clock

Reference in which to return the clock speed in MHz

Returns

- ▶ NVML_SUCCESS if clock has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or clock is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device cannot report the specified clock
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the current clock speeds for the device.

For Fermi or newer fully supported devices.

See `nvmlClockType_t` for details on available clock information.

`nvmlReturn_t nvmlDeviceGetMaxClockInfo (nvmlDevice_t device, nvmlClockType_t type, unsigned int *clock)`

Parameters

device

The identifier of the target device

type

Identify which clock domain to query

clock

Reference in which to return the clock speed in MHz

Returns

- ▶ NVML_SUCCESS if clock has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or clock is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device cannot report the specified clock
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the maximum clock speeds for the device.

For Fermi or newer fully supported devices.

See [nvmlClockType_t](#) for details on available clock information.

Current P0 clocks (reported by [nvmlDeviceGetClockInfo](#)) can differ from max clocks by a few MHz.

[nvmlReturn_t nvmlDeviceGetGpcClkVfOffset](#) **(nvmlDevice_t device, int *offset)**

Parameters**device**

The identifier of the target device

offset

The retrieved GPCCLK VF offset value

Returns

- ▶ NVML_SUCCESS if offset has been successfully queried
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or offset is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the GPCCLK VF offset value

**nvmlReturn_t nvmlDeviceGetApplicationsClock
(nvmlDevice_t device, nvmlClockType_t clockType,
unsigned int *clockMHz)**

Description

Deprecated Applications clocks are deprecated and will be removed in CUDA 14.0.

**nvmlReturn_t nvmlDeviceGetDefaultApplicationsClock
(nvmlDevice_t device, nvmlClockType_t clockType,
unsigned int *clockMHz)**

Description

Deprecated Applications clocks are deprecated and will be removed in CUDA 14.0.

**nvmlReturn_t nvmlDeviceGetClock (nvmlDevice_t
device, nvmlClockType_t clockType, nvmlClockId_t
clockId, unsigned int *clockMHz)**

Parameters

device

The identifier of the target device

clockType

Identify which clock domain to query

clockId

Identify which clock in the domain to query

clockMHz

Reference in which to return the clock in MHz

Returns

- ▶ NVML_SUCCESS if clockMHz has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or clockMHz is NULL or clockType is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible

- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the clock speed for the clock specified by the clock type and clock ID.

For Kepler or newer fully supported devices.

**nvmlReturn_t nvmlDeviceGetMaxCustomerBoostClock
(nvmlDevice_t device, nvmlClockType_t clockType,
unsigned int *clockMHz)**

Parameters

device

The identifier of the target device

clockType

Identify which clock domain to query

clockMHz

Reference in which to return the clock in MHz

Returns

- ▶ NVML_SUCCESS if clockMHz has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or clockMHz is NULL or clockType is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device or the clockType on this device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the customer defined maximum boost clock speed specified by the given clock type.

For Pascal or newer fully supported devices.

`nvmlReturn_t nvmlDeviceGetSupportedMemoryClocks (nvmlDevice_t device, unsigned int *count, unsigned int *clocksMHz)`

Parameters

device

The identifier of the target device

count

Reference in which to provide the clocksMHz array size, and to return the number of elements

clocksMHz

Reference in which to return the clock in MHz

Returns

- ▶ NVML_SUCCESS if count and clocksMHz have been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or count is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if count is too small (count is set to the number of required elements)
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the list of possible memory clocks that can be used as an argument for [nvmlDeviceSetMemoryLockedClocks](#).

For Kepler or newer fully supported devices.

See also:

[nvmlDeviceSetMemoryLockedClocks](#)

nvmlReturn_t nvmlDeviceGetSupportedGraphicsClocks (nvmlDevice_t device, unsigned int memoryClockMHz, unsigned int *count, unsigned int *clocksMHz)

Parameters

device

The identifier of the target device

memoryClockMHz

Memory clock for which to return possible graphics clocks

count

Reference in which to provide the clocksMHz array size, and to return the number of elements

clocksMHz

Reference in which to return the clocks in MHz

Returns

- ▶ NVML_SUCCESS if count and clocksMHz have been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_NOT_FOUND if the specified memoryClockMHz is not a supported frequency
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or clock is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if count is too small
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the list of possible graphics clocks that can be used as an argument for [nvmlDeviceSetGpuLockedClocks](#).

For Kepler or newer fully supported devices.

See also:

[nvmlDeviceSetGpuLockedClocks](#)

`nvmlReturn_t nvmlDeviceGetAutoBoostedClocksEnabled(nvmlDevice_t device, nvmlEnableState_t *isEnabled, nvmlEnableState_t *defaultIsEnabled)`

Parameters

device

The identifier of the target device

isEnabled

Where to store the current state of Auto Boosted clocks of the target device

defaultIsEnabled

Where to store the default Auto Boosted clocks behavior of the target device that the device will revert to when no applications are using the GPU

Returns

- ▶ NVML_SUCCESS If isEnabled has been set with the Auto Boosted clocks state of device
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or isEnabled is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support Auto Boosted clocks
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the current state of Auto Boosted clocks on a device and store it in isEnabled

For Kepler or newer fully supported devices.

Auto Boosted clocks are enabled by default on some hardware, allowing the GPU to run at higher clock rates to maximize performance as thermal limits allow.

On Pascal and newer hardware, Auto Boosted clocks are controlled through application clocks. Use [nvmlDeviceSetApplicationsClocks](#) and [nvmlDeviceResetApplicationsClocks](#) to control Auto Boost behavior.

`nvmlReturn_t nvmlDeviceGetFanSpeed (nvmlDevice_t device, unsigned int *speed)`

Parameters

device

The identifier of the target device

speed

Reference in which to return the fan speed percentage

Returns

- ▶ NVML_SUCCESS if speed has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or speed is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not have a fan
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the intended operating speed of the device's fan.

Note: The reported speed is the intended fan speed. If the fan is physically blocked and unable to spin, the output will not match the actual fan speed.

For all discrete products with dedicated fans.

The fan speed is expressed as a percentage of the product's maximum noise tolerance fan speed. This value may exceed 100% in certain cases.

`nvmlReturn_t nvmlDeviceGetFanSpeed_v2 (nvmlDevice_t device, unsigned int fan, unsigned int *speed)`

Parameters

device

The identifier of the target device

fan

The index of the target fan, zero indexed.

speed

Reference in which to return the fan speed percentage

Returns

- ▶ NVML_SUCCESS if speed has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, fan is not an acceptable index, or speed is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not have a fan or is newer than Maxwell
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the intended operating speed of the device's specified fan.

Note: The reported speed is the intended fan speed. If the fan is physically blocked and unable to spin, the output will not match the actual fan speed.

For all discrete products with dedicated fans.

The fan speed is expressed as a percentage of the product's maximum noise tolerance fan speed. This value may exceed 100% in certain cases.

nvmlReturn_t nvmlDeviceGetFanSpeedRPM (nvmlDevice_t device, nvmlFanSpeedInfo_t *fanSpeed)

Parameters**device**

The identifier of the target device

fanSpeed

Structure specifying the index of the target fan (input) and retrieved fan speed value (output)

Returns

- ▶ NVML_SUCCESS If everything worked
- ▶ NVML_ERROR_UNINITIALIZED If the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device is invalid, fan is not an acceptable index, or speed is NULL

- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the provided version is invalid/unsupported
- ▶ NVML_ERROR_NOT_SUPPORTED If the device does not support this feature

Description

Retrieves the intended operating speed in rotations per minute (RPM) of the device's specified fan.

For Maxwell or newer fully supported devices.

For all discrete products with dedicated fans.

Note: The reported speed is the intended fan speed. If the fan is physically blocked and unable to spin, the output will not match the actual fan speed.

nvmlReturn_t nvmlDeviceGetTargetFanSpeed (nvmlDevice_t device, unsigned int fan, unsigned int *targetSpeed)

Parameters

device

The identifier of the target device

fan

The index of the target fan, zero indexed.

targetSpeed

Reference in which to return the fan speed percentage

Returns

- ▶ NVML_SUCCESS if speed has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, fan is not an acceptable index, or speed is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not have a fan or is newer than Maxwell
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the intended target speed of the device's specified fan.

Normally, the driver dynamically adjusts the fan based on the needs of the GPU. But when user set fan speed using `nvmlDeviceSetFanSpeed_v2`, the driver will attempt to make the fan achieve the setting in `nvmlDeviceSetFanSpeed_v2`. The actual current speed of the fan is reported in `nvmlDeviceGetFanSpeed_v2`.

For all discrete products with dedicated fans.

The fan speed is expressed as a percentage of the product's maximum noise tolerance fan speed. This value may exceed 100% in certain cases.

`nvmlReturn_t nvmlDeviceGetMinMaxFanSpeed (nvmlDevice_t device, unsigned int *minSpeed, unsigned int *maxSpeed)`

Parameters

device

The identifier of the target device

minSpeed

The minimum speed allowed to set

maxSpeed

The maximum speed allowed to set

Description

Retrieves the min and max fan speed that user can set for the GPU fan.

For all cuda-capable discrete products with fans

return NVML_SUCCESS if speed has been adjusted

NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
NVML_ERROR_INVALID_ARGUMENT if device is invalid

NVML_ERROR_NOT_SUPPORTED if the device does not support this (doesn't have fans)
NVML_ERROR_UNKNOWN on any unexpected error

`nvmlReturn_t nvmlDeviceGetFanControlPolicy_v2 (nvmlDevice_t device, unsigned int fan, nvmlFanControlPolicy_t *policy)`

Description

Gets current fan control policy.

For Maxwell or newer fully supported devices.

For all cuda-capable discrete products with fans

device The identifier of the target device policy Reference in which to return the fan control policy

return NVML_SUCCESS if policy has been populated
 NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
 NVML_ERROR_INVALID_ARGUMENT if device is invalid or policy is null or the fan given doesn't reference a fan that exists. NVML_ERROR_NOT_SUPPORTED if the device is older than Maxwell NVML_ERROR_UNKNOWN on any unexpected error

nvmlReturn_t nvmlDeviceGetNumFans (nvmlDevice_t device, unsigned int *numFans)

Parameters

device

The identifier of the target device

numFans

The number of fans

Returns

- ▶ NVML_SUCCESS if fan number query was successful
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or numFans is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not have a fan
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the number of fans on the device.

For all discrete products with dedicated fans.

nvmlReturn_t nvmlDeviceGetTemperature (nvmlDevice_t device, nvmlTemperatureSensors_t sensorType, unsigned int *temp)

Description

Deprecated Use **nvmlDeviceGetTemperatureV** instead

`nvmlReturn_t nvmlDeviceGetCoolerInfo (nvmlDevice_t device, nvmlCoolerInfo_t *coolerInfo)`

Parameters

device

The identifier of the target device

coolerInfo

Structure specifying the cooler's control signal characteristics (out) and the target that cooler cools (out)

Returns

- ▶ NVML_SUCCESS If everything worked
- ▶ NVML_ERROR_UNINITIALIZED If the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device is invalid, signalType or target is NULL
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the provided version is invalid/unsupported
- ▶ NVML_ERROR_NOT_SUPPORTED If the device does not support this feature

Description

Retrieves the cooler's information. Returns a cooler's control signal characteristics. The possible types are restricted, Variable and Toggle. See [nvmlCoolerControl_t](#) for details on available signal types. Returns objects that cooler cools. Targets may be GPU, Memory, Power Supply or All of these. See [nvmlCoolerTarget_t](#) for details on available targets.

For Maxwell or newer fully supported devices.

For all discrete products with dedicated fans.

`nvmlReturn_t nvmlDeviceGetTemperatureV (nvmlDevice_t device, nvmlTemperature_t *temperature)`

Parameters

device

Target device identifier.

temperature

Structure specifying the sensor type (input) and retrieved temperature value (output).

Returns

- ▶ NVML_SUCCESS if temp has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, sensorType is invalid or temp is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not have the specified sensor
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the current temperature readings (in degrees C) for the given device.

For all products.

nvmlReturn_t nvmlDeviceGetTemperatureThreshold (nvmlDevice_t device, nvmlTemperatureThresholds_t thresholdType, unsigned int *temp)

Parameters**device**

The identifier of the target device

thresholdType

The type of threshold value queried

temp

Reference in which to return the temperature reading

Returns

- ▶ NVML_SUCCESS if temp has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, thresholdType is invalid or temp is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not have a temperature sensor or is unsupported
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the temperature threshold for the GPU with the specified threshold type in degrees C.

For Kepler or newer fully supported devices.

See [nvmlTemperatureThresholds_t](#) for details on available temperature thresholds.

Note: This API is no longer the preferred interface for retrieving the following temperature thresholds on Ada and later architectures:

NVML_TEMPERATURE_THRESHOLD_SHUTDOWN,
 NVML_TEMPERATURE_THRESHOLD_SLOWDOWN,
 NVML_TEMPERATURE_THRESHOLD_MEM_MAX and
 NVML_TEMPERATURE_THRESHOLD_GPU_MAX.

Support for reading these temperature thresholds for Ada and later architectures would be removed from this API in future releases. Please use [nvmlDeviceGetFieldValues](#) with NVML_FI_DEV_TEMPERATURE_* fields to retrieve temperature thresholds on these architectures.

nvmlReturn_t nvmlDeviceGetMarginTemperature (nvmlDevice_t device, nvmlMarginTemperature_t *marginTempInfo)

Parameters

device

The identifier of the target device

marginTempInfo

Versioned structure in which to return the temperature reading

Returns

- ▶ NVML_SUCCESS if the margin temperature was retrieved successfully
- ▶ NVML_ERROR_NOT_SUPPORTED if request is not supported on the current platform
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or temperature is NULL
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH if the right versioned structure is not used
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the thermal margin temperature (distance to nearest slowdown threshold).

**nvmlReturn_t nvmlDeviceGetThermalSettings
(nvmlDevice_t device, unsigned int sensorIndex,
nvmlGpuThermalSettings_t *pThermalSettings)**

Parameters**device**

The identifier of the target device

sensorIndex

The index of the thermal sensor

pThermalSettings

Reference in which to return the thermal sensor information

Returns

- ▶ NVML_SUCCESS if pThermalSettings has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or pThermalSettings is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Used to execute a list of thermal system instructions.

**nvmlReturn_t nvmlDeviceGetPerformanceState
(nvmlDevice_t device, nvmlPstates_t *pState)**

Parameters**device**

The identifier of the target device

pState

Reference in which to return the performance state reading

Returns

- ▶ NVML_SUCCESS if pState has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or pState is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the current performance state for the device.

For Fermi or newer fully supported devices.

See [nvmlPstates_t](#) for details on allowed performance states.

nvmlReturn_t nvmlDeviceGetCurrentClocksEventReasons (nvmlDevice_t device, unsigned long long *clocksEventReasons)

Parameters**device**

The identifier of the target device

clocksEventReasons

Reference in which to return bitmask of active clocks event reasons

Returns

- ▶ NVML_SUCCESS if clocksEventReasons has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or clocksEventReasons is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves current clocks event reasons.

For all fully supported products.

More than one bit can be enabled at the same time. Multiple reasons can be affecting clocks at once.

See also:

[NvmlClocksEventReasons](#)

[nvmlDeviceGetSupportedClocksEventReasons](#)

nvmlReturn_t

nvmlDeviceGetCurrentClocksThrottleReasons
(nvmlDevice_t device, unsigned long long *clocksThrottleReasons)

Description

Deprecated Use [nvmlDeviceGetSupportedClocksEventReasons](#) instead

nvmlReturn_t

nvmlDeviceGetSupportedClocksEventReasons
(nvmlDevice_t device, unsigned long long *supportedClocksEventReasons)

Parameters

device

The identifier of the target device

supportedClocksEventReasons

Reference in which to return bitmask of supported clocks event reasons

Returns

- ▶ NVML_SUCCESS if supportedClocksEventReasons has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or supportedClocksEventReasons is NULL
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves bitmask of supported clocks event reasons that can be returned by [nvmlDeviceGetCurrentClocksEventReasons](#)

For all fully supported products.

This method is not supported in virtual machines running virtual GPU (vGPU).

See also:

[NvmlClocksEventReasons](#)

[nvmlDeviceGetCurrentClocksEventReasons](#)

nvmlReturn_t

nvmlDeviceGetSupportedClocksThrottleReasons

(**nvmlDevice_t** device, **unsigned long long**

***supportedClocksThrottleReasons**)

Description

Deprecated Use [nvmlDeviceGetSupportedClocksEventReasons](#) instead

nvmlReturn_t nvmlDeviceGetPowerState (nvmlDevice_t device, nvmlPstates_t *pState)

Parameters

device

The identifier of the target device

pState

Reference in which to return the performance state reading

Returns

- ▶ NVML_SUCCESS if pState has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or pState is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Deprecated Use [nvmDeviceGetPerformanceState](#). This function exposes an incorrect generalization.

Retrieve the current performance state for the device.

For Fermi or newer fully supported devices.

See [nvmlPstates_t](#) for details on allowed performance states.

nvmlReturn_t nvmDeviceGetDynamicPstatesInfo (nvmlDevice_t device, nvmlGpuDynamicPstatesInfo_t *pDynamicPstatesInfo)

Parameters

device
pDynamicPstatesInfo

Returns

- ▶ NVML_SUCCESS if pDynamicPstatesInfo has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or pDynamicPstatesInfo is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve performance monitor samples from the associated subdevice.

nvmlReturn_t nvmDeviceGetMemClkVfOffset (nvmlDevice_t device, int *offset)

Parameters

device

The identifier of the target device

offset

The retrieved MemClk VF offset value

Returns

- ▶ NVML_SUCCESS if offset has been successfully queried
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or offset is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the MemClk (Memory Clock) VF offset value.

**nvmlReturn_t nvmlDeviceGetMinMaxClockOfPState
(nvmlDevice_t device, nvmlClockType_t type,
nvmlPstates_t pstate, unsigned int *minClockMHz,
unsigned int *maxClockMHz)**

Parameters**device**

The identifier of the target device

type

Clock domain

pstate

PState to query

minClockMHz

Reference in which to return min clock frequency

maxClockMHz

Reference in which to return max clock frequency

Returns

- ▶ NVML_SUCCESS if everything worked
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device, type or minClockMHz and maxClockMHz are NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_UNKNOWN if type or pstate are invalid or any unexpected error

Description

Retrieve min and max clocks of some clock domain for a given PState

**nvmlReturn_t
nvmlDeviceGetSupportedPerformanceStates
(nvmlDevice_t device, nvmlPstates_t *pstates, unsigned int size)**

Parameters

device

The identifier of the target device

pstates

Container to return the list of performance states supported by device

size

Size of the supplied pstates array in bytes

Returns

- ▶ NVML_SUCCESS if pstates array has been retrieved
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if the the container supplied was not large enough to hold the resulting list
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device or pstates is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support performance state readings
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Get all supported Performance States (P-States) for the device.

The returned array would contain a contiguous list of valid P-States supported by the device. If the number of supported P-States is fewer than the size of the array supplied missing elements would contain NVML_PSTATE_UNKNOWN.

The number of elements in the returned list will never exceed NVML_MAX_GPU_PERF_PSTATES.

`nvmlReturn_t nvmlDeviceGetGpcClkMinMaxVfOffset (nvmlDevice_t device, int *minOffset, int *maxOffset)`

Parameters

device

The identifier of the target device

minOffset

The retrieved GPCCLK VF min offset value

maxOffset

The retrieved GPCCLK VF max offset value

Returns

- ▶ NVML_SUCCESS if offset has been successfully queried
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or offset is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the GPCCLK min max VF offset value.

`nvmlReturn_t nvmlDeviceGetMemClkMinMaxVfOffset (nvmlDevice_t device, int *minOffset, int *maxOffset)`

Parameters

device

The identifier of the target device

minOffset

The retrieved MemClk VF min offset value

maxOffset

The retrieved MemClk VF max offset value

Returns

- ▶ NVML_SUCCESS if offset has been successfully queried
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or offset is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the MemClk (Memory Clock) min max VF offset value.

nvmlReturn_t nvmlDeviceGetClockOffsets (nvmlDevice_t device, nvmlClockOffset_t *info)

Parameters

device

The identifier of the target device

info

Structure specifying the clock type (input) and the pstate (input) retrieved clock offset value (output), min clock offset (output) and max clock offset (output)

Returns

- ▶ NVML_SUCCESS If everything worked
- ▶ NVML_ERROR_UNINITIALIZED If the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device, type or pstate are invalid or both minClockOffsetMHz and maxClockOffsetMHz are NULL
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the provided version is invalid/unsupported
- ▶ NVML_ERROR_NOT_SUPPORTED If the device does not support this feature

Description

Retrieve min, max and current clock offset of some clock domain for a given PState

For Maxwell or newer fully supported devices.

Note: [nvmlDeviceGetGpcClkVfOffset](#), [nvmlDeviceGetMemClkVfOffset](#),
[nvmlDeviceGetGpcClkMinMaxVfOffset](#) and [nvmlDeviceGetMemClkMinMaxVfOffset](#) will be deprecated in a future release. Use [nvmlDeviceGetClockOffsets](#) instead.

nvmlReturn_t nvmlDeviceSetClockOffsets (nvmlDevice_t device, nvmlClockOffset_t *info)

Parameters

device

The identifier of the target device

info

Structure specifying the clock type (input), the pstate (input) and clock offset value (input)

Returns

- ▶ NVML_SUCCESS If everything worked
- ▶ NVML_ERROR_UNINITIALIZED If the library has not been successfully initialized
- ▶ NVML_ERROR_NO_PERMISSION If the user doesn't have permission to perform this operation
- ▶ NVML_ERROR_INVALID_ARGUMENT If device, type or pstate are invalid or both clockOffsetMHz is out of allowed range.
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the provided version is invalid/unsupported
- ▶ NVML_ERROR_NOT_SUPPORTED If the device does not support this feature

Description

Control current clock offset of some clock domain for a given PState

For Maxwell or newer fully supported devices.

Requires privileged user.

nvmlReturn_t nvmlDeviceGetPerformanceModes (nvmlDevice_t device, nvmlDevicePerfModes_t *perfModes)

Parameters**device**

The identifier of the target device

perfModes

Reference in which to return the performance level string

Returns

- ▶ NVML_SUCCESS if perfModes has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, or name is NULL
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if length is too small
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves a performance mode string with all the performance modes defined for this device along with their associated GPU Clock and Memory Clock values. Not all tokens

will be reported on all GPUs, and additional tokens may be added in the future. For backwards compatibility we still provide nvclock and memclock; those are the same as nvclockmin and memclockmin.

Note: These clock values take into account the offset set by clients through /ref nvmlDeviceSetClockOffsets.

Maximum available Pstate (P15) shows the minimum performance level (0) and vice versa.

Each performance modes are returned as a comma-separated list of "token=value" pairs. Each set of performance mode tokens are separated by a ";". Valid tokens:

Token Value "perf" unsigned int - the Performance level "nvclock" unsigned int - the GPU clocks (in MHz) for the perf level "nvclockmin" unsigned int - the GPU clocks min (in MHz) for the perf level "nvclockmax" unsigned int - the GPU clocks max (in MHz) for the perf level "nvclockeditable" unsigned int - if the GPU clock domain is editable for the perf level "memclock" unsigned int - the memory clocks (in MHz) for the perf level "memclockmin" unsigned int - the memory clocks min (in MHz) for the perf level "memclockmax" unsigned int - the memory clocks max (in MHz) for the perf level "memclockeditable" unsigned int - if the memory clock domain is editable for the perf level "memtransferrate" unsigned int - the memory transfer rate (in MHz) for the perf level "memtransferratemin" unsigned int - the memory transfer rate min (in MHz) for the perf level "memtransferratemax" unsigned int - the memory transfer rate max (in MHz) for the perf level "memtransferrateeditable" unsigned int - if the memory transfer rate is editable for the perf level

Example:

```
perf=0, nvclock=324, nvclockmin=324, nvclockmax=324, nvclockeditable=0,
memclock=324, memclockmin=324, memclockmax=324, memclockeditable=0,
memtransferrate=648, memtransferratemin=648, memtransferratemax=648,
memtransferrateeditable=0 ; perf=1, nvclock=324, nvclockmin=324, nvclockmax=640,
nvclockeditable=0, memclock=810, memclockmin=810, memclockmax=810,
memclockeditable=0, memtransferrate=1620, memtransferrate=1620,
memtransferrate=1620, memtransferrateeditable=0 ;
```

nvmlReturn_t nvmlDeviceGetCurrentClockFreqs (nvmlDevice_t device, nvmlDeviceCurrentClockFreqs_t *currentClockFreqs)

Parameters

device

The identifier of the target device

currentClockFreqs

Reference in which to return the performance level string

Returns

- ▶ NVML_SUCCESS if currentClockFreqs has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, or name is NULL
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if length is too small
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves a string with the associated current GPU Clock and Memory Clock values.

Not all tokens will be reported on all GPUs, and additional tokens may be added in the future.

Note: These clock values take into account the offset set by clients through /ref nvmlDeviceSetClockOffsets.

Clock values are returned as a comma-separated list of "token=value" pairs. Valid tokens:

Token Value "perf" unsigned int - the Performance level "nvclock" unsigned int - the GPU clocks (in MHz) for the perf level "nvclockmin" unsigned int - the GPU clocks min (in MHz) for the perf level "nvclockmax" unsigned int - the GPU clocks max (in MHz) for the perf level "nvclockeditable" unsigned int - if the GPU clock domain is editable for the perf level "memclock" unsigned int - the memory clocks (in MHz) for the perf level "memclockmin" unsigned int - the memory clocks min (in MHz) for the perf level "memclockmax" unsigned int - the memory clocks max (in MHz) for the perf level "memclockeditable" unsigned int - if the memory clock domain is editable for the perf level "memtransferrate" unsigned int - the memory transfer rate (in MHz) for the perf level "memtransferratemin" unsigned int - the memory transfer rate min (in MHz) for the perf level "memtransferratemax" unsigned int - the memory transfer rate max (in MHz) for the perf level "memtransferrateeditable" unsigned int - if the memory transfer rate is editable for the perf level

Example:

```
nvclock=324, nvclockmin=324, nvclockmax=324, nvclockeditable=0, memclock=324,
memclockmin=324, memclockmax=324, memclockeditable=0, memtransferrate=648,
memtransferratemin=648, memtransferratemax=648, memtransferrateeditable=0 ;
```

`nvmlReturn_t nvmlDeviceGetPowerManagementMode (nvmlDevice_t device, nvmlEnableState_t *mode)`

Parameters

device

The identifier of the target device

mode

Reference in which to return the current power management mode

Returns

- ▶ NVML_SUCCESS if mode has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or mode is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Deprecated This API has been deprecated.

Retrieves the power management mode associated with this device.

For products from the Fermi family.

- ▶ Requires NVML_INFOROM_POWER version 3.0 or higher.

For from the Kepler or newer families.

- ▶ Does not require NVML_INFOROM_POWER object.

This flag indicates whether any power management algorithm is currently active on the device. An enabled state does not necessarily mean the device is being actively throttled -- only that the driver will do so if the appropriate conditions are met.

See [nvmlEnableState_t](#) for details on allowed modes.

nvmlReturn_t nvmlDeviceGetPowerManagementLimit (nvmlDevice_t device, unsigned int *limit)

Parameters

device

The identifier of the target device

limit

Reference in which to return the power management limit in milliwatts

Returns

- ▶ NVML_SUCCESS if limit has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or limit is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the power management limit associated with this device.

For Fermi or newer fully supported devices.

The power limit defines the upper boundary for the card's power draw. If the card's total power draw reaches this limit the power management algorithm kicks in.

This reading is only available if power management mode is supported. See [nvmlDeviceGetPowerManagementMode](#).

nvmlReturn_t nvmlDeviceGetPowerManagementLimitConstraints (nvmlDevice_t device, unsigned int *minLimit, unsigned int *maxLimit)

Parameters

device

The identifier of the target device

minLimit

Reference in which to return the minimum power management limit in milliwatts

maxLimit

Reference in which to return the maximum power management limit in milliwatts

Returns

- ▶ NVML_SUCCESS if minLimit and maxLimit have been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or minLimit or maxLimit is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves information about possible values of power management limits on this device.

For Kepler or newer fully supported devices.

See also:

[nvmlDeviceSetPowerManagementLimit](#)

nvmlReturn_t**nvmlDeviceGetPowerManagementDefaultLimit**

(**nvmlDevice_t** device, **unsigned int** ***defaultLimit**)

Parameters**device**

The identifier of the target device

defaultLimit

Reference in which to return the default power management limit in milliwatts

Returns

- ▶ NVML_SUCCESS if defaultLimit has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or defaultLimit is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible

- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves default power management limit on this device, in milliwatts. Default power management limit is a power management limit that the device boots with.

For Kepler or newer fully supported devices.

nvmlReturn_t nvmlDeviceGetPowerUsage (nvmlDevice_t device, unsigned int *power)

Parameters

device

The identifier of the target device

power

Reference in which to return the power usage information

Returns

- ▶ NVML_SUCCESS if power has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or power is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support power readings
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves power usage for this GPU in milliwatts and its associated circuitry (e.g. memory)

For Fermi or newer fully supported devices.

On Fermi and Kepler GPUs the reading is accurate to within +/- 5% of current power draw. On Ampere (except GA100) or newer GPUs, the API returns power averaged over 1 sec interval. On GA100 and older architectures, instantaneous power is returned.

See [NVML_FI_DEV_POWER_AVERAGE](#) and [NVML_FI_DEV_POWER_INSTANT](#) to query specific power values.

It is only available if power management mode is supported. See [nvmlDeviceGetPowerManagementMode](#).

`nvmlReturn_t nvmlDeviceGetPowerMizerMode_v1 (nvmlDevice_t device, nvmlDevicePowerMizerModes_v1_t *powerMizerMode)`

Parameters

device

The identifier of the target device

powerMizerMode

Reference in which to return the power mizer mode

Returns

- ▶ NVML_SUCCESS if powerMizerMode has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or powerMizerMode is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support powerMizerMode readings
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves current power mizer mode on this device.

PowerMizerMode provides a hint to the driver as to how to manage the performance of the GPU.

For Maxwell or newer fully supported devices.

`nvmlReturn_t nvmlDeviceSetPowerMizerMode_v1 (nvmlDevice_t device, nvmlDevicePowerMizerModes_v1_t *powerMizerMode)`

Parameters

device

The identifier of the target device

powerMizerMode

Reference in which to set the power mizer mode.

Returns

- ▶ NVML_SUCCESS if powerMizerMode has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or powerMizerMode is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support powerMizerMode readings
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Sets the new power mizer mode.

For Maxwell or newer fully supported devices.

nvmlReturn_t nvmlDeviceGetTotalEnergyConsumption (nvmlDevice_t device, unsigned long long *energy)

Parameters**device**

The identifier of the target device

energy

Reference in which to return the energy consumption information

Returns

- ▶ NVML_SUCCESS if energy has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or energy is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support energy readings
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves total energy consumption for this GPU in millijoules (mJ) since the driver was last reloaded

For Volta or newer fully supported devices.

nvmlReturn_t nvmlDeviceGetEnforcedPowerLimit (nvmlDevice_t device, unsigned int *limit)

Parameters

device

The device to communicate with

limit

Reference in which to return the power management limit in milliwatts

Returns

- ▶ NVML_SUCCESS if limit has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or limit is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Get the effective power limit that the driver enforces after taking into account all limiters

Note: This can be different from the [nvmlDeviceGetPowerManagementLimit](#) if other limits are set elsewhere. This includes the out of band power limit interface

For Kepler or newer fully supported devices.

nvmlReturn_t nvmlDeviceGetGpuOperationMode (nvmlDevice_t device, nvmlGpuOperationMode_t *current, nvmlGpuOperationMode_t *pending)

Parameters

device

The identifier of the target device

current

Reference in which to return the current GOM

pending

Reference in which to return the pending GOM

Returns

- ▶ NVML_SUCCESS if mode has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or current or pending is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the current GOM and pending GOM (the one that GPU will switch to after reboot).

For GK110 M-class and X-class Tesla products from the Kepler family. Modes `NVML_GOM_LOW_DP` and `NVML_GOM_ALL_ON` are supported on fully supported GeForce products. Not supported on Quadro and Tesla C-class products.

See also:

`nvmlGpuOperationMode_t`

`nvmlDeviceSetGpuOperationMode`

`nvmlReturn_t nvmlDeviceGetMemoryInfo (nvmlDevice_t device, nvmlMemory_t *memory)`

Parameters**device**

The identifier of the target device

memory

Reference in which to return the memory information

Returns

- ▶ NVML_SUCCESS if memory has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to perform this operation
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or memory is NULL
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible

- ▶ NVML_ERROR_NOT_SUPPORTED if video memory is unsupported on the device
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

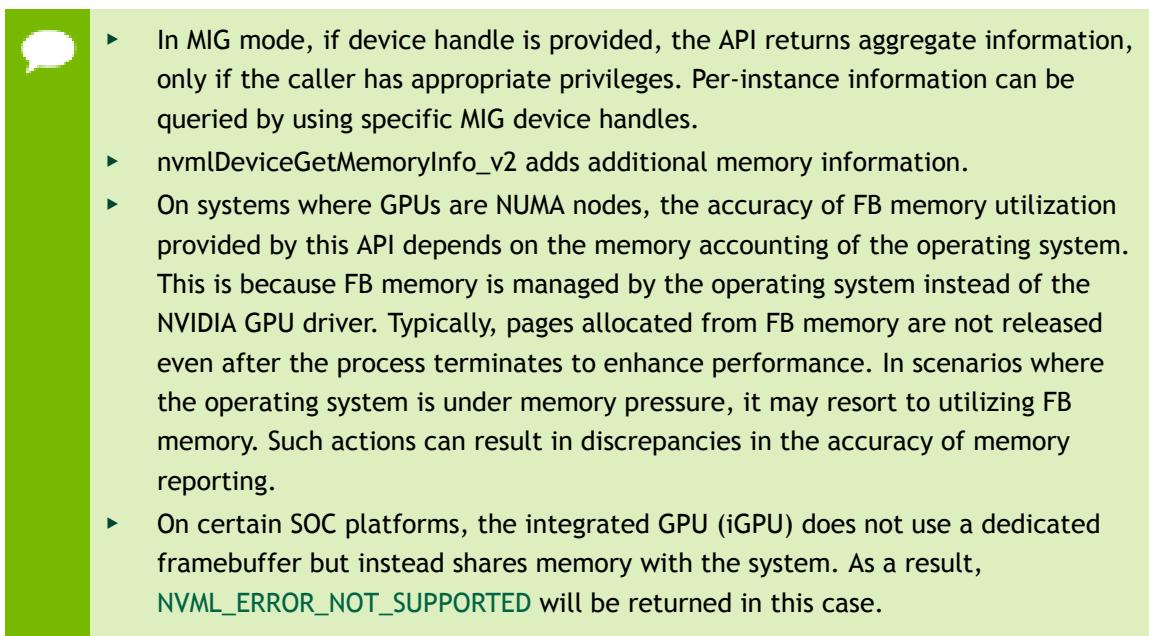

Retrieves the amount of used, free, reserved and total memory available on the device, in bytes. The reserved amount is supported on version 2 only.

For all products.

Enabling ECC reduces the amount of total available memory, due to the extra required parity bits. Under WDDM most device memory is allocated and managed on startup by Windows.

Under Linux and Windows TCC, the reported amount of used memory is equal to the sum of memory allocated by all active channels on the device.

See [nvmlMemory_v2_t](#) for details on available memory info.

`nvmlReturn_t nvmlDeviceGetMemoryInfo_v2 (nvmlDevice_t device, nvmlMemory_v2_t *memory)`

Description

`nvmlDeviceGetMemoryInfo_v2` accounts separately for reserved memory and includes it in the used memory amount.

`nvmlReturn_t nvmlDeviceGetComputeMode (nvmlDevice_t device, nvmlComputeMode_t *mode)`

Parameters

device

The identifier of the target device

mode

Reference in which to return the current compute mode

Returns

- ▶ NVML_SUCCESS if mode has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or mode is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the current compute mode for the device.

For all products.

See [nvmlComputeMode_t](#) for details on allowed compute modes.

See also:

[nvmlDeviceSetComputeMode\(\)](#)

`nvmlReturn_t nvmlDeviceGetCudaComputeCapability (nvmlDevice_t device, int *major, int *minor)`

Parameters

device

The identifier of the target device

major

Reference in which to return the major CUDA compute capability

minor

Reference in which to return the minor CUDA compute capability

Returns

- ▶ NVML_SUCCESS if major and minor have been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or major or minor are NULL
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the CUDA compute capability of the device.

For all products.

Returns the major and minor compute capability version numbers of the device. The major and minor versions are equivalent to the CU_DEVICE_ATTRIBUTE_COMPUTE_CAPABILITY_MINOR and CU_DEVICE_ATTRIBUTE_COMPUTE_CAPABILITY_MAJOR attributes that would be returned by CUDA's cuDeviceGetAttribute().

**nvmlReturn_t nvmlDeviceGetDramEncryptionMode
(nvmlDevice_t device, nvmlDramEncryptionInfo_t
*current, nvmlDramEncryptionInfo_t *pending)**

Parameters**device**

The identifier of the target device

current

Reference in which to return the current DRAM Encryption mode

pending

Reference in which to return the pending DRAM Encryption mode

Returns

- ▶ NVML_SUCCESS if current and pending have been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or either current or pending is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible

- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH if the argument version is not supported
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the current and pending DRAM Encryption modes for the device.

For Blackwell or newer fully supported devices. Only applicable to devices that support DRAM Encryption Requires NVML_INFOMR_DEN version 1.0 or higher.

Changing DRAM Encryption modes requires a reboot. The "pending" DRAM Encryption mode refers to the target mode following the next reboot.

See [nvmlEnableState_t](#) for details on allowed modes.

See also:

[nvmlDeviceSetDramEncryptionMode\(\)](#)

**`nvmlReturn_t nvmlDeviceSetDramEncryptionMode
(nvmlDevice_t device, const nvmlDramEncryptionInfo_t
*dramEncryption)`**

Parameters

device

The identifier of the target device

dramEncryption

The target DRAM Encryption mode

Returns

- ▶ NVML_SUCCESS if the DRAM Encryption mode was set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or DRAM Encryption is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to perform this operation
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH if the argument version is not supported
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Set the DRAM Encryption mode for the device.

For Kepler or newer fully supported devices. Only applicable to devices that support DRAM Encryption. Requires NVML_INFOM_DEN version 1.0 or higher. Requires root/admin permissions.

The DRAM Encryption mode determines whether the GPU enables its DRAM Encryption support.

This operation takes effect after the next reboot.

See [nvmlEnableState_t](#) for details on available modes.

See also:

[nvmlDeviceGetDramEncryptionMode\(\)](#)

`nvmlReturn_t nvmlDeviceGetEccMode (nvmlDevice_t device, nvmlEnableState_t *current, nvmlEnableState_t *pending)`

Parameters

device

The identifier of the target device

current

Reference in which to return the current ECC mode

pending

Reference in which to return the pending ECC mode

Returns

- ▶ NVML_SUCCESS if current and pending have been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or either current or pending is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the current and pending ECC modes for the device.

For Fermi or newer fully supported devices. Only applicable to devices with ECC.
Requires NVML_INFOROM_ECC version 1.0 or higher.

Changing ECC modes requires a reboot. The "pending" ECC mode refers to the target mode following the next reboot.

See [nvmlEnableState_t](#) for details on allowed modes.

See also:

[nvmlDeviceSetEccMode\(\)](#)

`nvmlReturn_t nvmlDeviceGetDefaultEccMode (nvmlDevice_t device, nvmlEnableState_t *defaultMode)`

Parameters

device

The identifier of the target device

defaultMode

Reference in which to return the default ECC mode

Returns

- ▶ NVML_SUCCESS if current and pending have been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or default is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the default ECC modes for the device.

For Fermi or newer fully supported devices. Only applicable to devices with ECC.
Requires NVML_INFOROM_ECC version 1.0 or higher.

See [nvmlEnableState_t](#) for details on allowed modes.

See also:

[nvmlDeviceSetEccMode\(\)](#)

`nvmlReturn_t nvmlDeviceGetBoardId (nvmlDevice_t device, unsigned int *boardId)`

Parameters

device

The identifier of the target device

boardId

Reference in which to return the device's board ID

Returns

- ▶ NVML_SUCCESS if boardId has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or boardId is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the device boardId from 0-N. Devices with the same boardId indicate GPUs connected to the same PLX. Use in conjunction with `nvmlDeviceGetMultiGpuBoard()` to decide if they are on the same board as well. The boardId returned is a unique ID for the current configuration. Uniqueness and ordering across reboots and system configurations is not guaranteed (i.e. if a Tesla K40c returns 0x100 and the two GPUs on a Tesla K10 in the same system returns 0x200 it is not guaranteed they will always return those values but they will always be different from each other).

For Fermi or newer fully supported devices.

`nvmlReturn_t nvmlDeviceGetMultiGpuBoard (nvmlDevice_t device, unsigned int *multiGpuBool)`

Parameters

device

The identifier of the target device

multiGpuBool

Reference in which to return a zero or non-zero value to indicate whether the device is on a multi GPU board

Returns

- ▶ NVML_SUCCESS if multiGpuBool has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or multiGpuBool is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves whether the device is on a Multi-GPU Board Devices that are on multi-GPU boards will set multiGpuBool to a non-zero value.

For Fermi or newer fully supported devices.

**nvmlReturn_t nvmlDeviceGetTotalEccErrors
(nvmlDevice_t device, nvmlMemoryErrorType_t
errorType, nvmlEccCounterType_t counterType,
unsigned long long *eccCounts)**

Parameters**device**

The identifier of the target device

errorType

Flag that specifies the type of the errors.

counterType

Flag that specifies the counter-type of the errors.

eccCounts

Reference in which to return the specified ECC errors

Returns

- ▶ NVML_SUCCESS if eccCounts has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device, errorType or counterType is invalid, or eccCounts is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible

- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the total ECC error counts for the device.

For Fermi or newer fully supported devices. Only applicable to devices with ECC. Requires NVML_INFOROM_ECC version 1.0 or higher. Requires ECC Mode to be enabled.

The total error count is the sum of errors across each of the separate memory systems, i.e. the total set of errors across the entire device.

See [nvmlMemoryErrorType_t](#) for a description of available error types. See [nvmlEccCounterType_t](#) for a description of available counter types.

See also:

[nvmlDeviceClearEccErrorCounts\(\)](#)

**`nvmlReturn_t nvmlDeviceGetDetailedEccErrors
(nvmlDevice_t device, nvmlMemoryErrorType_t
errorType, nvmlEccCounterType_t counterType,
nvmlEccErrorCounts_t *eccCounts)`**

Parameters

device

The identifier of the target device

errorType

Flag that specifies the type of the errors.

counterType

Flag that specifies the counter-type of the errors.

eccCounts

Reference in which to return the specified ECC errors

Returns

- ▶ NVML_SUCCESS if eccCounts has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device, errorType or counterType is invalid, or eccCounts is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible

- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the detailed ECC error counts for the device.

Deprecated This API supports only a fixed set of ECC error locations On different GPU architectures different locations are supported See [nvmlDeviceGetMemoryErrorCounter](#)

For Fermi or newer fully supported devices. Only applicable to devices with ECC. Requires NVML_INFOM_ECC version 2.0 or higher to report aggregate location-based ECC counts. Requires NVML_INFOM_ECC version 1.0 or higher to report all other ECC counts. Requires ECC Mode to be enabled.

Detailed errors provide separate ECC counts for specific parts of the memory system.

Reports zero for unsupported ECC error counters when a subset of ECC error counters are supported.

See [nvmlMemoryErrorType_t](#) for a description of available bit types. See [nvmlEccCounterType_t](#) for a description of available counter types. See [nvmlEccErrorCounts_t](#) for a description of provided detailed ECC counts.

See also:

[nvmlDeviceClearEccErrorCounts\(\)](#)

**nvmlReturn_t nvmlDeviceGetMemoryErrorCounter
(nvmlDevice_t device, nvmlMemoryErrorType_t
errorType, nvmlEccCounterType_t counterType,
nvmlMemoryLocation_t locationType, unsigned long long
*count)**

Parameters

device

The identifier of the target device

errorType

Flag that specifies the type of error.

counterType

Flag that specifies the counter-type of the errors.

locationType

Specifies the location of the counter.

count

Reference in which to return the ECC counter

Returns

- ▶ NVML_SUCCESS if count has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device, bitType, counterType or locationType is invalid, or count is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support ECC error reporting in the specified memory
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the requested memory error counter for the device.

For Fermi or newer fully supported devices. Requires NVML_INFOMR_ECC version 2.0 or higher to report aggregate location-based memory error counts. Requires NVML_INFOMR_ECC version 1.0 or higher to report all other memory error counts.

Only applicable to devices with ECC.

Requires ECC Mode to be enabled.

On MIG-enabled GPUs, per instance information can be queried using specific MIG device handles. Per instance information is currently only supported for non-DRAM uncorrectable volatile errors. Querying volatile errors using device handles is currently not supported.

See [nvmlMemoryErrorType_t](#) for a description of available memory error types.

See [nvmlEccCounterType_t](#) for a description of available counter types. See [nvmlMemoryLocation_t](#) for a description of available counter locations.

nvmlReturn_t nvmlDeviceGetUtilizationRates (nvmlDevice_t device, nvmlUtilization_t *utilization)

Parameters

device

The identifier of the target device

utilization

Reference in which to return the utilization information

Returns

- ▶ NVML_SUCCESS if utilization has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or utilization is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the current utilization rates for the device's major subsystems.

For Fermi or newer fully supported devices.

See [nvmlUtilization_t](#) for details on available utilization rates.

- ▶ During driver initialization when ECC is enabled one can see high GPU and Memory Utilization readings. This is caused by ECC Memory Scrubbing mechanism that is performed during driver initialization.
- ▶ On MIG-enabled GPUs, querying device utilization rates is not currently supported.

[nvmlReturn_t nvmlDeviceGetEncoderUtilization](#) ([nvmlDevice_t device](#), [unsigned int *utilization](#), [unsigned int *samplingPeriodUs](#))

Parameters**device**

The identifier of the target device

utilization

Reference to an unsigned int for encoder utilization info

samplingPeriodUs

Reference to an unsigned int for the sampling period in US

Returns

- ▶ NVML_SUCCESS if utilization has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, utilization is NULL, or samplingPeriodUs is NULL

- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the current utilization and sampling size in microseconds for the Encoder For Kepler or newer fully supported devices.

On MIG-enabled GPUs, querying encoder utilization is not currently supported.

**nvmlReturn_t nvmlDeviceGetEncoderCapacity
(nvmlDevice_t device, nvmlEncoderType_t
encoderQueryType, unsigned int *encoderCapacity)**

Parameters

device

The identifier of the target device

encoderQueryType

Type of encoder to query

encoderCapacity

Reference to an unsigned int for the encoder capacity

Returns

- ▶ NVML_SUCCESS if encoderCapacity is fetched
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if encoderCapacity is NULL, or device or encoderQueryType are invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if device does not support the encoder specified in encodeQueryType
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the current capacity of the device's encoder, as a percentage of maximum encoder capacity with valid values in the range 0-100.

For Maxwell or newer fully supported devices.

nvmlReturn_t nvmlDeviceGetEncoderStats (nvmlDevice_t device, unsigned int *sessionCount, unsigned int *averageFps, unsigned int *averageLatency)

Parameters

device

The identifier of the target device

sessionCount

Reference to an unsigned int for count of active encoder sessions

averageFps

Reference to an unsigned int for trailing average FPS of all active sessions

averageLatency

Reference to an unsigned int for encode latency in microseconds

Returns

- ▶ NVML_SUCCESS if sessionCount, averageFps and averageLatency is fetched
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if sessionCount, or device or averageFps, or averageLatency is NULL
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the current encoder statistics for a given device.

For Maxwell or newer fully supported devices.

nvmlReturn_t nvmlDeviceGetEncoderSessions (nvmlDevice_t device, unsigned int *sessionCount, nvmlEncoderSessionInfo_t *sessionInfos)

Parameters

device

The identifier of the target device

sessionCount

Reference to caller supplied array size, and returns the number of sessions.

sessionInfos

Reference in which to return the session information

Returns

- ▶ NVML_SUCCESS if sessionInfos is fetched
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if sessionCount is too small, array element count is returned in sessionCount
- ▶ NVML_ERROR_INVALID_ARGUMENT if sessionCount is NULL.
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by device
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves information about active encoder sessions on a target device.

An array of active encoder sessions is returned in the caller-supplied buffer pointed at by sessionInfos. The array element count is passed in sessionCount, and sessionCount is used to return the number of sessions written to the buffer.

If the supplied buffer is not large enough to accommodate the active session array, the function returns NVML_ERROR_INSUFFICIENT_SIZE, with the element count of `nvmlEncoderSessionInfo_t` array required in sessionCount. To query the number of active encoder sessions, call this function with *sessionCount = 0. The code will return NVML_SUCCESS with number of active encoder sessions updated in *sessionCount.

For Maxwell or newer fully supported devices.

`nvmlReturn_t nvmlDeviceGetDecoderUtilization (nvmlDevice_t device, unsigned int *utilization, unsigned int *samplingPeriodUs)`

Parameters**device**

The identifier of the target device

utilization

Reference to an unsigned int for decoder utilization info

samplingPeriodUs

Reference to an unsigned int for the sampling period in US

Returns

- ▶ NVML_SUCCESS if utilization has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, utilization is NULL, or samplingPeriodUs is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the current utilization and sampling size in microseconds for the Decoder

For Kepler or newer fully supported devices.

On MIG-enabled GPUs, querying decoder utilization is not currently supported.

nvmlReturn_t nvmlDeviceGetJpgUtilization (nvmlDevice_t device, unsigned int *utilization, unsigned int *samplingPeriodUs)

Parameters**device**

The identifier of the target device

utilization

Reference to an unsigned int for jpg utilization info

samplingPeriodUs

Reference to an unsigned int for the sampling period in US

Returns

- ▶ NVML_SUCCESS if utilization has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, utilization is NULL, or samplingPeriodUs is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature

- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the current utilization and sampling size in microseconds for the JPG For Turing or newer fully supported devices.

On MIG-enabled GPUs, querying decoder utilization is not currently supported.

**`nvmlReturn_t nvmlDeviceGetOfaUtilization
(nvmlDevice_t device, unsigned int *utilization,
unsigned int *samplingPeriodUs)`**

Parameters

device

The identifier of the target device

utilization

Reference to an unsigned int for ofa utilization info

samplingPeriodUs

Reference to an unsigned int for the sampling period in US

Returns

- ▶ NVML_SUCCESS if utilization has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, utilization is NULL, or samplingPeriodUs is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the current utilization and sampling size in microseconds for the OFA (Optical Flow Accelerator)

For Turing or newer fully supported devices.

On MIG-enabled GPUs, querying decoder utilization is not currently supported.

`nvmlReturn_t nvmlDeviceGetFBCStats (nvmlDevice_t device, nvmlFBCStats_t *fbcStats)`

Parameters

device

The identifier of the target device

fbcStats

Reference to `nvmlFBCStats_t` structure containing NvFBC stats

Returns

- ▶ NVML_SUCCESS if fbcStats is fetched
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if fbcStats is NULL
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the active frame buffer capture sessions statistics for a given device.

For Maxwell or newer fully supported devices.

`nvmlReturn_t nvmlDeviceGetFBCSessions (nvmlDevice_t device, unsigned int *sessionCount, nvmlFBCSessionInfo_t *sessionInfo)`

Parameters

device

The identifier of the target device

sessionCount

Reference to caller supplied array size, and returns the number of sessions.

sessionInfo

Reference in which to return the session information

Returns

- ▶ NVML_SUCCESS if sessionInfo is fetched
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if sessionCount is too small, array element count is returned in sessionCount
- ▶ NVML_ERROR_INVALID_ARGUMENT if sessionCount is NULL.
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves information about active frame buffer capture sessions on a target device.

An array of active FBC sessions is returned in the caller-supplied buffer pointed at by sessionInfo. The array element count is passed in sessionCount, and sessionCount is used to return the number of sessions written to the buffer.

If the supplied buffer is not large enough to accommodate the active session array, the function returns NVML_ERROR_INSUFFICIENT_SIZE, with the element count of `nvmlFBCSessionInfo_t` array required in sessionCount. To query the number of active FBC sessions, call this function with *sessionCount = 0. The code will return NVML_SUCCESS with number of active FBC sessions updated in *sessionCount.

For Maxwell or newer fully supported devices.

hResolution, vResolution, averageFPS and averageLatency data for a FBC session returned in sessionInfo may be zero if there are no new frames captured since the session started.

**`nvmlReturn_t nvmlDeviceGetDriverModel_v2
(nvmlDevice_t device, nvmlDriverModel_t *current,
nvmlDriverModel_t *pending)`**

Parameters

device

The identifier of the target device

current

Reference in which to return the current driver model

pending

Reference in which to return the pending driver model

Returns

- ▶ NVML_SUCCESS if either current and/or pending have been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or both current and pending are NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the platform is not windows
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the current and pending driver model for the device.

For Kepler or newer fully supported devices. For windows only.

On Windows platforms the device driver can run in either WDDM, MCDM or WDM (TCC) modes. If a display is attached to the device it must run in WDDM mode. MCDM mode is preferred if a display is not attached. TCC mode is deprecated.

See [nvmlDriverModel_t](#) for details on available driver models.

[nvmlDeviceSetDriverModel_v2\(\)](#)

nvmlReturn_t nvmlDeviceGetVbiosVersion (nvmlDevice_t device, char *version, unsigned int length)

Parameters**device**

The identifier of the target device

version

Reference to which to return the VBIOS version

length

The maximum allowed length of the string returned in version

Returns

- ▶ NVML_SUCCESS if version has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, or version is NULL
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if length is too small

- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Get VBIOS version of the device.

For all products.

The VBIOS version may change from time to time. It will not exceed 32 characters in length (including the NULL terminator). See [nvmlConstants::NVML_DEVICE_VBIOS_VERSION_BUFFER_SIZE](#).

nvmlReturn_t nvmlDeviceGetBridgeChipInfo (nvmlDevice_t device, nvmlBridgeChipHierarchy_t *bridgeHierarchy)

Parameters

device

The identifier of the target device

bridgeHierarchy

Reference to the returned bridge chip Hierarchy

Returns

- ▶ NVML_SUCCESS if bridge chip exists
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, or bridgeInfo is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if bridge chip not supported on the device
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Get Bridge Chip Information for all the bridge chips on the board.

For all fully supported products. Only applicable to multi-GPU products.

nvmlReturn_t nvmlDeviceGetComputeRunningProcesses_v3

(nvmlDevice_t device, unsigned int *infoCount, nvmlProcessInfo_t *infos)

Parameters

device

The device handle or MIG device handle

infoCount

Reference in which to provide the infos array size, and to return the number of returned elements

infos

Reference in which to return the process information

Returns

- ▶ NVML_SUCCESS if infoCount and infos have been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if infoCount indicates that the infos array is too small infoCount will contain minimal amount of space necessary for the call to complete
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to perform this operation
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, either of infoCount or infos is NULL
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by device
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Get information about processes with a compute context on a device

For Fermi or newer fully supported devices.

This function returns information only about compute running processes (e.g. CUDA application which have active context). Any graphics applications (e.g. using OpenGL, DirectX) won't be listed by this function.

To query the current number of running compute processes, call this function with *infoCount = 0. The return code will be NVML_ERROR_INSUFFICIENT_SIZE, or NVML_SUCCESS if none are running. For this call infos is allowed to be NULL.

The usedGpuMemory field returned is all of the memory used by the application.

Keep in mind that information returned by this call is dynamic and the number of elements might change in time. Allocate more space for infos table in case new compute processes are spawned.

In MIG mode, if device handle is provided, the API returns aggregate information, only if the caller has appropriate privileges. Per-instance information can be queried by using specific MIG device handles. Querying per-instance information using MIG device handles is not supported if the device is in vGPU Host virtualization mode.

[nvmlSystemGetProcessName](#)

nvmlReturn_t

nvmlDeviceGetGraphicsRunningProcesses_v3 (nvmlDevice_t device, unsigned int *infoCount, nvmlProcessInfo_t *infos)

Parameters

device

The device handle or MIG device handle

infoCount

Reference in which to provide the infos array size, and to return the number of returned elements

infos

Reference in which to return the process information

Returns

- ▶ NVML_SUCCESS if infoCount and infos have been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if infoCount indicates that the infos array is too small infoCount will contain minimal amount of space necessary for the call to complete
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to perform this operation
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, either of infoCount or infos is NULL
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by device

- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Get information about processes with a graphics context on a device

For Kepler or newer fully supported devices.

This function returns information only about graphics based processes (eg. applications using OpenGL, DirectX)

To query the current number of running graphics processes, call this function with *infoCount = 0. The return code will be NVML_ERROR_INSUFFICIENT_SIZE, or NVML_SUCCESS if none are running. For this call infos is allowed to be NULL.

The usedGpuMemory field returned is all of the memory used by the application.

Keep in mind that information returned by this call is dynamic and the number of elements might change in time. Allocate more space for infos table in case new graphics processes are spawned.

In MIG mode, if device handle is provided, the API returns aggregate information, only if the caller has appropriate privileges. Per-instance information can be queried by using specific MIG device handles. Querying per-instance information using MIG device handles is not supported if the device is in vGPU Host virtualization mode.

[nvmlSystemGetProcessName](#)

nvmlReturn_t

nvmlDeviceGetMPSComputeRunningProcesses_v3

(**nvmlDevice_t** device, **unsigned int** *infoCount,
nvmlProcessInfo_t *infos)

Parameters

device

The device handle or MIG device handle

infoCount

Reference in which to provide the infos array size, and to return the number of returned elements

infos

Reference in which to return the process information

Returns

- ▶ NVML_SUCCESS if infoCount and infos have been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if infoCount indicates that the infos array is too small infoCount will contain minimal amount of space necessary for the call to complete
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, either of infoCount or infos is NULL
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by device
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Get information about processes with a Multi-Process Service (MPS) compute context on a device

For Volta or newer fully supported devices.

This function returns information only about compute running processes (e.g. CUDA application which have active context) utilizing MPS. Any graphics applications (e.g. using OpenGL, DirectX) won't be listed by this function.

To query the current number of running compute processes, call this function with *infoCount = 0. The return code will be NVML_ERROR_INSUFFICIENT_SIZE, or NVML_SUCCESS if none are running. For this call infos is allowed to be NULL.

The usedGpuMemory field returned is all of the memory used by the application.

Keep in mind that information returned by this call is dynamic and the number of elements might change in time. Allocate more space for infos table in case new compute processes are spawned.

In MIG mode, if device handle is provided, the API returns aggregate information, only if the caller has appropriate privileges. Per-instance information can be queried by using specific MIG device handles. Querying per-instance information using MIG device handles is not supported if the device is in vGPU Host virtualization mode.

See also:

[nvmlSystemGetProcessName](#)

nvmlReturn_t nvmlDeviceGetRunningProcessDetailList (nvmlDevice_t device, nvmlProcessDetailList_t *plist)

Parameters

device

The device handle or MIG device handle

plist

Reference in which to process detail list plist->version The api version plist->mode

The process mode plist->procArray Reference in which to return the process

information plist->numProcArrayEntries Proc array size of returned entries

Returns

- ▶ NVML_SUCCESS if plist->numprocArrayEntries and plist->procArray have been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if plist->numprocArrayEntries indicates that the plist->procArray is too small plist->numprocArrayEntries will contain minimal amount of space necessary for the call to complete
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to perform this operation
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, plist is NULL, plist->version is invalid, plist->mode is invalid,
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by device
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Get information about running processes on a device for input context

For Hopper or newer fully supported devices.

This function returns information only about running processes (e.g. CUDA application which have active context).

To determine the size of the plist->procArray array to allocate, call the function with plist->numProcArrayEntries set to zero and plist->procArray set to NULL. The return code will be either NVML_ERROR_INSUFFICIENT_SIZE (if there are valid processes of type plist->mode to report on, in which case the plist->numProcArrayEntries field will indicate the required number of entries in the array) or NVML_SUCCESS (if no processes of type plist->mode exist).

The usedGpuMemory field returned is all of the memory used by the application. The usedGpuCcProtectedMemory field returned is all of the protected memory used by the application.

Keep in mind that information returned by this call is dynamic and the number of elements might change in time. Allocate more space for plist->procArray table in case new processes are spawned.

In MIG mode, if device handle is provided, the API returns aggregate information, only if the caller has appropriate privileges. Per-instance information can be queried by using specific MIG device handles. Querying per-instance information using MIG device handles is not supported if the device is in vGPU Host virtualization mode. Protected memory usage is currently not available in MIG mode and in windows.

`nvmlReturn_t nvmlDeviceOnSameBoard (nvmlDevice_t device1, nvmlDevice_t device2, int *onSameBoard)`

Parameters

`device1`

The first GPU device

`device2`

The second GPU device

`onSameBoard`

Reference in which to return the status. Non-zero indicates that the GPUs are on the same board.

Returns

- ▶ NVML_SUCCESS if onSameBoard has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if dev1 or dev2 are invalid or onSameBoard is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this check is not supported by the device
- ▶ NVML_ERROR_GPU_IS_LOST if the either GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Check if the GPU devices are on the same physical board.

For all fully supported products.

**nvmlReturn_t nvmlDeviceGetAPIRestriction
(nvmlDevice_t device, nvmlRestrictedAPI_t apiType,
nvmlEnableState_t *isRestricted)**

Parameters

device

The identifier of the target device

apiType

Target API type for this operation

isRestricted

Reference in which to return the current restriction NVML_FEATURE_ENABLED indicates that the API is root-only NVML_FEATURE_DISABLED indicates that the API is accessible to all users

Returns

- ▶ NVML_SUCCESS if isRestricted has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, apiType incorrect or isRestricted is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device or the device does not support the feature that is being queried (E.G. Enabling/disabling Auto Boosted clocks is not supported by the device)
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the root/admin permissions on the target API. See nvmlRestrictedAPI_t for the list of supported APIs. If an API is restricted only root users can call that API. See nvmlDeviceSetAPIRestriction to change current permissions.

For all fully supported products.

See also:

[nvmlRestrictedAPI_t](#)

**nvmlReturn_t nvmlDeviceGetSamples (nvmlDevice_t
device, nvmlSamplingType_t type, unsigned long long**

**lastSeenTimeStamp, nvmlValueType_t *sampleValType,
unsigned int *sampleCount, nvmlSample_t *samples)**

Parameters

device

The identifier for the target device

type

Type of sampling event

lastSeenTimeStamp

Return only samples with timestamp greater than lastSeenTimeStamp.

sampleValType

Output parameter to represent the type of sample value as described in
nvmlSampleVal_t

sampleCount

Reference to provide the number of elements which can be queried in samples array

samples

Reference in which samples are returned

Returns

- ▶ NVML_SUCCESS if samples are successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, samplesCount is NULL or reference to sampleCount is 0 for non null samples
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_NOT_FOUND if sample entries are not found
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Gets recent samples for the GPU.

For Kepler or newer fully supported devices.

Based on type, this method can be used to fetch the power, utilization or clock samples maintained in the buffer by the driver.

Power, Utilization and Clock samples are returned as type "unsigned int" for the union
nvmlValueType_t.

To get the size of samples that user needs to allocate, the method is invoked with samples set to NULL. The returned samplesCount will provide the number of samples

that can be queried. The user needs to allocate the buffer with size as `samplesCount * sizeof(nvmlSample_t)`.

`lastSeenTimeStamp` represents CPU timestamp in microseconds. Set it to 0 to fetch all the samples maintained by the underlying buffer. Set `lastSeenTimeStamp` to one of the `timeStamps` retrieved from the date of the previous query to get more recent samples.

This method fetches the number of entries which can be accommodated in the provided `samples` array, and the reference `samplesCount` is updated to indicate how many samples were actually retrieved. The advantage of using this method for samples in contrast to polling via existing methods is to get higher frequency data at lower polling cost.

On MIG-enabled GPUs, querying the following sample types, `NVML_GPU_UTILIZATION_SAMPLES`, `NVML_MEMORY_UTILIZATION_SAMPLES`, `NVML_ENC_UTILIZATION_SAMPLES` and `NVML_DEC_UTILIZATION_SAMPLES`, is not currently supported.

`nvmlReturn_t nvmlDeviceGetBAR1MemoryInfo (nvmlDevice_t device, nvmlBAR1Memory_t *bar1Memory)`

Parameters

`device`

The identifier of the target device

`bar1Memory`

Reference in which BAR1 memory information is returned.

Returns

- ▶ `NVML_SUCCESS` if BAR1 memory is successfully retrieved
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if `device` is invalid, `bar1Memory` is `NULL`
- ▶ `NVML_ERROR_NOT_SUPPORTED` if this query is not supported by the device
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Gets Total, Available and Used size of BAR1 memory.

BAR1 is used to map the FB (device memory) so that it can be directly accessed by the CPU or by 3rd party devices (peer-to-peer on the PCIE bus).

In MIG mode, if device handle is provided, the API returns aggregate information, only if the caller has appropriate privileges. Per-instance information can be queried by using specific MIG device handles.

For Kepler or newer fully supported devices.

`nvmlReturn_t nvmlDeviceGetViolationStatus (nvmlDevice_t device, nvmlPerfPolicyType_t perfPolicyType, nvmlViolationTime_t *violTime)`

Description

Deprecated Use [nvmlDeviceGetFieldValues](#) to query this data. This API will be removed in CUDA 14.0.

Translations are as follows:

```
NVML_PERF_POLICY_POWER ->
NVML_FI_DEV_CLOCKS_EVENT_REASON_SW_POWER_CAP
NVML_PERF_POLICY_THERMAL ->
NVML_FI_DEV_CLOCKS_EVENT_REASON_SW_THERM_SLOWDOWN
NVML_PERF_POLICY_SYNC_BOOST ->
NVML_FI_DEV_CLOCKS_EVENT_REASON_SYNC_BOOST
NVML_PERF_POLICY_BOARD_LIMIT ->
NVML_FI_DEV_PERF_POLICY_BOARD_LIMIT
NVML_PERF_POLICY_LOW_UTILIZATION ->
NVML_FI_DEV_PERF_POLICY_LOW_UTILIZATION
NVML_PERF_POLICY_RELIABILITY -> NVML_FI_DEV_PERF_POLICY_RELIABILITY
NVML_PERF_POLICY_TOTAL_APP_CLOCKS -> DEPRECATED,
Do not use NVML_PERF_POLICY_TOTAL_BASE_CLOCKS ->
NVML_FI_DEV_PERF_POLICY_TOTAL_BASE_CLOCKS
```

`nvmlReturn_t nvmlDeviceGetIRQNum (nvmlDevice_t device, unsigned int *irqNum)`

Parameters

`device`

The identifier of the target device

irqNum

The interrupt number associated with the specified device

Returns

- ▶ NVML_SUCCESS if irq number is successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, or irqNum is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible

Description

Gets the device's interrupt number

nvmlReturn_t nvmlDeviceGetNumGpuCores (nvmlDevice_t device, unsigned int *numCores)

Parameters**device**

The identifier of the target device

numCores

The number of cores for the specified device

Returns

- ▶ NVML_SUCCESS if GPU core count is successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, or numCores is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device or a mig device.
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible

Description

Gets the device's core count

On MIG-enabled GPUs, querying the device's core count is currently not supported using this API. Please use [nvmlDeviceGetGpuInstanceProfileInfo](#) to fetch the MIG device's core count.

nvmlReturn_t nvmlDeviceGetPowerSource (nvmlDevice_t device, nvmlPowerSource_t *powerSource)

Parameters

device

The identifier of the target device

powerSource

The power source of the device

Returns

- ▶ NVML_SUCCESS if the current power source was successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, or powerSource is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible

Description

Gets the devices power source

nvmlReturn_t nvmlDeviceGetMemoryBusWidth (nvmlDevice_t device, unsigned int *busWidth)

Parameters

device

The identifier of the target device

busWidth

The devices's memory bus width

Returns

- ▶ NVML_SUCCESS if the memory bus width is successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, or busWidth is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device

- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible

Description

Gets the device's memory bus width

nvmlReturn_t nvmlDeviceGetPcieLinkMaxSpeed (nvmlDevice_t device, unsigned int *maxSpeed)

Parameters

device

The identifier of the target device

maxSpeed

The devices's PCIE Max Link speed in MBPS

Returns

- ▶ NVML_SUCCESS if PCIe Max Link Speed is successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, or maxSpeed is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible

Description

Gets the device's PCIE Max Link speed in MBPS

nvmlReturn_t nvmlDeviceGetPcieSpeed (nvmlDevice_t device, unsigned int *pcieSpeed)

Parameters

device

The identifier of the target device

pcieSpeed

The devices's PCIe Max Link speed in Mbps

Returns

- ▶ NVML_SUCCESS if pcieSpeed has been retrieved

- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or pcieSpeed is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support PCIe speed getting
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Gets the device's PCIe Link speed in Mbps

**nvmlReturn_t nvmlDeviceGetAdaptiveClockInfoStatus
(nvmlDevice_t device, unsigned int
*adaptiveClockStatus)**

Parameters

device

The identifier of the target device

adaptiveClockStatus

The current adaptive clocking status, either

NVML_ADAPTIVE_CLOCKING_INFO_STATUS_DISABLED or
NVML_ADAPTIVE_CLOCKING_INFO_STATUS_ENABLED

Returns

- ▶ NVML_SUCCESS if the current adaptive clocking status is successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, or adaptiveClockStatus is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible

Description

Gets the device's Adaptive Clock status

`nvmlReturn_t nvmlDeviceGetBusType (nvmlDevice_t device, nvmlBusType_t *type)`

Parameters

device

The identifier of the target device

type

The PCI Bus type

Description

Get the type of the GPU Bus (PCIe, PCI, ...)

return

- ▶ `NVML_SUCCESS` if the bus type is successfully retrieved
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid or type is NULL
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

`nvmlReturn_t nvmlDeviceGetGpuFabricInfo (nvmlDevice_t device, nvmlGpuFabricInfo_t *gpuFabricInfo)`

Parameters

device

The identifier of the target device

gpuFabricInfo

Information about GPU fabric state

Returns

- ▶ `NVML_SUCCESS` Upon success
- ▶ `NVML_ERROR_NOT_SUPPORTED` If device doesn't support gpu fabric

Description

Deprecated Will be deprecated in a future release. Use `nvmlDeviceGetGpuFabricInfoV` instead

Get fabric information associated with the device.

For Hopper or newer fully supported devices.

On Hopper + NVSwitch systems, GPU is registered with the NVIDIA Fabric Manager. Upon successful registration, the GPU is added to the NVLink fabric to enable peer-to-peer communication. This API reports the current state of the GPU in the NVLink fabric along with other useful information.

nvmlReturn_t nvmlDeviceGetGpuFabricInfoV (nvmlDevice_t device, nvmlGpuFabricInfoV_t *gpuFabricInfo)

Parameters

device

The identifier of the target device

gpuFabricInfo

Information about GPU fabric state

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_NOT_SUPPORTED If device doesn't support gpu fabric

Description

Versioned wrapper around `nvmlDeviceGetGpuFabricInfo` that accepts a versioned `nvmlGpuFabricInfo_v2_t` or later output structure.

 The caller must set the `nvmlGpuFabricInfoV_t::version` field to the appropriate version prior to calling this function. For example:

```
nvmlGpuFabricInfoV_t fabricInfo =
    { .version = nvmlGpuFabricInfo_v2 };
nvmlReturn_t result
= nvmlDeviceGetGpuFabricInfoV(device, &fabricInfo);
```

For Hopper or newer fully supported devices.

nvmlReturn_t nvmlSystemGetConfComputeCapabilities (nvmlConfComputeSystemCaps_t *capabilities)

Parameters

capabilities

System CC capabilities

Returns

- ▶ NVML_SUCCESS if capabilities were successfully queried
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if capabilities is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device

Description

Get Conf Computing System capabilities.

For Ampere or newer fully supported devices. Supported on Linux, Windows TCC.

nvmlReturn_t nvmlSystemGetConfComputeState (nvmlConfComputeSystemState_t *state)

Parameters**state**

System CC State

Returns

- ▶ NVML_SUCCESS if state were successfully queried
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if state is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device

Description

Get Conf Computing System State.

For Ampere or newer fully supported devices. Supported on Linux, Windows TCC.

nvmlReturn_t nvmlDeviceGetConfComputeMemSizeInfo (nvmlDevice_t device, nvmlConfComputeMemSizeInfo_t *memInfo)

Parameters**device**

Device handle

memInfo

Protected/Unprotected Memory sizes

Returns

- ▶ NVML_SUCCESS if memInfo were successfully queried
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if memInfo or device is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device

Description

Get Conf Computing Protected and Unprotected Memory Sizes.

For Ampere or newer fully supported devices. Supported on Linux, Windows TCC.

nvmlReturn_t**nvmlSystemGetConfComputeGpusReadyState (unsigned int *isAcceptingWork)****Parameters****isAcceptingWork**

Returns GPU current work accepting state,
 NVML_CC_ACCEPTING_CLIENT_REQUESTS_TRUE or
 NVML_CC_ACCEPTING_CLIENT_REQUESTS_FALSE

Description

Get Conf Computing GPUs ready state.

For Ampere or newer fully supported devices. Supported on Linux, Windows TCC.

return

- ▶ NVML_SUCCESS if current GPUs ready state were successfully queried
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if isAcceptingWork is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device

nvmlReturn_t**nvmlDeviceGetConfComputeProtectedMemoryUsage (nvmlDevice_t device, nvmlMemory_t *memory)****Parameters****device**

The identifier of the target device

memory

Reference in which to return the memory information

Returns

- ▶ NVML_SUCCESS if memory has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or memory is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Get Conf Computing protected memory usage.

For Ampere or newer fully supported devices. Supported on Linux, Windows TCC.

`nvmlReturn_t`**`nvmlDeviceGetConfComputeGpuCertificate`**

(`nvmlDevice_t device`,

`nvmlConfComputeGpuCertificate_t *gpuCert`)

Parameters**`device`**

The identifier of the target device

`gpuCert`

Reference in which to return the gpu certificate information

Returns

- ▶ NVML_SUCCESS if gpu certificate info has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or memory is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Get Conf Computing GPU certificate details.

For Ampere or newer fully supported devices. Supported on Linux, Windows TCC.

```
nvmlReturn_t  
nvmlDeviceGetConfComputeGpuAttestationReport  
(nvmlDevice_t device,  
nvmlConfComputeGpuAttestationReport_t  
*gpuAtstReport)
```

Parameters

device

The identifier of the target device

gpuAtstReport

Reference in which to return the gpu attestation report

Returns

- ▶ NVML_SUCCESS if gpu attestation report has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or memory is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Get Conf Computing GPU attestation report.

For Ampere or newer fully supported devices. Supported on Linux, Windows TCC.

```
nvmlReturn_t  
nvmlSystemGetConfComputeKeyRotationThresholdInfo  
(nvmlConfComputeGetKeyRotationThresholdInfo_t  
*pKeyRotationThrInfo)
```

Parameters

pKeyRotationThrInfo

Reference in which to return the key rotation threshold data

Returns

- ▶ NVML_SUCCESS if gpu key rotation threshold info has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized

- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or memory is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Get Conf Computing key rotation threshold detail.

For Hopper or newer fully supported devices. Supported on Linux, Windows TCC.

nvmlReturn_t

nvmlDeviceSetConfComputeUnprotectedMemSize

(nvmlDevice_t device, unsigned long long sizeKiB)

Parameters

device

Device Handle

sizeKiB

Unprotected Memory size to be set in KiB

Returns

- ▶ NVML_SUCCESS if sizeKiB successfully set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device

Description

Set Conf Computing Unprotected Memory Size.

For Ampere or newer fully supported devices. Supported on Linux, Windows TCC.

nvmlReturn_t

nvmlSystemSetConfComputeGpusReadyState (unsigned int isAcceptingWork)

Parameters

isAcceptingWork

GPU accepting new work, NVML_CC_ACCEPTING_CLIENT_REQUESTS_TRUE or
NVML_CC_ACCEPTING_CLIENT_REQUESTS_FALSE

Description

Set Conf Computing GPUs ready state.

For Ampere or newer fully supported devices. Supported on Linux, Windows TCC.

return

- ▶ NVML_SUCCESS if current GPUs ready state is successfully set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if isAcceptingWork is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device

nvmlReturn_t

nvmlSystemSetConfComputeKeyRotationThresholdInfo
(nvmlConfComputeSetKeyRotationThresholdInfo_t
`*pKeyRotationThrInfo)`

Parameters

pKeyRotationThrInfo

Reference to the key rotation threshold data

Returns

- ▶ NVML_SUCCESS if key rotation threshold max attacker advantage has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or memory is NULL
- ▶ NVML_ERROR_INVALID_STATE if confidential compute GPU ready state is enabled
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Set Conf Computing key rotation threshold.

For Hopper or newer fully supported devices. Supported on Linux, Windows TCC.

This function is to set the confidential compute key rotation threshold parameters.

pKeyRotationThrInfo->maxAttackerAdvantage should be in the range from

NVML_CC_KEY_ROTATION_THRESHOLD_ATTACKER_ADVANTAGE_MIN to

NVML_CC_KEY_ROTATION_THRESHOLD_ATTACKER_ADVANTAGE_MAX.

Default value is 60.

`nvmlReturn_t nvmlSystemGetConfComputeSettings (nvmlSystemConfComputeSettings_t *settings)`

Parameters

settings

System CC settings

Returns

- ▶ NVML_SUCCESS If the query is success
- ▶ NVML_ERROR_UNINITIALIZED If the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device is invalid or counters is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED If the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST If the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the provided version is invalid/unsupported
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Get Conf Computing System Settings.

For Hopper or newer fully supported devices. Supported on Linux, Windows TCC.

`nvmlReturn_t nvmlDeviceGetGspFirmwareVersion (nvmlDevice_t device, char *version)`

Parameters

device

Device handle

version

The retrieved GSP firmware version

Returns

- ▶ NVML_SUCCESS if GSP firmware version is sucessfully retrieved
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or GSP version pointer is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if GSP firmware is not enabled for GPU
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve GSP firmware version.

The caller passes in buffer via version and corresponding GSP firmware numbered version is returned with the same parameter in string format.

**nvmlReturn_t nvmlDeviceGetGspFirmwareMode
(nvmlDevice_t device, unsigned int *isEnabled, unsigned int *defaultMode)**

Parameters

device

Device handle

isEnabled

Pointer to specify if GSP firmware is enabled

defaultMode

Pointer to specify if GSP firmware is supported by default on device

Returns

- ▶ NVML_SUCCESS if GSP firmware mode is sucessfully retrieved
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or any of isEnabled or defaultMode is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if GSP firmware is not enabled for GPU
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve GSP firmware mode.

The caller passes in integer pointers. GSP firmware enablement and default mode information is returned with corresponding parameters. The return value in isEnabled and defaultMode should be treated as boolean.

`nvmlReturn_t nvmlDeviceGetSramEccErrorStatus (nvmlDevice_t device, nvmlEccSramErrorStatus_t *status)`

Parameters

device

The identifier of the target device

status

Returns SRAM ECC error status

Returns

- ▶ NVML_SUCCESS If limit has been set
- ▶ NVML_ERROR_UNINITIALIZED If the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device is invalid or counters is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED If the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST If the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the version of nvmlEccSramErrorStatus_t is invalid
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Get SRAM ECC error status of this device.

For Ampere or newer fully supported devices. Requires root/admin permissions.

See [nvmlEccSramErrorStatus_v1_t](#) for more information on the struct.

`nvmlReturn_t nvmlDeviceSetPowerManagementLimit_v2 (nvmlDevice_t device, nvmlPowerValue_v2_t *powerValue)`

Parameters

device

The identifier of the target device

powerValue

Power management limit in milliwatts to set

Returns

- ▶ NVML_SUCCESS if limit has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or powerValue is NULL or contains invalid values
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Set new power limit of this device.

For Kepler or newer fully supported devices. Requires root/admin permissions.

See [nvmlDeviceGetPowerManagementLimitConstraints](#) to check the allowed ranges of values.

See [nvmlPowerValue_v2_t](#) for more information on the struct.

Limit is not persistent across reboots or driver unloads. Enable persistent mode to prevent driver from unloading when no application is using the device.

This API replaces `nvmlDeviceSetPowerManagementLimit`. It can be used as a drop-in replacement for the older version.

[NVML_FI_DEV_POWER_CURRENT_LIMIT](#)

**`nvmlReturn_t nvmlDeviceGetRetiredPages
(nvmlDevice_t device, nvmlPageRetirementCause_t`**

cause, unsigned int *pageCount, unsigned long long *addresses)

Parameters

device

The identifier of the target device

cause

Filter page addresses by cause of retirement

pageCount

Reference in which to provide the addresses buffer size, and to return the number of retired pages that match cause Set to 0 to query the size without allocating an addresses buffer

addresses

Buffer to write the page addresses into

Returns

- ▶ NVML_SUCCESS if pageCount was populated and addresses was filled
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if pageCount indicates the buffer is not large enough to store all the matching page addresses. pageCount is set to the needed size.
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, pageCount is NULL, cause is invalid, or addresses is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Returns the list of retired pages by source, including pages that are pending retirement. The address information provided from this API is the hardware address of the page that was retired. Note that this does not match the virtual address used in CUDA, but will match the address information in Xid 63

For Kepler or newer fully supported devices.

**nvmlReturn_t nvmlDeviceGetRetiredPages_v2
(nvmlDevice_t device, nvmlPageRetirementCause_t**

cause, unsigned int *pageCount, unsigned long long *addresses, unsigned long long *timestamps)

Parameters

device

The identifier of the target device

cause

Filter page addresses by cause of retirement

pageCount

Reference in which to provide the addresses buffer size, and to return the number of retired pages that match cause Set to 0 to query the size without allocating an addresses buffer

addresses

Buffer to write the page addresses into

timestamps

Buffer to write the timestamps of page retirement, additional for _v2

Returns

- ▶ NVML_SUCCESS if pageCount was populated and addresses was filled
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if pageCount indicates the buffer is not large enough to store all the matching page addresses. pageCount is set to the needed size.
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, pageCount is NULL, cause is invalid, or addresses is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Returns the list of retired pages by source, including pages that are pending retirement The address information provided from this API is the hardware address of the page that was retired. Note that this does not match the virtual address used in CUDA, but will match the address information in Xid 63

nvmlDeviceGetRetiredPages_v2 adds an additional timestamps parameter to return the time of each page's retirement. This is supported for Pascal and newer architecture.

For Kepler or newer fully supported devices.

`nvmlReturn_t nvmlDeviceGetRetiredPagesPendingStatus (nvmlDevice_t device, nvmlEnableState_t *isPending)`

Parameters

device

The identifier of the target device

isPending

Reference in which to return the pending status

Returns

- ▶ NVML_SUCCESS if isPending was populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or isPending is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Check if any pages are pending retirement and need a reboot to fully retire.

For Kepler or newer fully supported devices.

`nvmlReturn_t nvmlDeviceGetRemappedRows (nvmlDevice_t device, unsigned int *corrRows, unsigned int *uncRows, unsigned int *isPending, unsigned int *failureOccurred)`

Parameters

device

The identifier of the target device

corrRows

Reference for number of rows remapped due to correctable errors

uncRows

Reference for number of rows remapped due to uncorrectable errors

isPending

Reference for whether or not remappings are pending

failureOccurred

Reference that is set when a remapping has failed in the past

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_INVALID_ARGUMENT If corrRows, uncRows, isPending or failureOccurred is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED If MIG is enabled or if the device doesn't support this feature
- ▶ NVML_ERROR_UNKNOWN Unexpected error

Description

Get number of remapped rows. The number of rows reported will be based on the cause of the remapping. isPending indicates whether or not there are pending remappings. A reset will be required to actually remap the row. failureOccurred will be set if a row remapping ever failed in the past. A pending remapping won't affect future work on the GPU since error-containment and dynamic page blacklisting will take care of that.

On MIG-enabled GPUs with active instances, querying the number of remapped rows is not supported

For Ampere or newer fully supported devices.

nvmlReturn_t nvmlDevicegetRowRemapperHistogram (nvmlDevice_t device, nvmlRowRemapperHistogramValues_t *values)

Parameters**device**

Device handle

values

Histogram values

Returns

- ▶ NVML_SUCCESS On success
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Get the row remapper histogram. Returns the remap availability for each bank on the GPU.

nvmlReturn_t nvmlDeviceGetArchitecture (nvmlDevice_t device, nvmlDeviceArchitecture_t *arch)

Parameters**device**

The identifier of the target device

arch

Reference where architecture is returned, if call successful. Set to NVML_DEVICE_ARCH_* upon success

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device or arch (output reference) are invalid

Description

Get architecture for device

nvmlReturn_t nvmlDeviceGetClkMonStatus (nvmlDevice_t device, nvmlClkMonStatus_t *status)

Parameters**device**

The identifier of the target device

status

Reference in which to return the clkmon fault status

Returns

- ▶ NVML_SUCCESS if status has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or status is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature

- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the frequency monitor fault status for the device.

For Ampere or newer fully supported devices. Requires root user.

See [nvmlClkMonStatus_t](#) for details on decoding the status output.

See also:

[nvmlDeviceGetClkMonStatus\(\)](#)

**`nvmlReturn_t nvmlDeviceGetProcessUtilization
(nvmlDevice_t device, nvmlProcessUtilizationSample_t
*utilization, unsigned int *processSamplesCount,
unsigned long long lastSeenTimeStamp)`**

Parameters

device

The identifier of the target device

utilization

Pointer to caller-supplied buffer in which guest process utilization samples are returned

processSamplesCount

Pointer to caller-supplied array size, and returns number of processes running

lastSeenTimeStamp

Return only samples with timestamp greater than lastSeenTimeStamp.

Returns

- ▶ NVML_SUCCESS if utilization has been populated
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, utilization is NULL, or samplingPeriodUs is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_NOT_FOUND if sample entries are not found
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the current utilization and process ID

For Maxwell or newer fully supported devices.

Reads recent utilization of GPU SM (3D/Compute), framebuffer, video encoder, and video decoder for processes running. Utilization values are returned as an array of utilization sample structures in the caller-supplied buffer pointed at by utilization. One utilization sample structure is returned per process running, that had some non-zero utilization during the last sample period. It includes the CPU timestamp at which the samples were recorded. Individual utilization values are returned as "unsigned int" values. If no valid sample entries are found since the lastSeenTimeStamp, NVML_ERROR_NOT_FOUND is returned.

To read utilization values, first determine the size of buffer required to hold the samples by invoking the function with utilization set to NULL. The caller should allocate a buffer of size `processSamplesCount * sizeof(nvmlProcessUtilizationSample_t)`. Invoke the function again with the allocated buffer passed in utilization, and `processSamplesCount` set to the number of entries the buffer is sized for.

On successful return, the function updates `processSamplesCount` with the number of process utilization sample structures that were actually written. This may differ from a previously read value as instances are created or destroyed.

`lastSeenTimeStamp` represents the CPU timestamp in microseconds at which utilization samples were last read. Set it to 0 to read utilization based on all the samples maintained by the driver's internal sample buffer. Set `lastSeenTimeStamp` to a `timeStamp` retrieved from a previous query to read utilization since the previous query.

On MIG-enabled GPUs, querying process utilization is not currently supported.

`nvmlReturn_t nvmlDeviceGetProcessesUtilizationInfo (nvmlDevice_t device, nvmlProcessesUtilizationInfo_t *processesUtilInfo)`

Parameters

`device`

The identifier of the target device

`processesUtilInfo`

Pointer to the caller-provided structure of `nvmlProcessesUtilizationInfo_t`.

Returns

- ▶ NVML_SUCCESS If `procesesUtilInfo->procUtilArray` has been populated
- ▶ NVML_ERROR_UNINITIALIZED If the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device is invalid, or `procesesUtilInfo` is `NULL`
- ▶ NVML_ERROR_NOT_SUPPORTED If the device does not support this feature
- ▶ NVML_ERROR_NOT_FOUND If sample entries are not found
- ▶ NVML_ERROR_GPU_IS_LOST If the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the version of `procesesUtilInfo` is invalid
- ▶ NVML_ERROR_INSUFFICIENT_SIZE If `procesesUtilInfo->procUtilArray` is `NULL`, or the buffer size of `procesesUtilInfo->procUtilArray` is too small. The caller should check the minimal array size from the returned `procesesUtilInfo->processSamplesCount`, and call the function again with a buffer no smaller than `procesesUtilInfo->processSamplesCount * sizeof(nvmlProcessUtilizationInfo_t)`
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Retrieves the recent utilization and process ID for all running processes

For Maxwell or newer fully supported devices.

Reads recent utilization of GPU SM (3D/Compute), framebuffer, video encoder, and video decoder, jpeg decoder, OFA (Optical Flow Accelerator) for all running processes. Utilization values are returned as an array of utilization sample structures in the caller-supplied buffer pointed at by `procesesUtilInfo->procUtilArray`. One utilization sample structure is returned per process running, that had some non-zero utilization during the last sample period. It includes the CPU timestamp at which the samples were recorded. Individual utilization values are returned as "unsigned int" values.

The caller should allocate a buffer of size `processSamplesCount * sizeof(nvmlProcessUtilizationInfo_t)`. If the buffer is too small, the API will return `NVML_ERROR_INSUFFICIENT_SIZE`, with the recommended minimal buffer size at `procesesUtilInfo->processSamplesCount`. The caller should invoke the function again with the allocated buffer passed in `procesesUtilInfo->procUtilArray`, and `procesesUtilInfo->processSamplesCount` set to the number no less than the recommended value by the previous API return.

On successful return, the function updates `procesesUtilInfo->processSamplesCount` with the number of process utilization info structures that were actually written. This may differ from a previously read value as instances are created or destroyed.

`procesesUtilInfo->lastSeenTimeStamp` represents the CPU timestamp in microseconds at which utilization samples were last read. Set it to 0 to read utilization based on all

the samples maintained by the driver's internal sample buffer. Set `processesUtilInfo->lastSeenTimeStamp` to a `timeStamp` retrieved from a previous query to read utilization since the previous query.

`processesUtilInfo->version` is the version number of the structure `nvmlProcessesUtilizationInfo_t`, the caller should set the correct version number to retrieve the specific version of processes utilization information.

On MIG-enabled GPUs, querying process utilization is not currently supported.

`nvmlReturn_t nvmlDeviceGetPlatformInfo(nvmlDevice_t device, nvmlPlatformInfo_t *platformInfo)`

Parameters

`device`

The identifier of the target device

`platformInfo`

Pointer to the caller-provided structure of `nvmlPlatformInfo_t`.

Returns

- ▶ `NVML_SUCCESS` If `platformInfo` has been retrieved
- ▶ `NVML_ERROR_INVALID_ARGUMENT` If `device` is invalid or `platformInfo` is `NULL`
- ▶ `NVML_ERROR_NOT_SUPPORTED` If the device does not support this feature
- ▶ `NVML_ERROR_MEMORY` if system memory is insufficient
- ▶ `NVML_ERROR_ARGUMENT_VERSION_MISMATCH` If the version of `nvmlPlatformInfo_t` is invalid
- ▶ `NVML_ERROR_UNKNOWN` On any unexpected error

Description

Get platform information of this device.

For Blackwell or newer fully supported devices.

See `nvmlPlatformInfo_v2_t` for more information on the struct.

nvmlReturn_t nvmlDeviceGetPdi (nvmlDevice_t device, nvmlPdi_t *pdi)

Parameters

device

The identifier of the target device

pdi

Reference to the caller-provided structure to return the GPU PDI

Returns

- ▶ NVML_SUCCESS if pdi has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, or pdi is NULL
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH if the version is invalid/unsupported
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the Per Device Identifier (PDI) associated with this device.

For Pascal or newer fully supported devices.

See [nvmlPdi_v1_t](#) for more information on the struct.

nvmlReturn_t nvmlDeviceSetHostname_v1 (nvmlDevice_t device, nvmlHostname_v1_t *hostname)

Parameters

device

The identifier of the target device

hostname

Reference to the caller-provided nvmlHostname_v1_t struct containing the hostname

Returns

- ▶ NVML_SUCCESS if the hostname was set successfully
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized

- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or hostname is NULL or contains invalid characters
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to perform this operation
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Set the hostname for the device.

For Blackwell or newer fully supported devices. Requires root/admin permissions. Supported on Linux only.

Sets a hostname string for the GPU device. This operation takes effect immediately.

The hostname is not stored persistently across GPU resets or driver reloads.

See also:

[nvmlDeviceGetHostname_v1\(\)](#)

**nvmlReturn_t nvmlDeviceGetHostname_v1
(nvmlDevice_t device, nvmlHostname_v1_t *hostname)**

Parameters

device

The identifier of the target device

hostname

Reference to the caller-provided nvmlHostname_v1_t struct to return the hostname

Returns

- ▶ NVML_SUCCESS if the hostname was retrieved successfully
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or hostname is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Get the hostname for the device.

For Blackwell or newer fully supported devices. Supported on Linux only.

Retrieves the hostname string for the GPU device that was set using [nvmlDeviceSetHostname_v1\(\)](#).

See also:

[nvmlDeviceSetHostname_v1\(\)](#)

5.16.1. CPU and Memory Affinity

Device Queries

This chapter describes NVML operations that are associated with CPU and memory affinity.

`nvmlReturn_t nvmlDeviceGetMemoryAffinity (nvmlDevice_t device, unsigned int nodeSetSize, unsignedlong *nodeSet, nvmlAffinityScope_t scope)`

Parameters

device

The identifier of the target device

nodeSetSize

The size of the nodeSet array that is safe to access

nodeSet

Array reference in which to return a bitmask of NODEs, 64 NODEs per unsigned long on 64-bit machines, 32 on 32-bit machines

scope

Scope that change the default behavior

Returns

- ▶ NVML_SUCCESS if NUMA node Affinity has been filled
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, nodeSetSize == 0, nodeSet is NULL or scope is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves an array of unsigned ints (sized to nodeSetSize) of bitmasks with the ideal memory affinity within node or socket for the device. For example, if NUMA node 0, 1 are ideal within the socket for the device and nodeSetSize == 1, result[0] = 0x3

If requested scope is not applicable to the target topology, the API will fall back to reporting the memory affinity for the immediate non-I/O ancestor of the device.

For Kepler or newer fully supported devices. Supported on Linux only.

nvmlReturn_t nvmlDeviceGetCpuAffinityWithinScope (nvmlDevice_t device, unsigned int cpuSetSize, unsignedlong *cpuSet, nvmlAffinityScope_t scope)

Parameters

device

The identifier of the target device

cpuSetSize

The size of the cpuSet array that is safe to access

cpuSet

Array reference in which to return a bitmask of CPUs, 64 CPUs per unsigned long on 64-bit machines, 32 on 32-bit machines

scope

Scope that change the default behavior

Returns

- ▶ NVML_SUCCESS if cpuAffinity has been filled
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, cpuSetSize == 0, cpuSet is NULL or scope is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves an array of unsigned ints (sized to cpuSetSize) of bitmasks with the ideal CPU affinity within node or socket for the device. For example, if processors 0, 1, 32, and 33 are ideal for the device and cpuSetSize == 2, result[0] = 0x3, result[1] = 0x3

If requested scope is not applicable to the target topology, the API will fall back to reporting the CPU affinity for the immediate non-I/O ancestor of the device.

For Kepler or newer fully supported devices. Supported on Linux only.

`nvmlReturn_t nvmlDeviceGetCpuAffinity (nvmlDevice_t device, unsigned int cpuSetSize, unsignedlong *cpuSet)`

Parameters

device

The identifier of the target device

cpuSetSize

The size of the cpuSet array that is safe to access

cpuSet

Array reference in which to return a bitmask of CPUs, 64 CPUs per unsigned long on 64-bit machines, 32 on 32-bit machines

Returns

- ▶ NVML_SUCCESS if cpuAffinity has been filled
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, cpuSetSize == 0, or cpuSet is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves an array of unsigned ints (sized to cpuSetSize) of bitmasks with the ideal CPU affinity for the device. For example, if processors 0, 1, 32, and 33 are ideal for the device and cpuSetSize == 2, result[0] = 0x3, result[1] = 0x3. This is equivalent to calling `nvmlDeviceGetCpuAffinityWithinScope` with `NVML_AFFINITY_SCOPE_NODE`.

For Kepler or newer fully supported devices. Supported on Linux only.

`nvmlReturn_t nvmlDeviceSetCpuAffinity (nvmlDevice_t device)`

Parameters

device

The identifier of the target device

Returns

- ▶ NVML_SUCCESS if the calling process has been successfully bound
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Sets the ideal affinity for the calling thread and device using the guidelines given in [nvmlDeviceGetCpuAffinity\(\)](#). Note, this is a change as of version 8.0. Older versions set the affinity for a calling process and all children. Currently supports up to 1024 processors.

For Kepler or newer fully supported devices. Supported on Linux only.

`nvmlReturn_t nvmlDeviceClearCpuAffinity (nvmlDevice_t device)`**Parameters****device**

The identifier of the target device

Returns

- ▶ NVML_SUCCESS if the calling process has been successfully unbound
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Clear all affinity bindings for the calling thread. Note, this is a change as of version 8.0 as older versions cleared the affinity for a calling process and all children.

For Kepler or newer fully supported devices. Supported on Linux only.

nvmlReturn_t nvmlDeviceGetNumaNodeId (nvmlDevice_t device, unsigned int *node)

Parameters

device

The device handle

node

NUMA node ID of the device

Returns

- ▶ NVML_SUCCESS if the NUMA node is retrieved successfully
- ▶ NVML_ERROR_NOT_SUPPORTED if request is not supported on the current platform
- ▶ NVML_ERROR_INVALID_ARGUMENT if device node is invalid

Description

Get the NUMA node of the given GPU device. This only applies to platforms where the GPUs are NUMA nodes.

nvmlReturn_t nvmlDeviceGetAddressingMode (nvmlDevice_t device, nvmlDeviceAddressingMode_t *mode)

Parameters

device

The device handle

mode

Pointer to addressing mode of the device

Returns

- ▶ NVML_SUCCESS if mode is retrieved successfully
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH if the provided version is invalid/unsupported
- ▶ NVML_ERROR_NOT_SUPPORTED if request is not supported on the current platform
- ▶ NVML_ERROR_INVALID_ARGUMENT if device node is invalid

Description

Get the addressing mode for a given GPU. Addressing modes can be one of: 1. HMM: System allocated memory (malloc, mmap) is addressable from the device (GPU), via software-based mirroring of the CPU's page tables, on the GPU. 2. ATS: System allocated memory (malloc, mmap) is addressable from the device (GPU), via Address Translation Services. This means that there is (effectively) a single set of page tables, and the CPU and GPU both use them. 3. None: Neither HMM nor ATS is active.

For Turing or newer fully supported devices. Supported on Linux only.

nvmlReturn_t nvmlDeviceGetRepairStatus (nvmlDevice_t device, nvmlRepairStatus_t *repairStatus)

Parameters

device

The identifier of the target device

repairStatus

Reference to nvmlRepairStatus_t

Returns

- ▶ NVML_SUCCESS if the query was successful
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH if the provided version is invalid/unsupported
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Get the repair status for TPC/Channel repair

For Ampere or newer fully supported devices.

#define NVML_AFFINITY_SCOPE_NODE 0

Scope of NUMA node for affinity queries.

#define NVML_AFFINITY_SCOPE_SOCKET 1

Scope of processor socket for affinity queries.

5.17. Unit Commands

This chapter describes NVML operations that change the state of the unit. For S-class products. Each of these requires root/admin access. Non-admin users will see an NVML_ERROR_NO_PERMISSION error code when invoking any of these methods.

`nvmlReturn_t nvmlUnitSetLedState (nvmlUnit_t unit, nvmlLedColor_t color)`

Parameters

`unit`

The identifier of the target unit

`color`

The target LED color

Returns

- ▶ NVML_SUCCESS if the LED color has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if unit or color is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if this is not an S-class product
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to perform this operation
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Set the LED state for the unit. The LED can be either green (0) or amber (1).

For S-class products. Requires root/admin permissions.

This operation takes effect immediately.

Current S-Class products don't provide unique LEDs for each unit. As such, both front and back LEDs will be toggled in unison regardless of which unit is specified with this command.

See `nvmlLedColor_t` for available colors.

See also:

`nvmlUnitGetLedState()`

5.18. Device Commands

This chapter describes NVML operations that change the state of the device. Each of these requires root/admin access. Non-admin users will see an NVML_ERROR_NO_PERMISSION error code when invoking any of these methods.

nvmlReturn_t nvmlDeviceSetPersistenceMode (nvmlDevice_t device, nvmlEnableState_t mode)

Parameters

device

The identifier of the target device

mode

The target persistence mode

Returns

- ▶ NVML_SUCCESS if the persistence mode was set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or mode is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to perform this operation
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Set the persistence mode for the device.

For all products. For Linux only. Requires root/admin permissions.

The persistence mode determines whether the GPU driver software is torn down after the last client exits.

This operation takes effect immediately. It is not persistent across reboots. After each reboot the persistence mode is reset to "Disabled".

See [nvmlEnableState_t](#) for available modes.

After calling this API with mode set to NVML_FEATURE_DISABLED on a device that has its own NUMA memory, the given device handle will no longer be valid, and to continue to interact with this device, a new handle should be obtained from one of the

`nvmlDeviceGetHandleBy*`() APIs. This limitation is currently only applicable to devices that have a coherent NVLink connection to system memory.

See also:

[nvmlDeviceGetPersistenceMode\(\)](#)

nvmlReturn_t nvmlDeviceSetComputeMode (nvmlDevice_t device, nvmlComputeMode_t mode)

Parameters

device

The identifier of the target device

mode

The target compute mode

Returns

- ▶ NVML_SUCCESS if the compute mode was set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or mode is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to perform this operation
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Set the compute mode for the device.

For all products. Requires root/admin permissions.

The compute mode determines whether a GPU can be used for compute operations and whether it can be shared across contexts.

This operation takes effect immediately. Under Linux it is not persistent across reboots and always resets to "Default". Under windows it is persistent.

Under windows compute mode may only be set to DEFAULT when running in WDDM

On MIG-enabled GPUs, compute mode would be set to DEFAULT and changing it is not supported.

See [nvmlComputeMode_t](#) for details on available compute modes.

See also:

[nvmlDeviceGetComputeMode\(\)](#)

nvmlReturn_t nvmlDeviceSetEccMode (nvmlDevice_t device, nvmlEnableState_t ecc)

Parameters

device

The identifier of the target device

ecc

The target ECC mode

Returns

- ▶ NVML_SUCCESS if the ECC mode was set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or ecc is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to perform this operation
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Set the ECC mode for the device.

For Kepler or newer fully supported devices. Only applicable to devices with ECC. Requires NVML_INFOROM_ECC version 1.0 or higher. Requires root/admin permissions.

The ECC mode determines whether the GPU enables its ECC support.

This operation takes effect after the next reboot.

See [nvmlEnableState_t](#) for details on available modes.

See also:

[nvmlDeviceGetEccMode\(\)](#)

`nvmlReturn_t nvmlDeviceClearEccErrorCounts (nvmlDevice_t device, nvmlEccCounterType_t counterType)`

Parameters

device

The identifier of the target device

counterType

Flag that indicates which type of errors should be cleared.

Returns

- ▶ NVML_SUCCESS if the error counts were cleared
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or counterType is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to perform this operation
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Clear the ECC error and other memory error counts for the device.

For Kepler or newer fully supported devices. Only applicable to devices with ECC. Requires NVML_INFOROM_ECC version 2.0 or higher to clear aggregate location-based ECC counts. Requires NVML_INFOROM_ECC version 1.0 or higher to clear all other ECC counts. Requires root/admin permissions. Requires ECC Mode to be enabled.

Sets all of the specified ECC counters to 0, including both detailed and total counts.

This operation takes effect immediately.

See `nvmlMemoryErrorType_t` for details on available counter types.

See also:

- ▶ `nvmlDeviceGetDetailedEccErrors()`
- ▶ `nvmlDeviceGetTotalEccErrors()`

nvmlReturn_t nvmlDeviceSetDriverModel (nvmlDevice_t device, nvmlDriverModel_t driverModel, unsigned int flags)

Parameters

device

The identifier of the target device

driverModel

The target driver model

flags

Flags that change the default behavior

Returns

- ▶ NVML_SUCCESS if the driver model has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or driverModel is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the platform is not windows or the device does not support this feature
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to perform this operation
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Set the driver model for the device.

For Fermi or newer fully supported devices. For windows only. Requires root/admin permissions.

On Windows platforms the device driver can run in either WDDM or WDM (TCC) mode. If a display is attached to the device it must run in WDDM mode.

It is possible to force the change to WDM (TCC) while the display is still attached with a force flag (nvmlFlagForce). This should only be done if the host is subsequently powered down and the display is detached from the device before the next reboot.

This operation takes effect after the next reboot.

Windows driver model may only be set to WDDM when running in DEFAULT compute mode.

Change driver model to WDDM is not supported when GPU doesn't support graphics acceleration or will not support it after reboot. See [nvmlDeviceSetGpuOperationMode](#).

See [nvmlDriverModel_t](#) for details on available driver models. See [nvmlFlagDefault](#) and [nvmlFlagForce](#)

See also:

[nvmlDeviceGetDriverModel\(\)](#)

nvmlReturn_t nvmlDeviceSetGpuLockedClocks (nvmlDevice_t device, unsigned int minGpuClockMHz, unsigned int maxGpuClockMHz)

Parameters

device

The identifier of the target device

minGpuClockMHz

Requested minimum gpu clock in MHz

maxGpuClockMHz

Requested maximum gpu clock in MHz

Returns

- ▶ NVML_SUCCESS if new settings were successfully set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or minGpuClockMHz and maxGpuClockMHz is not a valid clock combination
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to perform this operation
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Set clocks that device will lock to.

Sets the clocks that the device will be running at to the value in the range of minGpuClockMHz to maxGpuClockMHz.

Can be used as a setting to request constant performance.

This can be called with a pair of integer clock frequencies in MHz, or a pair of /ref `nvmlClockLimitId_t` values. See the table below for valid combinations of these values.

<code>minGpuClock</code>	<code> maxGpuClock</code>	<code> Effect -----+-----</code>	
<code>+-----</code>		<code>tdp tdp Lock clock to TDP unlimited </code>	
<code>tdp </code>	<code>Upper bound is TDP but clock may drift below this</code>	<code>tdp unlimited Lower</code>	
<code>Lower bound is TDP but clock may boost above this</code>	<code>unlimited unlimited Unlocked (==</code>	<code>nvmlDeviceResetGpuLockedClocks)</code>	

If one arg takes one of these values, the other must be one of these values as well. Mixed numeric and symbolic calls return NVML_ERROR_INVALID_ARGUMENT.

Requires root/admin permissions.

After system reboot or driver reload GPU clocks go back to their default value. See `nvmlDeviceResetGpuLockedClocks`.

For Volta or newer fully supported devices.

`nvmlReturn_t nvmlDeviceResetGpuLockedClocks (nvmlDevice_t device)`

Parameters

`device`

The identifier of the target device

Returns

- ▶ NVML_SUCCESS if new settings were successfully set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Resets the gpu clock to the default value

This is the gpu clock that will be used after system reboot or driver reload. Default values are idle clocks.

See also:

`nvmlDeviceSetGpuLockedClocks`

For Volta or newer fully supported devices.

nvmlReturn_t nvmlDeviceSetMemoryLockedClocks (nvmlDevice_t device, unsigned int minMemClockMHz, unsigned int maxMemClockMHz)

Parameters

device

The identifier of the target device

minMemClockMHz

Requested minimum memory clock in MHz

maxMemClockMHz

Requested maximum memory clock in MHz

Returns

- ▶ NVML_SUCCESS if new settings were successfully set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or minGpuClockMHz and maxGpuClockMHz is not a valid clock combination
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to perform this operation
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Set memory clocks that device will lock to.

Sets the device's memory clocks to the value in the range of minMemClockMHz to maxMemClockMHz.

Can be used as a setting to request constant performance.

Requires root/admin permissions.

After system reboot or driver reload memory clocks go back to their default value. See [nvmlDeviceResetMemoryLockedClocks](#).

For Ampere or newer fully supported devices.

nvmlReturn_t nvmlDeviceResetMemoryLockedClocks (nvmlDevice_t device)

Parameters

device

The identifier of the target device

Returns

- ▶ NVML_SUCCESS if new settings were successfully set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Resets the memory clock to the default value

This is the memory clock that will be used after system reboot or driver reload. Default values are idle clocks.

See also:

[nvmlDeviceSetMemoryLockedClocks](#)

For Ampere or newer fully supported devices.

nvmlReturn_t nvmlDeviceSetApplicationsClocks (nvmlDevice_t device, unsigned int memClockMHz, unsigned int graphicsClockMHz)

Description

Deprecated Applications clocks are deprecated and will be removed in CUDA 14.0.

Please use [nvmlDeviceSetMemoryLockedClocks](#) for Memory Clocks and [nvmlDeviceSetGpuLockedClocks](#) for Graphics Clocks.

nvmlReturn_t nvmlDeviceResetApplicationsClocks (nvmlDevice_t device)

Description

Deprecated Applications clocks are deprecated and will be removed in CUDA 14.0.

Please use [nvmlDeviceResetMemoryLockedClocks](#) for Memory Clocks and [nvmlDeviceResetGpuLockedClocks](#) for Graphics Clocks.

nvmlReturn_t nvmlDeviceSetAutoBoostedClocksEnabled (nvmlDevice_t device, nvmlEnableState_t enabled)

Parameters

device

The identifier of the target device

enabled

What state to try to set Auto Boosted clocks of the target device to

Returns

- ▶ NVML_SUCCESS If the Auto Boosted clocks were successfully set to the state specified by enabled
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support Auto Boosted clocks
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Try to set the current state of Auto Boosted clocks on a device.

For Kepler or newer fully supported devices.

Auto Boosted clocks are enabled by default on some hardware, allowing the GPU to run at higher clock rates to maximize performance as thermal limits allow. Auto Boosted clocks should be disabled if fixed clock rates are desired.

Non-root users may use this API by default but can be restricted by root from using this API by calling [nvmlDeviceSetAPIRestriction](#) with apiType=NVML_RESTRICTED_API_SET_AUTO_BOOSTED_CLOCKS. Note:

Persistence Mode is required to modify current Auto Boost settings, therefore, it must be enabled.

On Pascal and newer hardware, Auto Boosted clocks are controlled through application clocks. Use `nvmlDeviceSetApplicationsClocks` and `nvmlDeviceResetApplicationsClocks` to control Auto Boost behavior.

`nvmlReturn_t`

`nvmlDeviceSetDefaultAutoBoostedClocksEnabled` (`nvmlDevice_t device`, `nvmlEnableState_t enabled`, `unsigned int flags`)

Parameters

`device`

The identifier of the target device

`enabled`

What state to try to set default Auto Boosted clocks of the target device to

`flags`

Flags that change the default behavior. Currently Unused.

Returns

- ▶ NVML_SUCCESS If the Auto Boosted clock's default state was successfully set to the state specified by enabled
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_NO_PERMISSION If the calling user does not have permission to change Auto Boosted clock's default state.
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support Auto Boosted clocks
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Try to set the default state of Auto Boosted clocks on a device. This is the default state that Auto Boosted clocks will return to when no compute running processes (e.g. CUDA application which have an active context) are running

For Kepler or newer non-GeForce fully supported devices and Maxwell or newer GeForce devices. Requires root/admin permissions.

Auto Boosted clocks are enabled by default on some hardware, allowing the GPU to run at higher clock rates to maximize performance as thermal limits allow. Auto Boosted clocks should be disabled if fixed clock rates are desired.

On Pascal and newer hardware, Auto Boosted clocks are controlled through application clocks. Use `nvmlDeviceSetApplicationsClocks` and `nvmlDeviceResetApplicationsClocks` to control Auto Boost behavior.

`nvmlReturn_t nvmlDeviceSetDefaultFanSpeed_v2` **`(nvmlDevice_t device, unsigned int fan)`**

Parameters

device

The identifier of the target device

fan

The index of the fan, starting at zero

Description

Sets the speed of the fan control policy to default.

For all cuda-capable discrete products with fans

return NVML_SUCCESS if speed has been adjusted

NVML_ERROR_UNINITIALIZED if the library has not been successfully

initialized NVML_ERROR_INVALID_ARGUMENT if device is invalid

NVML_ERROR_NOT_SUPPORTED if the device does not support this (doesn't have

fans) NVML_ERROR_UNKNOWN on any unexpected error

`nvmlReturn_t nvmlDeviceSetFanControlPolicy` **`(nvmlDevice_t device, unsigned int fan,`** **`nvmlFanControlPolicy_t policy)`**

Description

Sets current fan control policy.

For Maxwell or newer fully supported devices.

Requires privileged user.

For all cuda-capable discrete products with fans

device The identifier of the target device policy The fan control policy to set

return NVML_SUCCESS if policy has been set NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized NVML_ERROR_INVALID_ARGUMENT if device is invalid or policy is null or the fan given doesn't reference a fan that exists. NVML_ERROR_NOT_SUPPORTED if the device is older than Maxwell NVML_ERROR_UNKNOWN on any unexpected error

nvmlReturn_t nvmlDeviceSetTemperatureThreshold (nvmlDevice_t device, nvmlTemperatureThresholds_t thresholdType, int *temp)

Parameters

device

The identifier of the target device

thresholdType

The type of threshold value to be set

temp

Reference which hold the value to be set

Returns

- ▶ NVML_SUCCESS if temp has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, thresholdType is invalid or temp is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not have a temperature sensor or is unsupported
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Sets the temperature threshold for the GPU with the specified threshold type in degrees C.

For Maxwell or newer fully supported devices.

See [nvmlTemperatureThresholds_t](#) for details on available temperature thresholds.

nvmlReturn_t nvmlDeviceSetPowerManagementLimit (nvmlDevice_t device, unsigned int limit)

Parameters

device

The identifier of the target device

limit

Power management limit in milliwatts to set

Returns

- ▶ NVML_SUCCESS if limit has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or defaultLimit is out of range
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Set new power limit of this device.

For Kepler or newer fully supported devices. Requires root/admin permissions.

See [nvmlDeviceGetPowerManagementLimitConstraints](#) to check the allowed ranges of values.

Limit is not persistent across reboots or driver unloads. Enable persistent mode to prevent driver from unloading when no application is using the device.

See also:

[nvmlDeviceGetPowerManagementLimitConstraints](#)

[nvmlDeviceGetPowerManagementDefaultLimit](#)

`nvmlReturn_t nvmlDeviceSetGpuOperationMode (nvmlDevice_t device, nvmlGpuOperationMode_t mode)`

Parameters

device

The identifier of the target device

mode

Target GOM

Returns

- ▶ NVML_SUCCESS if mode has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or mode incorrect
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support GOM or specific mode
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to perform this operation
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Sets new GOM. See `nvmlGpuOperationMode_t` for details.

For GK110 M-class and X-class Tesla products from the Kepler family. Modes

`NVML_GOM_LOW_DP` and `NVML_GOM_ALL_ON` are supported on fully supported GeForce products. Not supported on Quadro and Tesla C-class products. Requires root/admin permissions.

Changing GOMs requires a reboot. The reboot requirement might be removed in the future.

Compute only GOMs don't support graphics acceleration. Under windows switching to these GOMs when pending driver model is WDDM is not supported. See `nvmlDeviceSetDriverModel`.

See also:

`nvmlGpuOperationMode_t`

`nvmlDeviceGetGpuOperationMode`

nvmlReturn_t nvmlDeviceSetAPIRestriction (nvmlDevice_t device, nvmlRestrictedAPI_t apiType, nvmlEnableState_t isRestricted)

Parameters

device

The identifier of the target device

apiType

Target API type for this operation

isRestricted

The target restriction

Returns

- ▶ NVML_SUCCESS if isRestricted has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or apiType incorrect
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support changing API restrictions or the device does not support the feature that api restrictions are being set for (E.G. Enabling/disabling auto boosted clocks is not supported by the device)
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to perform this operation
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Changes the root/admin restrictions on certain APIs. See nvmlRestrictedAPI_t for the list of supported APIs. This method can be used by a root/admin user to give non-root/admin access to certain otherwise-restricted APIs. The new setting lasts for the lifetime of the NVIDIA driver; it is not persistent. See nvmlDeviceGetAPIRestriction to query the current restriction settings.

For Kepler or newer fully supported devices. Requires root/admin permissions.

See also:

[nvmlRestrictedAPI_t](#)

nvmlReturn_t nvmlDeviceSetFanSpeed_v2 (nvmlDevice_t device, unsigned int fan, unsigned int speed)

Description

Sets the speed of a specified fan.

WARNING: This function changes the fan control policy to manual. It means that YOU have to monitor the temperature and adjust the fan speed accordingly. If you set the fan speed too low you can burn your GPU! Use nvmlDeviceSetDefaultFanSpeed_v2 to restore default control policy.

For all cuda-capable discrete products with fans that are Maxwell or Newer.

device The identifier of the target device
fan The index of the fan, starting at zero
speed The target speed of the fan [0-100] in % of max speed

return NVML_SUCCESS if the fan speed has been set
 NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
 NVML_ERROR_INVALID_ARGUMENT if the device is not valid, or the speed is outside acceptable ranges, or if the fan index doesn't reference an actual fan.
 NVML_ERROR_NOT_SUPPORTED if the device is older than Maxwell.
 NVML_ERROR_UNKNOWN if there was an unexpected error.

nvmlReturn_t nvmlDeviceSetGpcClkVfOffset (nvmlDevice_t device, int offset)

Parameters

device

The identifier of the target device

offset

The GPCCLK VF offset value to set

Returns

- ▶ NVML_SUCCESS if offset has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or offset is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Deprecated Will be deprecated in a future release. Use [nvmlDeviceSetClockOffsets](#) instead. It works on Maxwell onwards GPU architectures.

Set the GPCCLK VF offset value

nvmlReturn_t nvmlDeviceSetMemClkVfOffset (nvmlDevice_t device, int offset)

Parameters

device

The identifier of the target device

offset

The MemClk VF offset value to set

Returns

- ▶ NVML_SUCCESS if offset has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or offset is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Deprecated Will be deprecated in a future release. Use [nvmlDeviceSetClockOffsets](#) instead. It works on Maxwell onwards GPU architectures.

Set the MemClk (Memory Clock) VF offset value. It requires elevated privileges.

5.19. NvLink Methods

This chapter describes methods that NVML can perform on NVLINK enabled devices.

```
struct nvmlNvLinkInfo_v1_t  
struct nvmlNvlinkFirmwareVersion_t  
struct nvmlNvlinkFirmwareInfo_t  
struct nvmlNvLinkInfo_v2_t  
nvmlReturn_t nvmlDeviceGetNvLinkState (nvmlDevice_t  
device, unsigned int link, nvmlEnableState_t *isActive)
```

Parameters

device

The identifier of the target device

link

Specifies the NvLink link to be queried

isActive

nvmlEnableState_t where NVML_FEATURE_ENABLED indicates that the link is active and NVML_FEATURE_DISABLED indicates it is inactive

Returns

- ▶ NVML_SUCCESS if isActive has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device or link is invalid or isActive is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the state of the device's NvLink for the link specified

For Pascal or newer fully supported devices.

`nvmlReturn_t nvmlDeviceGetNvLinkVersion (nvmlDevice_t device, unsigned int link, unsigned int *version)`

Parameters

device

The identifier of the target device

link

Specifies the NvLink link to be queried

version

Requested NvLink version from `nvmlNvlinkVersion_t`

Returns

- ▶ `NVML_SUCCESS` if version has been set
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device or link is invalid or version is `NULL`
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device doesn't support this feature
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieves the version of the device's NvLink for the link specified

For Pascal or newer fully supported devices.

`nvmlReturn_t nvmlDeviceGetNvLinkCapability (nvmlDevice_t device, unsigned int link, nvmlNvLinkCapability_t capability, unsigned int *capResult)`

Parameters

device

The identifier of the target device

link

Specifies the NvLink link to be queried

capability

Specifies the `nvmlNvLinkCapability_t` to be queried

capResult

A boolean for the queried capability indicating that feature is available

Returns

- ▶ NVML_SUCCESS if capResult has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device, link, or capability is invalid or capResult is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the requested capability from the device's NvLink for the link specified. Please refer to the `nvmlNvLinkCapability_t` structure for the specific caps that can be queried. The return value should be treated as a boolean.

For Pascal or newer fully supported devices.

`nvmlReturn_t nvmlDeviceGetNvLinkRemotePciInfo_v2 (nvmlDevice_t device, unsigned int link, nvmlPciInfo_t *pci)`

Parameters**device**

The identifier of the target device

link

Specifies the NvLink link to be queried

pci

`nvmlPciInfo_t` of the remote node for the specified link

Returns

- ▶ NVML_SUCCESS if pci has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device or link is invalid or pci is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the PCI information for the remote node on a NvLink link Note:
pciSubSystemId is not filled in this function and is indeterminate

For Pascal or newer fully supported devices.

```
nvmlReturn_t nvmlDeviceGetNvLinkErrorCounter
(nvmlDevice_t device, unsigned int link,
nvmlNvLinkErrorCounter_t counter, unsigned long long
*counterValue)
```

Parameters

device

The identifier of the target device

link

Specifies the NvLink link to be queried

counter

Specifies the NvLink counter to be queried

counterValue

Returned counter value

Returns

- ▶ NVML_SUCCESS if counter has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device, link, or counter is invalid or counterValue is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the specified error counter value Please refer to nvmlNvLinkErrorCounter_t for error counters that are available

For Pascal or newer fully supported devices.

nvmlReturn_t nvmlDeviceResetNvLinkErrorCounters (nvmlDevice_t device, unsigned int link)

Parameters

device

The identifier of the target device

link

Specifies the NvLink link to be queried

Returns

- ▶ NVML_SUCCESS if the reset is successful
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device or link is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Resets all error counters to zero Please refer to `nvmlNvLinkErrorCounter_t` for the list of error counters that are reset

For Pascal or newer fully supported devices.

nvmlReturn_t nvmlDeviceSetNvLinkUtilizationControl (nvmlDevice_t device, unsigned int link, unsigned int counter, nvmlNvLinkUtilizationControl_t *control, unsigned int reset)

Parameters

device

The identifier of the target device

link

Specifies the NvLink link to be queried

counter

Specifies the counter that should be set (0 or 1).

control

A reference to the `nvmlNvLinkUtilizationControl_t` to set

reset

Resets the counters on set if non-zero

Returns

- ▶ NVML_SUCCESS if the control has been set successfully
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device, counter, link, or control is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Deprecated Setting utilization counter control is no longer supported.

Set the NVLINK utilization counter control information for the specified counter, 0 or 1. Please refer to [nvmlNvLinkUtilizationControl_t](#) for the structure definition. Performs a reset of the counters if the reset parameter is non-zero.

For Pascal or newer fully supported devices.

**nvmlReturn_t nvmlDeviceGetNvLinkUtilizationControl
(nvmlDevice_t device, unsigned int link, unsigned int
counter, nvmlNvLinkUtilizationControl_t *control)**

Parameters**device**

The identifier of the target device

link

Specifies the NvLink link to be queried

counter

Specifies the counter that should be set (0 or 1).

control

A reference to the [nvmlNvLinkUtilizationControl_t](#) to place information

Returns

- ▶ NVML_SUCCESS if the control has been set successfully
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device, counter, link, or control is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Deprecated Getting utilization counter control is no longer supported.

Get the NVLINK utilization counter control information for the specified counter, 0 or 1. Please refer to [nvmlNvLinkUtilizationControl_t](#) for the structure definition

For Pascal or newer fully supported devices.

```
nvmlReturn_t nvmlDeviceGetNvLinkUtilizationCounter
(nvmlDevice_t device, unsigned int link, unsigned int counter, unsigned long long *rxcnter, unsigned long long *txcounter)
```

Parameters

device

The identifier of the target device

link

Specifies the NvLink link to be queried

counter

Specifies the counter that should be read (0 or 1).

rxcnter

Receive counter return value

txcounter

Transmit counter return value

Returns

- ▶ NVML_SUCCESS if rxcnter and txcounter have been successfully set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device, counter, or link is invalid or rxcnter or txcounter are NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Deprecated Use [nvmlDeviceGetFieldValues](#) with NVML_FI_DEV_NVLINK_THROUGHPUT_* as field values instead.

Retrieve the NVLINK utilization counter based on the current control for a specified counter. In general it is good practice to use [nvmlDeviceSetNvLinkUtilizationControl](#) before reading the utilization counters as they have no default state

For Pascal or newer fully supported devices.

nvmlReturn_t

nvmlDeviceFreezeNvLinkUtilizationCounter

(nvmlDevice_t device, unsigned int link, unsigned int counter, nvmlEnableState_t freeze)

Parameters

device

The identifier of the target device

link

Specifies the NvLink link to be queried

counter

Specifies the counter that should be frozen (0 or 1).

freeze

NVML_FEATURE_ENABLED = freeze the receive and transmit counters

NVML_FEATURE_DISABLED = unfreeze the receive and transmit counters

Returns

- ▶ NVML_SUCCESS if counters were successfully frozen or unfrozen
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device, link, counter, or freeze is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Deprecated Freezing NVLINK utilization counters is no longer supported.

Freeze the NVLINK utilization counters Both the receive and transmit counters are operated on by this function

For Pascal or newer fully supported devices.

`nvmlReturn_t nvmlDeviceResetNvLinkUtilizationCounter (nvmlDevice_t device, unsigned int link, unsigned int counter)`

Parameters

device

The identifier of the target device

link

Specifies the NvLink link to be reset

counter

Specifies the counter that should be reset (0 or 1)

Returns

- ▶ NVML_SUCCESS if counters were successfully reset
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device, link, or counter is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Deprecated Resetting NVLINK utilization counters is no longer supported.

Reset the NVLINK utilization counters Both the receive and transmit counters are operated on by this function

For Pascal or newer fully supported devices.

`nvmlReturn_t nvmlDeviceGetNvLinkRemoteDeviceType (nvmlDevice_t device, unsigned int link, nvmlIntNvLinkDeviceType_t *pNvLinkDeviceType)`

Parameters

device

The device handle of the target GPU

link

The NVLink link index on the target GPU

pNvLinkDeviceType

Pointer in which the output remote device type is returned

Returns

- ▶ NVML_SUCCESS if pNvLinkDeviceType has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_NOT_SUPPORTED if NVLink is not supported
- ▶ NVML_ERROR_INVALID_ARGUMENT if device or link is invalid, or pNvLinkDeviceType is NULL
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Get the NVLink device type of the remote device connected over the given link.

`nvmlReturn_t`**`nvmlDeviceSetNvLinkDeviceLowPowerThreshold`**

(`nvmlDevice_t device, nvmlNvLinkPowerThres_t *info`)

Parameters**`device`**

The identifier of the target device

`info`

Reference to `nvmlNvLinkPowerThres_t` struct input parameters

Returns

- ▶ NVML_SUCCESS if the Threshold is successfully set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or Threshold is not within range
- ▶ NVML_ERROR_NOT_READY if an internal driver setting prevents the threshold from being used
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device

Description

Set NVLink Low Power Threshold for device.

For Hopper or newer fully supported devices.

nvmlReturn_t nvmlSystemSetNvlinkBwMode (unsigned int nvlinkBwMode)

Parameters

nvlinkBwMode

nvlink bandwidth mode

Returns

- ▶ NVML_SUCCESS on success
- ▶ NVML_ERROR_INVALID_ARGUMENT if an invalid argument is provided
- ▶ NVML_ERROR_IN_USE if P2P object exists
- ▶ NVML_ERROR_NOT_SUPPORTED if GPU is not Hopper or newer architecture.
- ▶ NVML_ERROR_NO_PERMISSION if not root user

Description

Set the global nvlink bandwith mode

nvmlReturn_t nvmlSystemGetNvlinkBwMode (unsigned int *nvlinkBwMode)

Parameters

nvlinkBwMode

reference of nvlink bandwidth mode

Returns

- ▶ NVML_SUCCESS on success
- ▶ NVML_ERROR_INVALID_ARGUMENT if an invalid pointer is provided
- ▶ NVML_ERROR_NOT_SUPPORTED if GPU is not Hopper or newer architecture.
- ▶ NVML_ERROR_NO_PERMISSION if not root user

Description

Get the global nvlink bandwith mode

nvmlReturn_t nvmlDeviceGetNvlinkSupportedBwModes (nvmlDevice_t device, nvmlNvlinkSupportedBwModes_t *supportedBwMode)

Parameters

device

The identifier of the target device

supportedBwMode

Reference to nvmlNvlinkSupportedBwModes_t

Returns

- ▶ NVML_SUCCESS if the query was successful
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or supportedBwMode is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this feature is not supported by the device
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH if the version specified is not supported

Description

Get the supported NvLink Reduced Bandwidth Modes of the device

For Blackwell or newer fully supported devices.

nvmlReturn_t nvmlDeviceGetNvlinkBwMode (nvmlDevice_t device, nvmlNvlinkGetBwMode_t *getBwMode)

Parameters

device

The identifier of the target device

getBwMode

Reference to nvmlNvlinkGetBwMode_t

Returns

- ▶ NVML_SUCCESS if the query was successful
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or getBwMode is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this feature is not supported by the device

- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH if the version specified is not supported

Description

Get the NvLink Reduced Bandwidth Mode for the device

For Blackwell or newer fully supported devices.

**nvmlReturn_t nvmlDeviceSetNvlinkBwMode
(nvmlDevice_t device, nvmlNvlinkSetBwMode_t
*setBwMode)**

Parameters

device

The identifier of the target device

setBwMode

Reference to nvmlNvlinkSetBwMode_t

Returns

- ▶ NVML_SUCCESS if the Bandwidth mode was successfully set
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or setBwMode is NULL
- ▶ NVML_ERROR_NO_PERMISSION if user does not have permission to change Bandwidth mode
- ▶ NVML_ERROR_NOT_SUPPORTED if this feature is not supported by the device
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH if the version specified is not supported

Description

Set the NvLink Reduced Bandwidth Mode for the device

For Blackwell or newer fully supported devices.

**nvmlReturn_t nvmlDeviceGetNvLinkInfo (nvmlDevice_t
device, nvmlNvLinkInfo_t *info)**

Parameters

device

The identifier of the target device

info

Reference to `nvmlNvLinkInfo_t`

Returns

- ▶ `NVML_SUCCESS` if query is success
- ▶ `NVML_ERROR_UNINITIALIZED` if the library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if device is invalid, or info is `NULL`
- ▶ `NVML_ERROR_ARGUMENT_VERSION_MISMATCH` if the version is invalid/unsupported
- ▶ `NVML_ERROR_NOT_SUPPORTED` if the device does not support this feature
- ▶ `NVML_ERROR_GPU_IS_LOST` if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Query NVLINK information associated with this device.

```
#define NVML_NVLINK_ERROR_COUNTER_BER_GET  
(((var) >> NVML_NVLINK_##type##_SHIFT) & \  
 (NVML_NVLINK_##type##_WIDTH)) \
```

Nvlink Error counter BER can be obtained using the below macros Ex -
`NVML_NVLINK_ERROR_COUNTER_BER_GET(var, BER_MANTISSA)`

5.20. Event Handling Methods

This chapter describes methods that NVML can perform against each device to register and wait for some event to occur.

```
struct nvmlEventData_t  
struct nvmlSystemEventSetCreateRequest_v1_t  
struct nvmlSystemEventSetFreeRequest_v1_t  
struct nvmlSystemRegisterEventRequest_v1_t  
struct nvmlSystemEventData_v1_t  
struct nvmlSystemEventSetWaitRequest_v1_t
```

Event Types

typedef struct nvmlEventSet_st *nvmlEventSet_t

Handle to an event set

**typedef struct nvmlSystemEventSet_st
*nvmlSystemEventSet_t**

System Event Set

**nvmlReturn_t nvmlEventSetCreate (nvmlEventSet_t
*set)**

Parameters

set

Reference in which to return the event handle

Returns

- ▶ NVML_SUCCESS if the event has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if set is NULL
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Create an empty set of events. Event set should be freed by [nvmlEventSetFree](#)

For Fermi or newer fully supported devices.

See also:

[nvmlEventSetFree](#)

nvmlReturn_t nvmlDeviceRegisterEvents (nvmlDevice_t device, unsigned long long eventTypes, nvmlEventSet_t set)

Parameters

device

The identifier of the target device

eventTypes

Bitmask of [Event Types](#) to record

set

Set to which add new event types

Returns

- ▶ NVML_SUCCESS if the event has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if eventTypes is invalid or set is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if the platform does not support this feature or some of requested event types
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Starts recording of events on a specified devices and add the events to specified [nvmlEventSet_t](#)

For Fermi or newer fully supported devices. ECC events are available only on ECC-enabled devices (see [nvmlDeviceGetTotalEccErrors](#)) Power capping events are available only on Power Management enabled devices (see [nvmlDeviceGetPowerManagementMode](#))

For Linux only.

This call starts recording of events on specific device. All events that occurred before this call are not recorded. Checking if some event occurred can be done with [nvmlEventSetWait_v2](#)

If function reports NVML_ERROR_UNKNOWN, event set is in undefined state and should be freed. If function reports NVML_ERROR_NOT_SUPPORTED, event set can still be used. None of the requested eventTypes are registered in that case.

See also:

[Event Types](#)

[nvmlDeviceGetSupportedEventTypes](#)

[nvmlEventSetWait](#)

[nvmlEventSetFree](#)

nvmlReturn_t nvmlDeviceGetSupportedEventTypes (nvmlDevice_t device, unsigned long long *eventTypes)

Parameters

device

The identifier of the target device

eventTypes

Reference in which to return bitmask of supported events

Returns

- ▶ NVML_SUCCESS if the eventTypes has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if eventType is NULL
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Returns information about events supported on device

For Fermi or newer fully supported devices.

Events are not supported on Windows. So this function returns an empty mask in eventTypes on Windows.

See also:

[Event Types](#)

[nvmlDeviceRegisterEvents](#)

`nvmlReturn_t nvmlEventSetWait_v2 (nvmlEventSet_t set, nvmlEventData_t *data, unsigned int timeoutms)`

Parameters

set

Reference to set of events to wait on

data

Reference in which to return event data

timeoutms

Maximum amount of wait time in milliseconds for registered event

Returns

- ▶ NVML_SUCCESS if the data has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if data is NULL
- ▶ NVML_ERROR_TIMEOUT if no event arrived in specified timeout or interrupt arrived
- ▶ NVML_ERROR_GPU_IS_LOST if a GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Waits on events and delivers events

For Fermi or newer fully supported devices.

If some events are ready to be delivered at the time of the call, function returns immediately. If there are no events ready to be delivered, function sleeps till event arrives but not longer than specified timeout. This function in certain conditions can return before specified timeout passes (e.g. when interrupt arrives)

On Windows, in case of Xid error, the function returns the most recent Xid error type seen by the system. If there are multiple Xid errors generated before `nvmlEventSetWait` is invoked then the last seen Xid error type is returned for all Xid error events.

On Linux, every Xid error event would return the associated event data and other information if applicable.

In MIG mode, if device handle is provided, the API reports all the events for the available instances, only if the caller has appropriate privileges. In absence of required privileges, only the events which affect all the instances (i.e. whole device) are reported.

This API does not currently support per-instance event reporting using MIG device handles.

See also:

[Event Types](#)

[nvmlDeviceRegisterEvents](#)

nvmlReturn_t nvmlEventSetFree (nvmlEventSet_t set)

Parameters

set

Reference to events to be released

Returns

- ▶ NVML_SUCCESS if the event has been successfully released
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Releases events in the set

For Fermi or newer fully supported devices.

See also:

[nvmlDeviceRegisterEvents](#)

nvmlReturn_t nvmlSystemEventSetCreate (nvmlSystemEventSetCreateRequest_t *request)

Parameters

request

Reference to nvmlSystemEventSetCreateRequest_t

Returns

- ▶ NVML_SUCCESS if the event has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if request is NULL
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH for unsupported version

- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Create an empty set of system events. Event set should be freed by [nvmlSystemEventSetFree](#)

For Fermi or newer fully supported devices.

See also:

[nvmlSystemEventSetFree](#)

**nvmlReturn_t nvmlSystemEventSetFree
(nvmlSystemEventSetFreeRequest_t *request)**

Parameters

request

Reference to [nvmlSystemEventSetFreeRequest_t](#)

Returns

- ▶ NVML_SUCCESS if the event has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if request is NULL
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH for unsupported version
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Releases system event set

For Fermi or newer fully supported devices.

See also:

[nvmlDeviceRegisterEvents](#)

**nvmlReturn_t nvmlSystemRegisterEvents
(nvmlSystemRegisterEventRequest_t *request)**

Parameters

request

Reference to the struct [nvmlSystemRegisterEventRequest_t](#)

Returns

- ▶ NVML_SUCCESS if the event has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if request is NULL
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH for unsupported version
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Starts recording of events on system and add the events to specified [nvmlSystemEventSet_t](#)

For Linux only.

This call starts recording of events on specific device. All events that occurred before this call are not recorded. Checking if some event occurred can be done with [nvmlSystemEventSetWait](#)

If function reports NVML_ERROR_UNKNOWN, event set is in undefined state and should be freed. If function reports NVML_ERROR_NOT_SUPPORTED, event set can still be used. None of the requested eventTypes are registered in that case.

See also:

[nvmlSystemEventType](#)

[nvmlSystemEventSetWait](#)

[nvmlEventSetFree](#)

[nvmlReturn_t nvmlSystemEventSetWait](#) **(nvmlSystemEventSetWaitRequest_t *request)**

Parameters**request**

Reference in which to [nvmlSystemEventSetWaitRequest_t](#)

Returns

- ▶ NVML_SUCCESS if the event has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if request is NULL
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH for unsupported version
- ▶ NVML_ERROR_TIMEOUT if no event notification after timeoutms
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Waits on system events and delivers events

For Fermi or newer fully supported devices.

If some events are ready to be delivered at the time of the call, function returns immediately. If there are no events ready to be delivered, function sleeps till event arrives but not longer than specified timeout. This function in certain conditions can return before specified timeout passes (e.g. when interrupt arrives)

if the return request->numEvent equals to request->dataSize, there might be outstanding event, it is recommended to call nvmlSystemEventSetWait again to query all the events.

See also:

[nvmlSystemEventType](#)

[nvmlSystemRegisterEvents](#)

**#define nvmlSystemEventTypeGpuDriverUnbind
0x0000000000000001LL**

System Event for GPU Driver Unbind.

Bitmask value of Driver Unbind System Event

**#define nvmlSystemEventTypeGpuDriverBind
0x0000000000000002LL**

Bitmask value of Driver Bind System Event.

5.20.1. Event Types

Event Handling Methods

Event Types which user can be notified about. See description of particular functions for details.

See [nvmlDeviceRegisterEvents](#) and [nvmlDeviceGetSupportedEventTypes](#) to check which devices support each event.

Types can be combined with bitwise or operator '|' when passed to [nvmlDeviceRegisterEvents](#)

#define nvmlEventTypeNone 0x0000000000000000LL

Mask with no events.

#define nvmlEventTypeSingleBitEccError 0x0000000000000001LL

Event about single bit ECC errors.

A corrected texture memory error is not an ECC error, so it does not generate a single bit event

#define nvmlEventTypeDoubleBitEccError 0x0000000000000002LL

Event about double bit ECC errors.

An uncorrected texture memory error is not an ECC error, so it does not generate a double bit event

#define nvmlEventTypePState 0x0000000000000004LL

Event about PState changes.

On Fermi architecture PState changes are also an indicator that GPU is throttling down due to no work being executed on the GPU, power capping or thermal capping. In a typical situation, Fermi-based GPU should stay in P0 for the duration of the execution of the compute process.

#define nvmlEventTypeXidCriticalError 0x0000000000000008LL

Event that Xid critical error occurred.

#define nvmlEventTypeClock 0x00000000000000010LL

Event about clock changes.

Kepler only

#define nvmlEventTypePowerSourceChange 0x00000000000000080LL

Event about AC/Battery power source changes.

#define nvmlEventMigConfigChange 0x000000000000000100LL

Event about MIG configuration changes.

**#define nvmlEventTypeSingleBitEccErrorStorm
0x000000000000000200LL**

Event about single bit ECC error storm.

```
#define nvmlEventTypeDramRetirementEvent  
0x0000000000000400LL
```

Event about DRAM retirement event.

```
#define nvmlEventTypeDramRetirementFailure  
0x0000000000000800LL
```

Event about DRAM retirement failure.

```
#define nvmlEventTypeNonFatalPoisonError 0x0000000000001000LL
```

Event for Non Fatal Poison.

```
#define nvmlEventTypeFatalPoisonError 0x0000000000002000LL
```

Event for Fatal Poison.

```
#define nvmlEventTypeGpuUnavailableError 0x0000000000004000LL
```

Event for GPU Unavailable.

```
#define nvmlEventTypeGpuRecoveryAction 0x0000000000008000LL
```

Event for GPU Recovery Action.

```
#define nvmlEventTypeAll (nvmlEventTypeNone  
\ | nvmlEventTypeSingleBitEccError \ |  
nvmlEventTypeDoubleBitEccError \ | nvmlEventTypePState \ |  
| nvmlEventTypeClock \ | nvmlEventTypeXidCriticalError \ |  
nvmlEventTypePowerSourceChange \ | nvmlEventMigConfigChange  
\\ | nvmlEventTypeSingleBitEccErrorStorm  
\\ | nvmlEventTypeDramRetirementEvent  
\\ | nvmlEventTypeDramRetirementFailure  
\\ | nvmlEventTypeNonFatalPoisonError  
\\ | nvmlEventTypeFatalPoisonError \ |  
nvmlEventTypeGpuUnavailableError \ |  
nvmlEventTypeGpuRecoveryAction)
```

Mask of all events.

5.21. Drain states

This chapter describes methods that NVML can perform against each device to control their drain state and recognition by NVML and NVIDIA kernel driver. These methods can be used with out-of-band tools to power on/off GPUs, enable robust reset scenarios, etc.

**`nvmlReturn_t nvmlDeviceModifyDrainState
(nvmlPciInfo_t *pciInfo, nvmlEnableState_t newState)`**

Parameters

pciInfo

The PCI address of the GPU drain state to be modified

newState

The drain state that should be entered, see [nvmlEnableState_t](#)

Returns

- ▶ NVML_SUCCESS if counters were successfully reset
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if nvmlIndex or newState is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature
- ▶ NVML_ERROR_NO_PERMISSION if the calling process has insufficient permissions to perform operation
- ▶ NVML_ERROR_IN_USE if the device has persistence mode turned on
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Modify the drain state of a GPU. This method forces a GPU to no longer accept new incoming requests. Any new NVML process will no longer see this GPU. Persistence mode for this GPU must be turned off before this call is made. Must be called as administrator. For Linux only.

For Pascal or newer fully supported devices. Some Kepler devices supported.

`nvmlReturn_t nvmlDeviceQueryDrainState (nvmlPciInfo_t *pciInfo, nvmlEnableState_t *currentState)`

Parameters

pciInfo

The PCI address of the GPU drain state to be queried

currentState

The current drain state for this GPU, see `nvmlEnableState_t`

Returns

- ▶ NVML_SUCCESS if counters were successfully reset
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if nvmlIndex or currentState is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Query the drain state of a GPU. This method is used to check if a GPU is in a currently draining state. For Linux only.

For Pascal or newer fully supported devices. Some Kepler devices supported.

`nvmlReturn_t nvmlDeviceRemoveGpu_v2 (nvmlPciInfo_t *pciInfo, nvmlDetachGpuState_t gpuState, nvmlPcieLinkState_t linkState)`

Parameters

pciInfo

The PCI address of the GPU to be removed

gpuState

Whether the GPU is to be removed, from the OS see `nvmlDetachGpuState_t`

linkState

Requested upstream PCIe link state, see `nvmlPcieLinkState_t`

Returns

- ▶ NVML_SUCCESS if counters were successfully reset
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized

- ▶ NVML_ERROR_INVALID_ARGUMENT if nvmlIndex is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the device doesn't support this feature
- ▶ NVML_ERROR_IN_USE if the device is still in use and cannot be removed

Description

This method will remove the specified GPU from the view of both NVML and the NVIDIA kernel driver as long as no other processes are attached. If other processes are attached, this call will return NVML_ERROR_IN_USE and the GPU will be returned to its original "draining" state. Note: the only situation where a process can still be attached after `nvmlDeviceModifyDrainState()` is called to initiate the draining state is if that process was using, and is still using, a GPU before the call was made. Also note, persistence mode counts as an attachment to the GPU thus it must be disabled prior to this call.

For long-running NVML processes please note that this will change the enumeration of current GPUs. For example, if there are four GPUs present and GPU1 is removed, the new enumeration will be 0-2. Also, device handles after the removed GPU will not be valid and must be re-established. Must be run as administrator. For Linux only.

For Pascal or newer fully supported devices. Some Kepler devices supported.

`nvmlReturn_t nvmlDeviceDiscoverGpus (nvmlPciInfo_t *pciInfo)`

Parameters

`pciInfo`

The PCI tree to be searched. Only the domain, bus, and device fields are used in this call.

Returns

- ▶ NVML_SUCCESS if counters were successfully reset
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if pciInfo is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if the operating system does not support this feature
- ▶ NVML_ERROR_OPERATING_SYSTEM if the operating system is denying this feature
- ▶ NVML_ERROR_NO_PERMISSION if the calling process has insufficient permissions to perform operation
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Request the OS and the NVIDIA kernel driver to rediscover a portion of the PCI subsystem looking for GPUs that were previously removed. The portion of the PCI tree can be narrowed by specifying a domain, bus, and device. If all are zeroes then the entire PCI tree will be searched. Please note that for long-running NVML processes the enumeration will change based on how many GPUs are discovered and where they are inserted in bus order.

In addition, all newly discovered GPUs will be initialized and their ECC scrubbed which may take several seconds per GPU. Also, all device handles are no longer guaranteed to be valid post discovery.

Must be run as administrator. For Linux only.

For Pascal or newer fully supported devices. Some Kepler devices supported.

5.22. Field Value Queries

This chapter describes NVML operations that are associated with retrieving Field Values from NVML

`nvmlReturn_t nvmlDeviceGetFieldValues (nvmlDevice_t device, int valuesCount, nvmlFieldValue_t *values)`

Parameters

device

The device handle of the GPU to request field values for

valuesCount

Number of entries in values that should be retrieved

values

Array of valuesCount structures to hold field values. Each value's fieldId must be populated prior to this call

Returns

- ▶ NVML_SUCCESS if any values in values were populated. Note that you must check the nvmlReturn field of each value for each individual status
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or values is NULL

Description

Request values for a list of fields for a device. This API allows multiple fields to be queried at once. If any of the underlying fieldIds are populated by the same driver call,

the results for those field IDs will be populated from a single call rather than making a driver call for each fieldId.

nvmlReturn_t nvmlDeviceClearFieldValues (nvmlDevice_t device, int valuesCount, nvmlFieldValue_t *values)

Parameters

device

The device handle of the GPU to request field values for

valuesCount

Number of entries in values that should be cleared

values

Array of valuesCount structures to hold field values. Each value's fieldId must be populated prior to this call

Returns

- ▶ NVML_SUCCESS if any values in values were cleared. Note that you must check the nvmlReturn field of each value for each individual status
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or values is NULL

Description

Clear values for a list of fields for a device. This API allows multiple fields to be cleared at once.

5.23. vGPU APIs

This chapter describes operations that are associated with NVIDIA vGPU Software products.

nvmlReturn_t nvmlDeviceGetVirtualizationMode (nvmlDevice_t device, nvmlGpuVirtualizationMode_t *pVirtualMode)

Parameters

device

Identifier of the target device

pVirtualMode

Reference to virtualization mode. One of NVML_GPU_VIRTUALIZATION_?

Returns

- ▶ NVML_SUCCESS if pVirtualMode is fetched
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or pVirtualMode is NULL
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

This method is used to get the virtualization mode corresponding to the GPU.

For Kepler or newer fully supported devices.

nvmlReturn_t nvmlDeviceGetHostVgpuMode (nvmlDevice_t device, nvmlHostVgpuMode_t *pHostVgpuMode)

Parameters**device**

The identifier of the target device

pHostVgpuMode

Reference in which to return the current vGPU mode

Returns

- ▶ NVML_SUCCESS if device's vGPU mode has been successfully retrieved
- ▶ NVML_ERROR_INVALID_ARGUMENT if device handle is 0 or pVgpuMode is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if device doesn't support this feature.
- ▶ NVML_ERROR_UNKNOWN if any unexpected error occurred

Description

Queries if SR-IOV host operation is supported on a vGPU supported device.

Checks whether SR-IOV host capability is supported by the device and the driver, and indicates device is in SR-IOV mode if both of these conditions are true.

`nvmlReturn_t nvmlDeviceSetVirtualizationMode (nvmlDevice_t device, nvmlGpuVirtualizationMode_t virtualMode)`

Parameters

device

Identifier of the target device

virtualMode

virtualization mode. One of NVML_GPU_VIRTUALIZATION_?

Returns

- ▶ NVML_SUCCESS if virtualMode is set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or virtualMode is NULL
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_NOT_SUPPORTED if setting of virtualization mode is not supported.
- ▶ NVML_ERROR_NO_PERMISSION if setting of virtualization mode is not allowed for this client.

Description

This method is used to set the virtualization mode corresponding to the GPU.

For Kepler or newer fully supported devices.

`nvmlReturn_t nvmlDeviceGetVgpuHeterogeneousMode (nvmlDevice_t device, nvmlVgpuHeterogeneousMode_t *pHeterogeneousMode)`

Parameters

device

The identifier of the target device

pHeterogeneousMode

Pointer to the caller-provided structure of nvmlVgpuHeterogeneousMode_t

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device is invalid or pHeterogeneousMode is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED If MIG is enabled or device doesn't support this feature
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the version of pHeterogeneousMode is invalid
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Get the vGPU heterogeneous mode for the device.

When in heterogeneous mode, a vGPU can concurrently host timesliced vGPUs with differing framebuffer sizes.

On successful return, the function returns pHeterogeneousMode->mode with the current vGPU heterogeneous mode. pHeterogeneousMode->version is the version number of the structure nvmlVgpuHeterogeneousMode_t, the caller should set the correct version number to retrieve the vGPU heterogeneous mode. pHeterogeneousMode->mode can either be **NVML_FEATURE_ENABLED** or **NVML_FEATURE_DISABLED**.

**nvmlReturn_t nvmlDeviceSetVgpuHeterogeneousMode
(nvmlDevice_t device, const
nvmlVgpuHeterogeneousMode_t *pHeterogeneousMode)**

Parameters**device**

Identifier of the target device

pHeterogeneousMode

Pointer to the caller-provided structure of nvmlVgpuHeterogeneousMode_t

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device or pHeterogeneousMode is NULL or pHeterogeneousMode->mode is invalid
- ▶ NVML_ERROR_IN_USE If the device is in use

- ▶ NVML_ERROR_NO_PERMISSION If user doesn't have permission to perform the operation
- ▶ NVML_ERROR_NOT_SUPPORTED If MIG is enabled or device doesn't support this feature
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the version of pHeterogeneousMode is invalid
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Enable or disable vGPU heterogeneous mode for the device.

When in heterogeneous mode, a vGPU can concurrently host timesliced vGPUs with differing framebuffer sizes.

API would return an appropriate error code upon unsuccessful activation. For example, the heterogeneous mode set will fail with error `NVML_ERROR_IN_USE` if any vGPU instance is active on the device. The caller of this API is expected to shutdown the vGPU VMs and retry setting the mode. On KVM platform, setting heterogeneous mode is allowed, if no MDEV device is created on the device, else will fail with same error `NVML_ERROR_IN_USE`. On successful return, the function updates the vGPU heterogeneous mode with the user provided `pHeterogeneousMode->mode`. `pHeterogeneousMode->version` is the version number of the structure `nvmlVgpuHeterogeneousMode_t`, the caller should set the correct version number to set the vGPU heterogeneous mode.

```
nvmlReturn_t nvmlVgpuInstanceGetPlacementId
(nvmlVgpuInstance_t vgpuInstance,
nvmlVgpuPlacementId_t *pPlacement)
```

Parameters

vgpuInstance

Identifier of the target vGPU instance

pPlacement

Pointer to vGPU placement ID structure `nvmlVgpuPlacementId_t`

Returns

- ▶ `NVML_SUCCESS` If information is successfully retrieved
- ▶ `NVML_ERROR_NOT_FOUND` If `vgpuInstance` does not match a valid active vGPU instance
- ▶ `NVML_ERROR_INVALID_ARGUMENT` If `vgpuInstance` is invalid or `pPlacement` is `NULL`

- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the version of pPlacement is invalid
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Query the placement ID of active vGPU instance.

When in vGPU heterogeneous mode, this function returns a valid placement ID as pPlacement->placementId else NVML_INVALID_VGPU_PLACEMENT_ID is returned. pPlacement->version is the version number of the structure nvmlVgpuPlacementId_t, the caller should set the correct version number to get placement id of the vGPU instance vgpuInstance.

nvmlReturn_t

nvmlDeviceGetVgpuTypeSupportedPlacements

(nvmlDevice_t device, nvmlVgpuTypeld_t vgpuTypeld, nvmlVgpuPlacementList_t *pPlacementList)

Parameters

device

Identifier of the target device

vgpuTypeld

Handle to vGPU type. The vGPU type ID

pPlacementList

Pointer to the vGPU placement structure nvmlVgpuPlacementList_t

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device or vgpuTypeld is invalid or pPlacementList is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED If device or vgpuTypeld isn't supported
- ▶ NVML_ERROR_NO_PERMISSION If user doesn't have permission to perform the operation
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the version of pPlacementList is invalid
- ▶ NVML_ERROR_INSUFFICIENT_SIZE If the buffer is small, element count is returned in pPlacementList->count
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Query the supported vGPU placement ID of the vGPU type.

The function returns an array of supported vGPU placement IDs for the specified vGPU type ID in the buffer provided by the caller at pPlacementList->placementIds. The required memory for the placementIds array must be allocated based on the maximum number of vGPU type instances, which is retrievable through [nvmlVgpuTypeGetMaxInstances\(\)](#). If the provided count by the caller is insufficient, the function will return NVML_ERROR_INSUFFICIENT_SIZE along with the number of required entries in pPlacementList->count. The caller should then reallocate a buffer with the size of pPlacementList->count * sizeof(pPlacementList->placementIds) and invoke the function again.

To obtain a list of homogeneous placement IDs, the caller needs to set pPlacementList->mode to NVML_VGPU_PGPU_HOMOGENEOUS_MODE. For heterogeneous placement IDs, pPlacementList->mode should be set to NVML_VGPU_PGPU_HETEROGENEOUS_MODE. By default, a list of heterogeneous placement IDs is returned.

**nvmlReturn_t
nvmlDeviceGetVgpuTypeCreatablePlacements
(nvmlDevice_t device, nvmlVgpuTypeld_t vgputypeld,
nvmlVgpuPlacementList_t *pPlacementList)**

Parameters

device

The identifier of the target device

vgputypeld

Handle to vGPU type. The vGPU type ID

pPlacementList

Pointer to the list of vGPU placement structure nvmlVgpuPlacementList_t

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device or vgputypeld is invalid or pPlacementList is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED If MIG is enabled or device or vgputypeld isn't supported
- ▶ NVML_ERROR_NO_PERMISSION If user doesn't have permission to perform the operation

- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the version of pPlacementList is invalid
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Query the creatable vGPU placement ID of the vGPU type.

An array of creatable vGPU placement IDs for the vGPU type ID indicated by vgpuTypeId is returned in the caller-supplied buffer of pPlacementList->placementIds. Memory needed for the placementIds array should be allocated based on maximum instances of a vGPU type which can be queried via [nvmIVgpuTypeGetMaxInstances\(\)](#). If the provided count by the caller is insufficient, the function will return NVML_ERROR_INSUFFICIENT_SIZE along with the number of required entries in pPlacementList->count. The caller should then reallocate a buffer with the size of pPlacementList->count * sizeof(pPlacementList->placementIds) and invoke the function again.

The creatable vGPU placement IDs may differ over time, as there may be restrictions on what type of vGPU the vGPU instance is running.

**nvmlReturn_t nvmIVgpuTypeGetGspHeapSize
(nvmlVgpuTypeld_t vgpuTypeld, unsigned long long
*gspHeapSize)**

Parameters

vgpuTypeld

Handle to vGPU type

gspHeapSize

Reference to return the GSP heap size value

Returns

- ▶ NVML_SUCCESS Successful completion
- ▶ NVML_ERROR_UNINITIALIZED If the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If vgpuTypeld is invalid, or gspHeapSize is NULL
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Retrieve the static GSP heap size of the vGPU type in bytes

`nvmlReturn_t nvmlVgpuTypeGetFbReservation (nvmlVgpuTypeld_t vgpuTypeld, unsigned long long *fbReservation)`

Parameters

vgpuTypeld

Handle to vGPU type

fbReservation

Reference to return the framebuffer reservation

Returns

- ▶ NVML_SUCCESS Successful completion
- ▶ NVML_ERROR_UNINITIALIZED If the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If vgpuTypeld is invalid, or fbReservation is NULL
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Retrieve the static framebuffer reservation of the vGPU type in bytes

`nvmlReturn_t nvmlVgpuInstanceGetRuntimeStateSize (nvmlVgpuInstance_t vgpuInstance, nvmlVgpuRuntimeState_t *pState)`

Parameters

vgpuInstance

Identifier of the target vGPU instance

pState

Pointer to the vGPU runtime state's structure `nvmlVgpuRuntimeState_t`

Returns

- ▶ NVML_SUCCESS If information is successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED If the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If vgpuInstance is invalid, or pState is NULL
- ▶ NVML_ERROR_NOT_FOUND If vgpuInstance does not match a valid active vGPU instance on the system

- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the version of pState is invalid
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Retrieve the currently used runtime state size of the vGPU instance

This size represents the maximum in-memory data size utilized by a vGPU instance during standard operation. This measurement is exclusive of frame buffer (FB) data size assigned to the vGPU instance.

For Maxwell or newer fully supported devices.

nvmlReturn_t nvmlDeviceSetVgpuCapabilities (nvmlDevice_t device, nvmlDeviceVgpuCapability_t capability, nvmlEnableState_t state)

Parameters

device

The identifier of the target device

capability

Specifies the nvmlDeviceVgpuCapability_t to be set

state

The target capability mode

Returns

- ▶ NVML_SUCCESS Successful completion
- ▶ NVML_ERROR_UNINITIALIZED If the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device is invalid, or capability is invalid, or state is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED The API is not supported in current state, or device not in vGPU mode
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Set the desirable vGPU capability of a device

Refer to the nvmlDeviceVgpuCapability_t structure for the specific capabilities that can be set. See [nvmlEnableState_t](#) for available state.

`nvmlReturn_t nvmlDeviceGetGridLicensableFeatures_v4 (nvmlDevice_t device, nvmlGridLicensableFeatures_t *pGridLicensableFeatures)`

Parameters

device

Identifier of the target device

pGridLicensableFeatures

Pointer to structure in which vGPU software licensable features are returned

Returns

- ▶ NVML_SUCCESS if licensable features are successfully retrieved
- ▶ NVML_ERROR_INVALID_ARGUMENT if pGridLicensableFeatures is NULL
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the vGPU Software licensable features.

Identifies whether the system supports vGPU Software Licensing. If it does, return the list of licensable feature(s) and their current license status.

5.24. vGPU Management

This chapter describes APIs supporting NVIDIA vGPU.

`nvmlReturn_t nvmlGetVgpuDriverCapabilities (nvmlVgpuDriverCapability_t capability, unsigned int *capResult)`

Parameters

capability

Specifies the nvmlVgpuDriverCapability_t to be queried

capResult

A boolean for the queried capability indicating that feature is supported

Returns

- ▶ NVML_SUCCESS successful completion

- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if capability is invalid, or capResult is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED the API is not supported in current state or devices not in vGPU mode
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the requested vGPU driver capability.

Refer to the `nvmlVgpuDriverCapability_t` structure for the specific capabilities that can be queried. The return value in `capResult` should be treated as a boolean, with a non-zero value indicating that the capability is supported.

For Maxwell or newer fully supported devices.

`nvmlReturn_t nvmlDeviceGetVgpuCapabilities (nvmlDevice_t device, nvmlDeviceVgpuCapability_t capability, unsigned int *capResult)`

Parameters

`device`

The identifier of the target device

`capability`

Specifies the `nvmlDeviceVgpuCapability_t` to be queried

`capResult`

Specifies that the queried capability is supported, and also returns capability's data

Returns

- ▶ NVML_SUCCESS successful completion
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, or capability is invalid, or `capResult` is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED the API is not supported in current state or device not in vGPU mode
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the requested vGPU capability for GPU.

Refer to the `nvmlDeviceVgpuCapability_t` structure for the specific capabilities that can be queried. The return value in `capResult` reports a non-zero value indicating that the capability is supported, and also reports the capability's data based on the queried capability.

For Maxwell or newer fully supported devices.

**`nvmlReturn_t nvmlDeviceGetSupportedVgpus
(nvmlDevice_t device, unsigned int *vgpuCount,
nvmlVgpuTypeId_t *vgpuTypeIds)`**

Parameters

device

The identifier of the target device

vgpuCount

Pointer to caller-supplied array size, and returns number of vGPU types

vgpuTypeIds

Pointer to caller-supplied array in which to return list of vGPU types

Returns

- ▶ `NVML_SUCCESS` successful completion
- ▶ `NVML_ERROR_INSUFFICIENT_SIZE` `vgpuTypeIds` buffer is too small, array element count is returned in `vgpuCount`
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if `vgpuCount` is `NULL` or `device` is invalid
- ▶ `NVML_ERROR_NOT_SUPPORTED` if vGPU is not supported by the device
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Retrieve the supported vGPU types on a physical GPU (device).

An array of supported vGPU types for the physical GPU indicated by `device` is returned in the caller-supplied buffer pointed at by `vgpuTypeIds`. The element count of `nvmlVgpuTypeId_t` array is passed in `vgpuCount`, and `vgpuCount` is used to return the number of vGPU types written to the buffer.

If the supplied buffer is not large enough to accommodate the vGPU type array, the function returns `NVML_ERROR_INSUFFICIENT_SIZE`, with the element count of `nvmlVgpuTypeId_t` array required in `vgpuCount`. To query the number of vGPU types supported for the GPU, call this function with `*vgpuCount = 0`. The code will return `NVML_ERROR_INSUFFICIENT_SIZE`, or `NVML_SUCCESS` if no vGPU types are supported.

nvmlReturn_t nvmlDeviceGetCreatableVgpus (nvmlDevice_t device, unsigned int *vgpuCount, nvmlVgpuTypeId_t *vgpuTypeIds)

Parameters

device

The identifier of the target device

vgpuCount

Pointer to caller-supplied array size, and returns number of vGPU types

vgpuTypeIds

Pointer to caller-supplied array in which to return list of vGPU types

Returns

- ▶ NVML_SUCCESS successful completion
- ▶ NVML_ERROR_INSUFFICIENT_SIZE vgpuTypeIds buffer is too small, array element count is returned in vgpuCount
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuCount is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if vGPU is not supported by the device
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the currently creatable vGPU types on a physical GPU (device).

An array of creatable vGPU types for the physical GPU indicated by device is returned in the caller-supplied buffer pointed at by vgpuTypeIds. The element count of nvmlVgpuTypeId_t array is passed in vgpuCount, and vgpuCount is used to return the number of vGPU types written to the buffer.

The creatable vGPU types for a device may differ over time, as there may be restrictions on what type of vGPU types can concurrently run on a device. For example, if only one vGPU type is allowed at a time on a device, then the creatable list will be restricted to whatever vGPU type is already running on the device.

If the supplied buffer is not large enough to accommodate the vGPU type array, the function returns NVML_ERROR_INSUFFICIENT_SIZE, with the element count of nvmlVgpuTypeId_t array required in vgpuCount. To query the number of vGPU types that can be created for the GPU, call this function with *vgpuCount = 0. The code will return NVML_ERROR_INSUFFICIENT_SIZE, or NVML_SUCCESS if no vGPU types are creatable.

```
nvmReturn_t nvmlVgpuTypeGetClass  
(nvmlVgpuTypeld_t vgpuTypeld, char *vgpuTypeClass,  
unsigned int *size)
```

Parameters

vgpuTypeId

Handle to vGPU type

vgpuTypeClass

Pointer to string array to return class in

size

Size of string

Returns

- ▶ NVML_SUCCESS successful completion
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuTypeId is invalid, or vgpuTypeClass is NULL
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if size is too small
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the class of a vGPU type. It will not exceed 64 characters in length (including the NUL terminator). See [nvmlConstants::NVML_DEVICE_NAME_BUFFER_SIZE](#).

For Kepler or newer fully supported devices.

```
nvmReturn_t nvmlVgpuTypeGetName  
(nvmlVgpuTypeld_t vgpuTypeld, char *vgpuTypeName,  
unsigned int *size)
```

Parameters

vgpuTypeId

Handle to vGPU type

vgpuTypeName

Pointer to buffer to return name

size

Size of buffer

Returns

- ▶ NVML_SUCCESS successful completion
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuTypeId is invalid, or name is NULL
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if size is too small
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the vGPU type name.

The name is an alphanumeric string that denotes a particular vGPU, e.g. GRID M60-2Q. It will not exceed 64 characters in length (including the NUL terminator). See [nvmlConstants::NVML_DEVICE_NAME_BUFFER_SIZE](#).

For Kepler or newer fully supported devices.

**nvmlReturn_t nvmlVgpuTypeGetGpuInstanceId
(nvmlVgpuTypeld_t vgpuTypeld, unsigned int
*gpuInstanceId)**

Parameters**vgpuTypeld**

Handle to vGPU type

gpuInstanceId

GPU Instance Profile ID

Returns

- ▶ NVML_SUCCESS successful completion
- ▶ NVML_ERROR_NOT_SUPPORTED if device is not in vGPU Host virtualization mode
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuTypeld is invalid, or gpuInstanceId is NULL
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the GPU Instance Profile ID for the given vGPU type ID. The API will return a valid GPU Instance Profile ID for the MIG capable vGPU types, else INVALID_GPU_INSTANCE_PROFILE_ID is returned.

For Kepler or newer fully supported devices.

```
nvmReturn_t nvmVgpuTypeGetDeviceID
(nvmVgpuTypeld_t vgpuTypeld, unsigned long long
*deviceID, unsigned long long *subsystemID)
```

Parameters

vgpuTypeld

Handle to vGPU type

deviceID

Device ID and vendor ID of the device contained in single 32 bit value

subsystemID

Subsystem ID and subsystem vendor ID of the device contained in single 32 bit value

Returns

- ▶ NVML_SUCCESS successful completion
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuTypeld is invalid, or deviceId or subsystemID are NULL
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the device ID of a vGPU type.

For Kepler or newer fully supported devices.

```
nvmReturn_t nvmVgpuTypeGetFrameBufferSize
(nvmVgpuTypeld_t vgpuTypeld, unsigned long long
*fbSize)
```

Parameters

vgpuTypeld

Handle to vGPU type

fbSize

Pointer to framebuffer size in bytes

Returns

- ▶ NVML_SUCCESS successful completion
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized

- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuTypeId is invalid, or fbSize is NULL
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the vGPU framebuffer size in bytes.

For Kepler or newer fully supported devices.

**nvmlReturn_t nvmlVgpuTypeGetNumDisplayHeads
(nvmlVgpuTypeld_t vgpuTypeld, unsigned int
*numDisplayHeads)**

Parameters

vgpuTypeld

Handle to vGPU type

numDisplayHeads

Pointer to number of display heads

Returns

- ▶ NVML_SUCCESS successful completion
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuTypeld is invalid, or numDisplayHeads is NULL
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve count of vGPU's supported display heads.

For Kepler or newer fully supported devices.

**nvmlReturn_t nvmlVgpuTypeGetResolution
(nvmlVgpuTypeld_t vgpuTypeld, unsigned int
displayIndex, unsigned int *xdim, unsigned int *ydim)**

Parameters

vgpuTypeld

Handle to vGPU type

displayIndex

Zero-based index of display head

xdim

Pointer to maximum number of pixels in X dimension

ydim

Pointer to maximum number of pixels in Y dimension

Returns

- ▶ NVML_SUCCESS successful completion
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuTypeId is invalid, or xdim or ydim are NULL, or displayIndex is out of range.
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve vGPU display head's maximum supported resolution.

For Kepler or newer fully supported devices.

```
nvmlReturn_t nvmlVgpuTypeGetLicense
(nvmlVgpuTypeld_t vgputypeld, char
 *vgpuTypeLicenseString, unsigned int size)
```

Parameters**vgpuTypeid**

Handle to vGPU type

vgpuTypeLicenseString

Pointer to buffer to return license info

size

Size of vgputypeLicenseString buffer

Returns

- ▶ NVML_SUCCESS successful completion
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgputypeId is invalid, or vgputypeLicenseString is NULL
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if size is too small
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve license requirements for a vGPU type

The license type and version required to run the specified vGPU type is returned as an alphanumeric string, in the form "<license name>,<version>", for example "GRID-Virtual-PC,2.0". If a vGPU is runnable with* more than one type of license, the licenses are delimited by a semicolon, for example "GRID-Virtual-PC,2.0;GRID-Virtual-WS,2.0;GRID-Virtual-WS-Ext,2.0".

The total length of the returned string will not exceed 128 characters, including the NUL terminator. See [nvmlVgpuConstants::NVML_GRID_LICENSE_BUFFER_SIZE](#).

For Kepler or newer fully supported devices.

**`nvmlReturn_t nvmlVgpuTypeGetFrameRateLimit
(nvmlVgpuTypeld_t vgpuTypeld, unsigned int
*frameRateLimit)`**

Parameters

vgpuTypeld

Handle to vGPU type

frameRateLimit

Reference to return the frame rate limit value

Returns

- ▶ NVML_SUCCESS successful completion
- ▶ NVML_ERROR_NOT_SUPPORTED if frame rate limiter is turned off for the vGPU type
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuTypeld is invalid, or frameRateLimit is NULL
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the static frame rate limit value of the vGPU type

For Kepler or newer fully supported devices.

**nvmlReturn_t nvmlVgpuTypeGetMaxInstances
(nvmlDevice_t device, nvmlVgpuTypeld_t vgpuTypeld,
unsigned int *vgpuInstanceCount)**

Parameters

device

The identifier of the target device

vgpuTypeld

Handle to vGPU type

vgpuInstanceCount

Pointer to get the max number of vGPU instances that can be created on a deicve for given vgpuTypeld

Returns

- ▶ NVML_SUCCESS successful completion
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuTypeld is invalid or is not supported on target device, or vgpuInstanceCount is NULL
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the maximum number of vGPU instances creatable on a device for given vGPU type

For Kepler or newer fully supported devices.

**nvmlReturn_t nvmlVgpuTypeGetMaxInstancesPerVm
(nvmlVgpuTypeld_t vgpuTypeld, unsigned int
*vgpuInstanceCountPerVm)**

Parameters

vgpuTypeld

Handle to vGPU type

vgpuInstanceCountPerVm

Pointer to get the max number of vGPU instances supported per VM for given vgpuTypeld

Returns

- ▶ NVML_SUCCESS successful completion
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuTypeId is invalid, or vgpuInstanceCountPerVm is NULL
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the maximum number of vGPU instances supported per VM for given vGPU type

For Kepler or newer fully supported devices.

**nvmlReturn_t nvmlVgpuTypeGetBAR1Info
(nvmlVgpuTypeId_t vgpuTypeId,
nvmlVgpuTypeBar1Info_t *bar1Info)**

Parameters**vgpuTypeId**

Handle to vGPU type

bar1Info

Pointer to the vGPU type BAR1 information structure nvmlVgpuTypeBar1Info_t

Returns

- ▶ NVML_SUCCESS successful completion
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuTypeId is invalid, or bar1Info is NULL
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the BAR1 info for given vGPU type.

For Maxwell or newer fully supported devices.

`nvmlReturn_t nvmlDeviceGetActiveVgpus (nvmlDevice_t device, unsigned int *vgpuCount, nvmlVgpuInstance_t *vgpuInstances)`

Parameters

device

The identifier of the target device

vgpuCount

Pointer which passes in the array size as well as get back the number of types

vgpuInstances

Pointer to array in which to return list of vGPU instances

Returns

- ▶ NVML_SUCCESS successful completion
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, or vgpuCount is NULL
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if size is too small
- ▶ NVML_ERROR_NOT_SUPPORTED if vGPU is not supported by the device
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the active vGPU instances on a device.

An array of active vGPU instances is returned in the caller-supplied buffer pointed at by vgpuInstances. The array element count is passed in vgpuCount, and vgpuCount is used to return the number of vGPU instances written to the buffer.

If the supplied buffer is not large enough to accommodate the vGPU instance array, the function returns NVML_ERROR_INSUFFICIENT_SIZE, with the element count of nvmlVgpuInstance_t array required in vgpuCount. To query the number of active vGPU instances, call this function with *vgpuCount = 0. The code will return NVML_ERROR_INSUFFICIENT_SIZE, or NVML_SUCCESS if no vGPU Types are supported.

For Kepler or newer fully supported devices.

```
nvmReturn_t nvmlVgpuInstanceGetVmID  
(nvmlVgpuInstance_t vgpuInstance, char *vmId,  
unsigned int size, nvmlVgpuVmIdType_t *vmIdType)
```

Parameters

vgpuInstance

Identifier of the target vGPU instance

vmId

Pointer to caller-supplied buffer to hold VM ID

size

Size of buffer in bytes

vmIdType

Pointer to hold VM ID type

Returns

- ▶ NVML_SUCCESS successful completion
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if vmId or vmIdType is NULL, or vgpuInstance is 0
- ▶ NVML_ERROR_NOT_FOUND if vgpuInstance does not match a valid active vGPU instance on the system
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if size is too small
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the VM ID associated with a vGPU instance.

The VM ID is returned as a string, not exceeding 80 characters in length (including the NUL terminator). See [nvmlConstants::NVML_DEVICE_UUID_BUFFER_SIZE](#).

The format of the VM ID varies by platform, and is indicated by the type identifier returned in vmIdType.

For Kepler or newer fully supported devices.

`nvmlReturn_t nvmlVgpuInstanceGetUUID (nvmlVgpuInstance_t vgpuInstance, char *uuid, unsigned int size)`

Parameters

vgpuInstance

Identifier of the target vGPU instance

uuid

Pointer to caller-supplied buffer to hold vGPU UUID

size

Size of buffer in bytes

Returns

- ▶ NVML_SUCCESS successful completion
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuInstance is 0, or uuid is NULL
- ▶ NVML_ERROR_NOT_FOUND if vgpuInstance does not match a valid active vGPU instance on the system
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if size is too small
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the UUID of a vGPU instance.

The UUID is a globally unique identifier associated with the vGPU, and is returned as a 5-part hexadecimal string, not exceeding 80 characters in length (including the NULL terminator). See [nvmlConstants::NVML_DEVICE_UUID_BUFFER_SIZE](#).

For Kepler or newer fully supported devices.

`nvmlReturn_t nvmlVgpuInstanceGetVmDriverVersion (nvmlVgpuInstance_t vgpuInstance, char *version, unsigned int length)`

Parameters

vgpuInstance

Identifier of the target vGPU instance

version

Caller-supplied buffer to return driver version string

length

Size of version buffer

Returns

- ▶ NVML_SUCCESS if version has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuInstance is 0
- ▶ NVML_ERROR_NOT_FOUND if vgpuInstance does not match a valid active vGPU instance on the system
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if length is too small
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the NVIDIA driver version installed in the VM associated with a vGPU.

The version is returned as an alphanumeric string in the caller-supplied buffer `version`. The length of the version string will not exceed 80 characters in length (including the NUL terminator). See [nvmIConstants::NVML_SYSTEM_DRIVER_VERSION_BUFFER_SIZE](#).

`nvmIVgpuInstanceGetVmDriverVersion()` may be called at any time for a vGPU instance. The guest VM driver version is returned as "Not Available" if no NVIDIA driver is installed in the VM, or the VM has not yet booted to the point where the NVIDIA driver is loaded and initialized.

For Kepler or newer fully supported devices.

`nvmIReturn_t nvmIVgpuInstanceGetFbUsage (nvmIVgpuInstance_t vgpuInstance, unsigned long long *fbUsage)`

Parameters**vgpuInstance**

The identifier of the target instance

fbUsage

Pointer to framebuffer usage in bytes

Returns

- ▶ NVML_SUCCESS successful completion

- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuInstance is 0, or fbUsage is NULL
- ▶ NVML_ERROR_NOT_FOUND if vgpuInstance does not match a valid active vGPU instance on the system
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the framebuffer usage in bytes.

Framebuffer usage is the amount of vGPU framebuffer memory that is currently in use by the VM.

For Kepler or newer fully supported devices.

**`nvmlReturn_t nvmlVgpuInstanceGetLicenseStatus
(nvmlVgpuInstance_t vgpuInstance, unsigned int
*licensed)`**

Parameters

`vgpuInstance`

Identifier of the target vGPU instance

`licensed`

Reference to return the licensing status

Returns

- ▶ NVML_SUCCESS if licensed has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuInstance is 0, or licensed is NULL
- ▶ NVML_ERROR_NOT_FOUND if vgpuInstance does not match a valid active vGPU instance on the system
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Deprecated Use [nvmlVgpuInstanceGetLicenseInfo_v2](#).

Retrieve the current licensing state of the vGPU instance.

If the vGPU is currently licensed, licensed is set to 1, otherwise it is set to 0.

For Kepler or newer fully supported devices.

nvmlReturn_t nvmlVgpuInstanceGetType (nvmlVgpuInstance_t vgpuInstance, nvmlVgpuTypeId_t *vgpuTypeId)

Parameters

vgpuInstance

Identifier of the target vGPU instance

vgpuTypeId

Reference to return the vgpuTypeId

Returns

- ▶ NVML_SUCCESS if vgpuTypeId has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuInstance is 0, or vgpuTypeId is NULL
- ▶ NVML_ERROR_NOT_FOUND if vgpuInstance does not match a valid active vGPU instance on the system
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the vGPU type of a vGPU instance.

Returns the vGPU type ID of vgpu assigned to the vGPU instance.

For Kepler or newer fully supported devices.

nvmlReturn_t nvmlVgpuInstanceGetFrameRateLimit (nvmlVgpuInstance_t vgpuInstance, unsigned int *frameRateLimit)

Parameters

vgpuInstance

Identifier of the target vGPU instance

frameRateLimit

Reference to return the frame rate limit

Returns

- ▶ NVML_SUCCESS if frameRateLimit has been set

- ▶ NVML_ERROR_NOT_SUPPORTED if frame rate limiter is turned off for the vGPU type
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuInstance is 0, or frameRateLimit is NULL
- ▶ NVML_ERROR_NOT_FOUND if vgpuInstance does not match a valid active vGPU instance on the system
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the frame rate limit set for the vGPU instance.

Returns the value of the frame rate limit set for the vGPU instance

For Kepler or newer fully supported devices.

`nvmlReturn_t nvmlVgpuInstanceGetEccMode (nvmlVgpuInstance_t vgpuInstance, nvmlEnableState_t *eccMode)`

Parameters

`vgpuInstance`

The identifier of the target vGPU instance

`eccMode`

Reference in which to return the current ECC mode

Returns

- ▶ NVML_SUCCESS if the vgpuInstance's ECC mode has been successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuInstance is 0, or mode is NULL
- ▶ NVML_ERROR_NOT_FOUND if vgpuInstance does not match a valid active vGPU instance on the system
- ▶ NVML_ERROR_NOT_SUPPORTED if the vGPU doesn't support this feature
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the current ECC mode of vGPU instance.

nvmlReturn_t nvmlVgpuInstanceGetEncoderCapacity (nvmlVgpuInstance_t vgpuInstance, unsigned int *encoderCapacity)

Parameters

vgpuInstance

Identifier of the target vGPU instance

encoderCapacity

Reference to an unsigned int for the encoder capacity

Returns

- ▶ NVML_SUCCESS if encoderCapacity has been retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuInstance is 0, or encoderQueryType is invalid
- ▶ NVML_ERROR_NOT_FOUND if vgpuInstance does not match a valid active vGPU instance on the system
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the encoder capacity of a vGPU instance, as a percentage of maximum encoder capacity with valid values in the range 0-100.

For Maxwell or newer fully supported devices.

nvmlReturn_t nvmlVgpuInstanceSetEncoderCapacity (nvmlVgpuInstance_t vgpuInstance, unsigned int encoderCapacity)

Parameters

vgpuInstance

Identifier of the target vGPU instance

encoderCapacity

Unsigned int for the encoder capacity value

Returns

- ▶ NVML_SUCCESS if encoderCapacity has been set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized

- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuInstance is 0, or encoderCapacity is out of range of 0-100.
- ▶ NVML_ERROR_NOT_FOUND if vgpuInstance does not match a valid active vGPU instance on the system
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Set the encoder capacity of a vGPU instance, as a percentage of maximum encoder capacity with valid values in the range 0-100.

For Maxwell or newer fully supported devices.

**nvmlReturn_t nvmlVgpuInstanceGetEncoderStats
(nvmlVgpuInstance_t vgpuInstance, unsigned int
*sessionCount, unsigned int *averageFps, unsigned int
*averageLatency)**

Parameters

vgpuInstance

Identifier of the target vGPU instance

sessionCount

Reference to an unsigned int for count of active encoder sessions

averageFps

Reference to an unsigned int for trailing average FPS of all active sessions

averageLatency

Reference to an unsigned int for encode latency in microseconds

Returns

- ▶ NVML_SUCCESS if sessionCount, averageFps and averageLatency is fetched
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if sessionCount , or averageFps or averageLatency is NULL or vgpuInstance is 0.
- ▶ NVML_ERROR_NOT_FOUND if vgpuInstance does not match a valid active vGPU instance on the system
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the current encoder statistics of a vGPU Instance

For Maxwell or newer fully supported devices.

**nvmlReturn_t nvmlVgpuInstanceGetEncoderSessions
(nvmlVgpuInstance_t vgpuInstance, unsigned int
*sessionCount, nvmlEncoderSessionInfo_t *sessionInfo)**

Parameters

vgpuInstance

Identifier of the target vGPU instance

sessionCount

Reference to caller supplied array size, and returns the number of sessions.

sessionInfo

Reference to caller supplied array in which the list of session information us returned.

Returns

- ▶ NVML_SUCCESS if sessionInfo is fetched
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if sessionCount is too small, array element count is returned in sessionCount
- ▶ NVML_ERROR_INVALID_ARGUMENT if sessionCount is NULL, or vgpuInstance is 0.
- ▶ NVML_ERROR_NOT_FOUND if vgpuInstance does not match a valid active vGPU instance on the system
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves information about all active encoder sessions on a vGPU Instance.

An array of active encoder sessions is returned in the caller-supplied buffer pointed at by sessionInfo. The array element count is passed in sessionCount, and sessionCount is used to return the number of sessions written to the buffer.

If the supplied buffer is not large enough to accommodate the active session array, the function returns NVML_ERROR_INSUFFICIENT_SIZE, with the element count of **nvmlEncoderSessionInfo_t** array required in sessionCount. To query the number of active encoder sessions, call this function with *sessionCount = 0. The code will return NVML_SUCCESS with number of active encoder sessions updated in *sessionCount.

For Maxwell or newer fully supported devices.

`nvmlReturn_t nvmlVgpuInstanceGetFBCStats (nvmlVgpuInstance_t vgpuInstance, nvmlFBCStats_t *fbcStats)`

Parameters

vgpuInstance

Identifier of the target vGPU instance

fbcStats

Reference to `nvmlFBCStats_t` structure containing NvFBC stats

Returns

- ▶ NVML_SUCCESS if fbcStats is fetched
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuInstance is 0, or fbcStats is NULL
- ▶ NVML_ERROR_NOT_FOUND if vgpuInstance does not match a valid active vGPU instance on the system
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the active frame buffer capture sessions statistics of a vGPU Instance

For Maxwell or newer fully supported devices.

`nvmlReturn_t nvmlVgpuInstanceGetFBCSessions (nvmlVgpuInstance_t vgpuInstance, unsigned int *sessionCount, nvmlFBCSessionInfo_t *sessionInfo)`

Parameters

vgpuInstance

Identifier of the target vGPU instance

sessionCount

Reference to caller supplied array size, and returns the number of sessions.

sessionInfo

Reference in which to return the session information

Returns

- ▶ NVML_SUCCESS if sessionInfo is fetched
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized

- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuInstance is 0, or sessionCount is NULL.
- ▶ NVML_ERROR_NOT_FOUND if vgpuInstance does not match a valid active vGPU instance on the system
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if sessionCount is too small, array element count is returned in sessionCount
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves information about active frame buffer capture sessions on a vGPU Instance.

An array of active FBC sessions is returned in the caller-supplied buffer pointed at by sessionInfo. The array element count is passed in sessionCount, and sessionCount is used to return the number of sessions written to the buffer.

If the supplied buffer is not large enough to accommodate the active session array, the function returns NVML_ERROR_INSUFFICIENT_SIZE, with the element count of `nvmlFBCSessionInfo_t` array required in sessionCount. To query the number of active FBC sessions, call this function with *sessionCount = 0. The code will return NVML_SUCCESS with number of active FBC sessions updated in *sessionCount.

For Maxwell or newer fully supported devices.

`hResolution`, `vResolution`, `averageFPS` and `averageLatency` data for a FBC session returned in `sessionInfo` may be zero if there are no new frames captured since the session started.

**`nvmlReturn_t nvmlVgpuInstanceGetGpuInstanceld
(nvmlVgpuInstance_t vgpuInstance, unsigned int
*gpuInstanceld)`**

Parameters

`vgpuInstance`

Identifier of the target vGPU instance

`gpuInstanceld`

GPU Instance ID

Returns

- ▶ NVML_SUCCESS successful completion
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized

- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuInstance is 0, or gpuInstanceId is NULL.
- ▶ NVML_ERROR_NOT_FOUND if vgpuInstance does not match a valid active vGPU instance on the system
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the GPU Instance ID for the given vGPU Instance. The API will return a valid GPU Instance ID for MIG backed vGPU Instance, else INVALID_GPU_INSTANCE_ID is returned.

For Kepler or newer fully supported devices.

```
nvmlReturn_t nvmlVgpuInstanceGetGpuPciId
(nvmlVgpuInstance_t vgpuInstance, char *vgpuPciId,
unsigned int *length)
```

Parameters

vgpuInstance

Identifier of the target vGPU instance

vgpuPciId

Caller-supplied buffer to return vGPU PCI Id string

length

Size of the vgpuPciId buffer

Returns

- ▶ NVML_SUCCESS if vGPU PCI Id is sucessfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuInstance is 0, or vgpuPciId is NULL
- ▶ NVML_ERROR_NOT_FOUND if vgpuInstance does not match a valid active vGPU instance on the system
- ▶ NVML_ERROR_DRIVER_NOT_LOADED if NVIDIA driver is not running on the vGPU instance
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if length is too small, length is set to required length
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves the PCI Id of the given vGPU Instance i.e. the PCI Id of the GPU as seen inside the VM.

The vGPU PCI id is returned as "00000000:00:00.0" if NVIDIA driver is not installed on the vGPU instance.

nvmlReturn_t nvmlVgpuTypeGetCapabilities (nvmlVgpuTypeId_t vgpuTypeId, nvmlVgpuCapability_t capability, unsigned int *capResult)

Parameters

vgpuTypeId

Handle to vGPU type

capability

Specifies the nvmlVgpuCapability_t to be queried

capResult

A boolean for the queried capability indicating that feature is supported

Returns

- ▶ NVML_SUCCESS successful completion
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuTypeId is invalid, or capability is invalid, or capResult is NULL
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the requested capability for a given vGPU type. Refer to the nvmlVgpuCapability_t structure for the specific capabilities that can be queried. The return value in capResult should be treated as a boolean, with a non-zero value indicating that the capability is supported.

For Maxwell or newer fully supported devices.

nvmlReturn_t nvmlVgpuInstanceGetMdevUUID (nvmlVgpuInstance_t vgpuInstance, char *mdevUuid, unsigned int size)

Parameters

vgpuInstance

Identifier of the target vGPU instance

mdevUuid

Pointer to caller-supplied buffer to hold MDEV UUID

size

Size of buffer in bytes

Returns

- ▶ NVML_SUCCESS successful completion
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_NOT_SUPPORTED on any hypervisor other than KVM
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuInstance is 0, or mdevUuid is NULL
- ▶ NVML_ERROR_NOT_FOUND if vgpuInstance does not match a valid active vGPU instance on the system
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if size is too small
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieve the MDEV UUID of a vGPU instance.

The MDEV UUID is a globally unique identifier of the mdev device assigned to the VM, and is returned as a 5-part hexadecimal string, not exceeding 80 characters in length (including the NULL terminator). MDEV UUID is displayed only on KVM platform. See [nvmlConstants::NVML_DEVICE_UUID_BUFFER_SIZE](#).

For Maxwell or newer fully supported devices.

nvmlReturn_t nvmlGpuInstanceGetCreatableVgpus (nvmlGpuInstance_t vgpuInstance, nvmlVgpuTypeIdInfo_t *pVgpus)

Parameters**vgpuInstance**

The GPU instance handle

pVgpus

Pointer to the caller-provided structure of `nvmlVgpuTypeIdInfo_t`

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized

- ▶ NVML_ERROR_INVALID_ARGUMENT If gpuInstance is NULL or invalid, or pVgpus is NULL or GPU Instance Id is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED If not on a vGPU host or an unsupported GPU
- ▶ NVML_ERROR_INSUFFICIENT_SIZE If pVgpus->vgpuTypeIds buffer is small
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the version of pVgpus is invalid
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Query the currently creatable vGPU types on a specific GPU Instance.

The function returns an array of vGPU types that can be created for a specified GPU instance. This array is stored in a caller-supplied buffer, with the buffer's element count passed through pVgpus->vgpuCount. The number of vGPU types written to the buffer is indicated by pVgpus->vgpuCount. If the buffer is too small to hold the vGPU type array, the function returns NVML_ERROR_INSUFFICIENT_SIZE and updates pVgpus->vgpuCount with the required element count.

To determine the creatable vGPUs for a GPU Instance, invoke this function with pVgpus->vgpuCount set to 0 and pVgpus->vgpuTypeIds as NULL. This will result in NVML_ERROR_INSUFFICIENT_SIZE being returned, along with the count value in pVgpus->vgpuCount.

The creatable vGPU types may differ over time, as there may be restrictions on what type of vGPUs can concurrently run on the device.

nvmlReturn_t

nvmlVgpuTypeGetMaxInstancesPerGpuInstance (nvmlVgpuTypeMaxInstance_t *pMaxInstance)

Parameters

pMaxInstance

Pointer to the caller-provided structure of nvmlVgpuTypeMaxInstance_t

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If pMaxInstance is NULL or pMaxInstance->vgpuTypeId is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED If not on a vGPU host or an unsupported GPU or non-MIG vGPU type

- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the version of pMaxInstance is invalid
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Retrieve the maximum number of vGPU instances per GPU instance for given vGPU type

**nvmlReturn_t nvmlGpuInstanceGetActiveVgpus
(nvmlGpuInstance_t gpuInstance,
nvmlActiveVgpuInstanceStateInfo_t *pVgpuInstanceStateInfo)**

Parameters

gpuInstance

The GPU instance handle

pVgpuInstanceStateInfo

Pointer to the vGPU instance information structure nvmlActiveVgpuInstanceStateInfo_t

Returns

- ▶ NVML_SUCCESS Successful completion
- ▶ NVML_ERROR_UNINITIALIZED If the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If gpuInstance is NULL or invalid, or pVgpuInstanceStateInfo is NULL or GPU Instance Id is invalid
- ▶ NVML_ERROR_INSUFFICIENT_SIZE pVgpuInstanceStateInfo->vgpuTypeIds buffer is too small, array element count is returned in pVgpuInstanceStateInfo->vgpuCount
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the version of pVgpuInstanceStateInfo is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED If not on a vGPU host or an unsupported GPU
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Retrieve the active vGPU instances within a GPU instance.

An array of active vGPU instances is returned in the caller-supplied buffer pointed at by pVgpuInstanceStateInfo->vgpuInstances. The array element count is passed in pVgpuInstanceStateInfo->vgpuCount, and pVgpuInstanceStateInfo->vgpuCount is used to return the number of vGPU instances written to the buffer.

If the supplied buffer is not large enough to accommodate the vGPU instance array, the function returns NVML_ERROR_INSUFFICIENT_SIZE, with the element count

of nvmlVgpuInstance_t array required in pVgpuInstanceState->vgpuCount. To query the number of active vGPU instances, call this function with pVgpuInstanceState->vgpuCount = 0 and pVgpuInstanceState->vgpuTypeIds = NULL. The code will return NVML_ERROR_INSUFFICIENT_SIZE, or NVML_SUCCESS if no vGPU Types are active.

nvmlReturn_t nvmlGpuInstanceSetVgpuSchedulerState (nvmlGpuInstance_t gpuInstance, nvmlVgpuSchedulerState_t *pScheduler)

Parameters

gpuInstance

The GPU instance handle

pScheduler

Pointer to the caller-provided structure of nvmlVgpuSchedulerState_t

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_INVALID_ARGUMENT If gpuInstance is NULL or invalid, or pScheduler is NULL or GPU Instance Id is invalid
- ▶ NVML_ERROR_RESET_REQUIRED If setting the state failed with fatal error, reboot is required
- ▶ NVML_ERROR_NOT_SUPPORTED If not on a vGPU host or an unsupported GPU or if any vGPU instance exists
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the version of pScheduler is invalid
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Set vGPU scheduler state for the given GPU instance

For Blackwell &tm GB20x; or newer fully supported devices.

Scheduler state and params will be allowed to set only when no VM is running within the GPU instance. In nvmlVgpuSchedulerState_t, IFF enableARRMode is enabled then provide the avgFactor and frequency as input. If enableARRMode is disabled then provide timeslice as input.

The scheduler state change won't persist across module load/unload and GPU Instance creation/deletion.

`nvmlReturn_t nvmlGpuInstanceGetVgpuSchedulerState (nvmlGpuInstance_t gpuInstance, nvmlVgpuSchedulerStateInfo_t *pSchedulerStateInfo)`

Parameters

gpuInstance

The GPU instance handle

pSchedulerStateInfo

Reference in which pSchedulerStateInfo is returned

Returns

- ▶ NVML_SUCCESS vGPU scheduler state is successfully obtained
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If gpuInstance is NULL or invalid, or pSchedulerStateInfo is NULL or GPU Instance Id is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED If not on a vGPU host or an unsupported GPU
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the version of pSchedulerStateInfo is invalid
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Returns the vGPU scheduler state for the given GPU instance. The information returned in nvmlVgpuSchedulerStateInfo_t is not relevant if the BEST EFFORT policy is set.

For Blackwell &tm GB20x; or newer fully supported devices.

`nvmlReturn_t nvmlGpuInstanceGetVgpuSchedulerLog (nvmlGpuInstance_t gpuInstance, nvmlVgpuSchedulerLogInfo_t *pSchedulerLogInfo)`

Parameters

gpuInstance

The GPU instance handle

pSchedulerLogInfo

Reference in which pSchedulerLogInfo is written

Returns

- ▶ NVML_SUCCESS vGPU scheduler logs are successfully obtained

- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If gpuInstance is NULL or invalid, or pSchedulerLogInfo is NULL or GPU Instance Id is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED If not on a vGPU host or an unsupported GPU
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the version of pSchedulerLogInfo is invalid
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Returns the vGPU scheduler logs for the given GPU instance. pSchedulerLogInfo points to a caller-allocated structure to contain the logs. The number of elements returned will never exceed NVML_SCHEDULER_SW_MAX_LOG_ENTRIES.

To get the entire logs, call the function atleast 5 times a second.

For Blackwell &tm GB20x; or newer fully supported devices.

nvmlReturn_t

nvmlGpuInstanceGetVgpuTypeCreatablePlacements **(nvmlGpuInstance_t gpuInstance,** **nvmlVgpuCreatablePlacementInfo_t** ***pCreatablePlacementInfo)**

Parameters

gpuInstance

The GPU instance handle

pCreatablePlacementInfo

Pointer to the list of vGPU creatable placement structure

`nvmlVgpuCreatablePlacementInfo_t`

Returns

- ▶ NVML_SUCCESS Successful completion
- ▶ NVML_ERROR_UNINITIALIZED If the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If gpuInstance is NULL or invalid, or pCreatablePlacementInfo is NULL or GPU Instance Id is invalid
- ▶ NVML_ERROR_INSUFFICIENT_SIZE If the buffer is small, element count is returned in pCreatablePlacementInfo->count
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the version of pCreatablePlacementInfo is invalid

- ▶ NVML_ERROR_NOT_SUPPORTED If not on a vGPU host or an unsupported GPU or vGPU heterogeneous mode is not enabled
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Query the creatable vGPU placement ID of the vGPU type within a GPU instance.

For Blackwell &tm GB20x; or newer fully supported devices.

An array of creatable vGPU placement IDs for the vGPU type ID indicated by pCreatablePlacementInfo->vgpuTypeId is returned in the caller-supplied buffer of pCreatablePlacementInfo->placementIds. Memory needed for the placementIds array should be allocated based on maximum instances of a vGPU type per GPU instance which can be queried via [nvmlVgpuTypeGetMaxInstancesPerGpuInstance\(\)](#). If the provided count by the caller is insufficient, the function will return NVML_ERROR_INSUFFICIENT_SIZE along with the number of required entries in pCreatablePlacementInfo->count. The caller should then reallocate a buffer with the size of pCreatablePlacementInfo->count * sizeof(pCreatablePlacementInfo->placementIds) and invoke the function again. The creatable vGPU placement IDs may differ over time, as there may be restrictions on what type of vGPU the vGPU instance is running.

nvmlReturn_t

nvmlGpuInstanceGetVgpuHeterogeneousMode

(**nvmlGpuInstance_t** **gpuInstance**,
nvmlVgpuHeterogeneousMode_t ***pHeterogeneousMode**)

Parameters

gpuInstance

The GPU instance handle

pHeterogeneousMode

Pointer to the caller-provided structure of **nvmlVgpuHeterogeneousMode_t**

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If gpuInstance is NULL or invalid, or pHeterogeneousMode is NULL or GPU Instance Id is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED If not on a vGPU host or an unsupported GPU or not in MIG mode
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the version of pHeterogeneousMode is invalid

- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Get the vGPU heterogeneous mode for the GPU instance.

When in heterogeneous mode, a vGPU can concurrently host timesliced vGPUs with differing framebuffer sizes.

On successful return, the function returns pHeterogeneousMode->mode with the current vGPU heterogeneous mode. pHeterogeneousMode->version is the version number of the structure nvmlVgpuHeterogeneousMode_t, the caller should set the correct version number to retrieve the vGPU heterogeneous mode. pHeterogeneousMode->mode can either be **NVML_FEATURE_ENABLED** or **NVML_FEATURE_DISABLED**.

For Blackwell &tm GB20x; or newer fully supported devices.

nvmlReturn_t

nvmlGpuInstanceSetVgpuHeterogeneousMode
(nvmlGpuInstance_t gpuInstance, const
nvmlVgpuHeterogeneousMode_t *pHeterogeneousMode)

Parameters

gpuInstance

The GPU instance handle

pHeterogeneousMode

Pointer to the caller-provided structure of nvmlVgpuHeterogeneousMode_t

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If gpuInstance is NULL or invalid, or pHeterogeneousMode is NULL or pHeterogeneousMode->mode is invalid or GPU Instance Id is invalid
- ▶ NVML_ERROR_IN_USE If the gpuInstance is in use
- ▶ NVML_ERROR_NOT_SUPPORTED If not on a vGPU host or an unsupported GPU
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the version of pHeterogeneousMode is invalid
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Enable or disable vGPU heterogeneous mode for the GPU instance.

When in heterogeneous mode, a vGPU can concurrently host timesliced vGPUs with differing framebuffer sizes.

API would return an appropriate error code upon unsuccessful activation. For example, the heterogeneous mode set will fail with error `NVML_ERROR_IN_USE` if any vGPU instance is active within the GPU instance. The caller of this API is expected to shutdown the vGPU VMs and retry setting the mode. On successful return, the function updates the vGPU heterogeneous mode with the user provided `pHeterogeneousMode->mode`. `pHeterogeneousMode->version` is the version number of the structure `nvmlVgpuHeterogeneousMode_t`, the caller should set the correct version number to set the vGPU heterogeneous mode.

5.25. vGPU Migration

This chapter describes operations that are associated with vGPU Migration.

`struct nvmlVgpuVersion_t`

`struct nvmlVgpuMetadata_t`

`struct nvmlVgpuPgpuMetadata_t`

`struct nvmlVgpuPgpuCompatibility_t`

`enum nvmlVgpuVmCompatibility_t`

vGPU VM compatibility codes

Values

`NVML_VGPU_VM_COMPATIBILITY_NONE = 0x0`

vGPU is not runnable

`NVML_VGPU_VM_COMPATIBILITY_COLD = 0x1`

vGPU is runnable from a cold / powered-off state (ACPI S5)

`NVML_VGPU_VM_COMPATIBILITY_HIBERNATE = 0x2`

vGPU is runnable from a hibernated state (ACPI S4)

`NVML_VGPU_VM_COMPATIBILITY_SLEEP = 0x4`

vGPU is runnable from a slept state (ACPI S3)

NVML_VGPU_VM_COMPATIBILITY_LIVE = 0x8
 vGPU is runnable from a live/paused (ACPI S0)

enum nvmlVgpuPgpuCompatibilityLimitCode_t

vGPU-pGPU compatibility limit codes

Values

NVML_VGPU_COMPATIBILITY_LIMIT_NONE = 0x0

Compatibility is not limited.

NVML_VGPU_COMPATIBILITY_LIMIT_HOST_DRIVER = 0x1

Compatibility is limited by host driver version.

NVML_VGPU_COMPATIBILITY_LIMIT_GUEST_DRIVER = 0x2

Compatibility is limited by guest driver version.

NVML_VGPU_COMPATIBILITY_LIMIT_GPU = 0x4

Compatibility is limited by GPU hardware.

NVML_VGPU_COMPATIBILITY_LIMIT_OTHER = 0x80000000

Compatibility is limited by an undefined factor.

**nvmlReturn_t nvmlVgpuInstanceGetMetadata
 (nvmlVgpuInstance_t vgpuInstance,
 nvmlVgpuMetadata_t *vgpuMetadata, unsigned int
 *bufferSize)**

Parameters

vgpuInstance

vGPU instance handle

vgpuMetadata

Pointer to caller-supplied buffer into which vGPU metadata is written

bufferSize

Size of vgpuMetadata buffer

Returns

- ▶ NVML_SUCCESS vGPU metadata structure was successfully returned
- ▶ NVML_ERROR_INSUFFICIENT_SIZE vgpuMetadata buffer is too small, required size is returned in bufferSize
- ▶ NVML_ERROR_INVALID_ARGUMENT if bufferSize is NULL or vgpuInstance is 0; if vgpuMetadata is NULL and the value of bufferSize is not 0.
- ▶ NVML_ERROR_NOT_FOUND if vgpuInstance does not match a valid active vGPU instance on the system
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Returns vGPU metadata structure for a running vGPU. The structure contains information about the vGPU and its associated VM such as the currently installed NVIDIA guest driver version, together with host driver version and an opaque data section containing internal state.

`nvmlVgpuInstanceGetMetadata()` may be called at any time for a vGPU instance. Some fields in the returned structure are dependent on information obtained from the guest VM, which may not yet have reached a state where that information is available. The current state of these dependent fields is reflected in the info structure's `nvmlVgpuGuestInfoState_t` field.

The VMM may choose to read and save the vGPU's VM info as persistent metadata associated with the VM, and provide it to Virtual GPU Manager when creating a vGPU for subsequent instances of the VM.

The caller passes in a buffer via `vgpuMetadata`, with the size of the buffer in `bufferSize`. If the vGPU Metadata structure is too large to fit in the supplied buffer, the function returns `NVML_ERROR_INSUFFICIENT_SIZE` with the size needed in `bufferSize`.

```
nvmlReturn_t nvmlDeviceGetVgpuMetadata
(nvmlDevice_t device, nvmlVgpuPgpuMetadata_t
*pgpuMetadata, unsigned int *bufferSize)
```

Parameters

device

The identifier of the target device

pgpuMetadata

Pointer to caller-supplied buffer into which `pgpuMetadata` is written

bufferSize

Pointer to size of `pgpuMetadata` buffer

Returns

- ▶ `NVML_SUCCESS` GPU metadata structure was successfully returned
- ▶ `NVML_ERROR_INSUFFICIENT_SIZE` `pgpuMetadata` buffer is too small, required size is returned in `bufferSize`
- ▶ `NVML_ERROR_INVALID_ARGUMENT` if `bufferSize` is `NULL` or `device` is invalid; if `pgpuMetadata` is `NULL` and the value of `bufferSize` is not 0.
- ▶ `NVML_ERROR_NOT_SUPPORTED` vGPU is not supported by the system
- ▶ `NVML_ERROR_UNKNOWN` on any unexpected error

Description

Returns a vGPU metadata structure for the physical GPU indicated by device. The structure contains information about the GPU and the currently installed NVIDIA host driver version that's controlling it, together with an opaque data section containing internal state.

The caller passes in a buffer via pgpuMetadata, with the size of the buffer in bufferSize. If the pgpuMetadata structure is too large to fit in the supplied buffer, the function returns NVML_ERROR_INSUFFICIENT_SIZE with the size needed in bufferSize.

```
nvmlReturn_t nvmlGetVgpuCompatibility
(nvmlVgpuMetadata_t *vgpuMetadata,
nvmlVgpuPgpuMetadata_t *pgpuMetadata,
nvmlVgpuPgpuCompatibility_t *compatibilityInfo)
```

Parameters

vgpuMetadata

Pointer to caller-supplied vGPU metadata structure

pgpuMetadata

Pointer to caller-supplied GPU metadata structure

compatibilityInfo

Pointer to caller-supplied buffer to hold compatibility info

Returns

- ▶ NVML_SUCCESS vGPU metadata structure was successfully returned
- ▶ NVML_ERROR_INVALID_ARGUMENT If vgpuMetadata or pgpuMetadata or bufferSize are NULL
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Takes a vGPU instance metadata structure read from [nvmlVgpuInstanceGetMetadata\(\)](#), and a vGPU metadata structure for a physical GPU read from [nvmlDeviceGetVgpuMetadata\(\)](#), and returns compatibility information of the vGPU instance and the physical GPU.

The caller passes in a buffer via compatibilityInfo, into which a compatibility information structure is written. The structure defines the states in which the vGPU / VM may be booted on the physical GPU. If the vGPU / VM compatibility with the physical GPU is limited, a limit code indicates the factor limiting compatibility. (see [nvmlVgpuPgpuCompatibilityLimitCode_t](#) for details).

Note: vGPU compatibility does not take into account dynamic capacity conditions that may limit a system's ability to boot a given vGPU or associated VM.

nvmlReturn_t nvmlDeviceGetPgpuMetadataString (nvmlDevice_t device, char *pgpuMetadata, unsigned int *bufferSize)

Parameters

device

The identifier of the target device

pgpuMetadata

Pointer to caller-supplied buffer into which pgpuMetadata is written

bufferSize

Pointer to size of pgpuMetadata buffer

Returns

- ▶ NVML_SUCCESS GPU metadata structure was successfully returned
- ▶ NVML_ERROR_INSUFFICIENT_SIZE pgpuMetadata buffer is too small, required size is returned in bufferSize
- ▶ NVML_ERROR_INVALID_ARGUMENT If bufferSize is NULL or device is invalid; if pgpuMetadata is NULL and the value of bufferSize is not 0.
- ▶ NVML_ERROR_NOT_SUPPORTED If vGPU is not supported by the system
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Returns the properties of the physical GPU indicated by the device in an ascii-encoded string format.

The caller passes in a buffer via pgpuMetadata, with the size of the buffer in bufferSize. If the string is too large to fit in the supplied buffer, the function returns NVML_ERROR_INSUFFICIENT_SIZE with the size needed in bufferSize.

`nvmlReturn_t nvmlDeviceGetVgpuSchedulerLog (nvmlDevice_t device, nvmlVgpuSchedulerLog_t *pSchedulerLog)`

Parameters

device

The identifier of the target device

pSchedulerLog

Reference in which pSchedulerLog is written

Returns

- ▶ NVML_SUCCESS vGPU scheduler logs were successfully obtained
- ▶ NVML_ERROR_INVALID_ARGUMENT If pSchedulerLog is NULL or device is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED If MIG is enabled or device not in vGPU host mode
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Returns the vGPU Software scheduler logs. pSchedulerLog points to a caller-allocated structure to contain the logs. The number of elements returned will never exceed NVML_SCHEDULER_SW_MAX_LOG_ENTRIES.

To get the entire logs, call the function atleast 5 times a second.

For Pascal or newer fully supported devices.

`nvmlReturn_t nvmlDeviceGetVgpuSchedulerState (nvmlDevice_t device, nvmlVgpuSchedulerGetState_t *pSchedulerState)`

Parameters

device

The identifier of the target device

pSchedulerState

Reference in which pSchedulerState is returned

Returns

- ▶ NVML_SUCCESS vGPU scheduler state is successfully obtained
- ▶ NVML_ERROR_INVALID_ARGUMENT If pSchedulerState is NULL or device is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED If MIG is enabled or device not in vGPU host mode
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Returns the vGPU scheduler state. The information returned in [nvmIVgpuSchedulerGetState_t](#) is not relevant if the BEST EFFORT policy is set.

For Pascal or newer fully supported devices.

nvmlReturn_t nvmlDeviceGetVgpuSchedulerCapabilities (nvmlDevice_t device, nvmlVgpuSchedulerCapabilities_t *pCapabilities)

Parameters**device**

The identifier of the target device

pCapabilities

Reference in which pCapabilities is written

Returns

- ▶ NVML_SUCCESS vGPU scheduler capabilities were successfully obtained
- ▶ NVML_ERROR_INVALID_ARGUMENT If pCapabilities is NULL or device is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED The API is not supported in current state or device not in vGPU host mode
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Returns the vGPU scheduler capabilities. The list of supported vGPU schedulers returned in [nvmIVgpuSchedulerCapabilities_t](#) is from the NVML_VGPU_SCHEDULER_POLICY_*. This list enumerates the supported scheduler policies if the engine is Graphics type. The other values in [nvmIVgpuSchedulerCapabilities_t](#) are also applicable if the engine is Graphics type. For other engine types, it is BEST EFFORT policy. If ARR is supported and enabled, scheduling frequency and averaging factor are applicable else timeSlice is applicable.

For Pascal or newer fully supported devices.

nvmlReturn_t nvmlDeviceSetVgpuSchedulerState (nvmlDevice_t device, nvmlVgpuSchedulerSetState_t *pSchedulerState)

Parameters

device

The identifier of the target device

pSchedulerState

vGPU pSchedulerState to set

Returns

- ▶ NVML_SUCCESS vGPU scheduler state has been successfully set
- ▶ NVML_ERROR_INVALID_ARGUMENT If pSchedulerState is NULL or device is invalid
- ▶ NVML_ERROR_RESET_REQUIRED If setting pSchedulerState failed with fatal error, reboot is required to overcome from this error.
- ▶ NVML_ERROR_NOT_SUPPORTED If MIG is enabled or device not in vGPU host mode or if any vGPU instance currently exists on the device
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Sets the vGPU scheduler state.

For Pascal or newer fully supported devices.

The scheduler state change won't persist across module load/unload. Scheduler state and params will be allowed to set only when no VM is running. In [nvmlVgpuSchedulerSetState_t](#), IFF enableARRMode is enabled then provide avgFactorForARR and frequency as input. If enableARRMode is disabled then provide timeslice as input.

`nvmlReturn_t nvmlGetVgpuVersion (nvmlVgpuVersion_t *supported, nvmlVgpuVersion_t *current)`

Parameters

supported

Pointer to the structure in which the preset range of vGPU versions supported by the NVIDIA vGPU Manager is written

current

Pointer to the structure in which the range of supported vGPU versions set by an administrator is written

Returns

- ▶ NVML_SUCCESS The vGPU version range structures were successfully obtained.
- ▶ NVML_ERROR_NOT_SUPPORTED The API is not supported.
- ▶ NVML_ERROR_INVALID_ARGUMENT The supported parameter or the current parameter is NULL.
- ▶ NVML_ERROR_UNKNOWN An error occurred while the data was being fetched.

Description

Query the ranges of supported vGPU versions.

This function gets the linear range of supported vGPU versions that is preset for the NVIDIA vGPU Manager and the range set by an administrator. If the preset range has not been overridden by `nvmlSetVgpuVersion`, both ranges are the same.

The caller passes pointers to the following `nvmlVgpuVersion_t` structures, into which the NVIDIA vGPU Manager writes the ranges: 1. supported structure that represents the preset range of vGPU versions supported by the NVIDIA vGPU Manager. 2. current structure that represents the range of supported vGPU versions set by an administrator. By default, this range is the same as the preset range.

`nvmlReturn_t nvmlSetVgpuVersion (nvmlVgpuVersion_t *vgpuVersion)`

Parameters

vgpuVersion

Pointer to a caller-supplied range of supported vGPU versions.

Returns

- ▶ NVML_SUCCESS The preset range of supported vGPU versions was successfully overridden.
- ▶ NVML_ERROR_NOT_SUPPORTED The API is not supported.
- ▶ NVML_ERROR_IN_USE The range was not overridden because a VM is running on the host.
- ▶ NVML_ERROR_INVALID_ARGUMENT The vgpuVersion parameter specifies a range that is outside the range supported by the NVIDIA vGPU Manager or if vgpuVersion is NULL.

Description

Override the preset range of vGPU versions supported by the NVIDIA vGPU Manager with a range set by an administrator.

This function configures the NVIDIA vGPU Manager with a range of supported vGPU versions set by an administrator. This range must be a subset of the preset range that the NVIDIA vGPU Manager supports. The custom range set by an administrator takes precedence over the preset range and is advertised to the guest VM for negotiating the vGPU version. See [nvmlGetVgpuVersion](#) for details of how to query the preset range of versions supported.

This function takes a pointer to vGPU version range structure [nvmlVgpuVersion_t](#) as input to override the preset vGPU version range that the NVIDIA vGPU Manager supports.

After host system reboot or driver reload, the range of supported versions reverts to the range that is preset for the NVIDIA vGPU Manager.

1. The range set by the administrator must be a subset of the preset range that the NVIDIA vGPU Manager supports. Otherwise, an error is returned.
2. If the range of supported guest driver versions does not overlap the range set by the administrator, the guest driver fails to load.
3. If the range of supported guest driver versions overlaps the range set by the administrator, the guest driver will load with a negotiated vGPU version that is the maximum value in the overlapping range.
4. No VMs must be running on the host when this function is called. If a VM is running on the host, the call to this function fails.

5.26. vGPU Utilization and Accounting

This chapter describes operations that are associated with vGPU Utilization and Accounting.

```
nvmlReturn_t nvmlDeviceGetVgpuUtilization
(nvmlDevice_t device, unsigned long long
lastSeenTimeStamp, nvmlValueType_t *sampleValType,
unsigned int *vgpuInstanceSamplesCount,
nvmlVgpuInstanceUtilizationSample_t
*utilizationSamples)
```

Parameters

device

The identifier for the target device

lastSeenTimeStamp

Return only samples with timestamp greater than lastSeenTimeStamp.

sampleValType

Pointer to caller-supplied buffer to hold the type of returned sample values

vgpuInstanceSamplesCount

Pointer to caller-supplied array size, and returns number of vGPU instances

utilizationSamples

Pointer to caller-supplied buffer in which vGPU utilization samples are returned

Returns

- ▶ NVML_SUCCESS if utilization samples are successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, vgpuInstanceSamplesCount or sampleValType is NULL, or a sample count of 0 is passed with a non-NULL utilizationSamples
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if supplied vgpuInstanceSamplesCount is too small to return samples for all vGPU instances currently executing on the device
- ▶ NVML_ERROR_NOT_SUPPORTED if vGPU is not supported by the device
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_NOT_FOUND if sample entries are not found
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves current utilization for vGPUs on a physical GPU (device).

For Kepler or newer fully supported devices.

Reads recent utilization of GPU SM (3D/Compute), framebuffer, video encoder, and video decoder for vGPU instances running on a device. Utilization values are returned as an array of utilization sample structures in the caller-supplied buffer pointed at by utilizationSamples. One utilization sample structure is returned per vGPU instance, and includes the CPU timestamp at which the samples were recorded. Individual utilization values are returned as "unsigned int" values in `nvmlValue_t` unions. The function sets the caller-supplied sampleValType to NVML_VALUE_TYPE_UNSIGNED_INT to indicate the returned value type.

To read utilization values, first determine the size of buffer required to hold the samples by invoking the function with utilizationSamples set to NULL. The function will return NVML_ERROR_INSUFFICIENT_SIZE, with the current vGPU instance count in vgpuInstanceSamplesCount, or NVML_SUCCESS if the current vGPU instance count is zero. The caller should allocate a buffer of size vgpuInstanceSamplesCount * sizeof(`nvmlVgpuInstancesUtilizationSample_t`). Invoke the function again with the allocated buffer passed in utilizationSamples, and vgpuInstanceSamplesCount set to the number of entries the buffer is sized for.

On successful return, the function updates vgpuInstanceSampleCount with the number of vGPU utilization sample structures that were actually written. This may differ from a previously read value as vGPU instances are created or destroyed.

`lastSeenTimeStamp` represents the CPU timestamp in microseconds at which utilization samples were last read. Set it to 0 to read utilization based on all the samples maintained by the driver's internal sample buffer. Set `lastSeenTimeStamp` to a `timeStamp` retrieved from a previous query to read utilization since the previous query.

`nvmlReturn_t`

`nvmlDeviceGetVgpuInstancesUtilizationInfo`

(`nvmlDevice_t device,`

`nvmlVgpuInstancesUtilizationInfo_t *vgpuUtilInfo)`

Parameters

`device`

The identifier for the target device

`vgpuUtilInfo`

Pointer to the caller-provided structure of `nvmlVgpuInstancesUtilizationInfo_t`

Returns

- ▶ NVML_SUCCESS If utilization samples are successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED If the library has not been successfully initialized

- ▶ NVML_ERROR_INVALID_ARGUMENT If device is invalid, vgpuUtilInfo is NULL, or vgpuUtilInfo->vgpuInstanceCount is 0
- ▶ NVML_ERROR_NOT_SUPPORTED If vGPU is not supported by the device
- ▶ NVML_ERROR_GPU_IS_LOST If the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the version of vgpuUtilInfo is invalid
- ▶ NVML_ERROR_INSUFFICIENT_SIZE If vgpuUtilInfo->vgpuUtilArray is NULL, or the buffer size of vgpuUtilInfo->vgpuInstanceCount is too small. The caller should check the current vGPU instance count from the returned vgpuUtilInfo->vgpuInstanceCount, and call the function again with a buffer of size vgpuUtilInfo->vgpuInstanceCount * sizeof(nvmlVgpuInstanceUtilizationInfo_t)
- ▶ NVML_ERROR_NOT_FOUND If sample entries are not found
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Retrieves recent utilization for vGPU instances running on a physical GPU (device).

For Kepler or newer fully supported devices.

Reads recent utilization of GPU SM (3D/Compute), framebuffer, video encoder, video decoder, jpeg decoder, and OFA for vGPU instances running on a device. Utilization values are returned as an array of utilization sample structures in the caller-supplied buffer pointed at by vgpuUtilInfo->vgpuUtilArray. One utilization sample structure is returned per vGPU instance, and includes the CPU timestamp at which the samples were recorded. Individual utilization values are returned as "unsigned int" values in **nvmValue_t** unions. The function sets the caller-supplied vgpuUtilInfo->sampleValType to NVML_VALUE_TYPE_UNSIGNED_INT to indicate the returned value type.

To read utilization values, first determine the size of buffer required to hold the samples by invoking the function with vgpuUtilInfo->vgpuUtilArray set to NULL. The function will return NVML_ERROR_INSUFFICIENT_SIZE, with the current vGPU instance count in vgpuUtilInfo->vgpuInstanceCount, or NVML_SUCCESS if the current vGPU instance count is zero. The caller should allocate a buffer of size vgpuUtilInfo->vgpuInstanceCount * sizeof(nvmlVgpuInstanceUtilizationInfo_t). Invoke the function again with the allocated buffer passed in vgpuUtilInfo->vgpuUtilArray, and vgpuUtilInfo->vgpuInstanceCount set to the number of entries the buffer is sized for.

On successful return, the function updates vgpuUtilInfo->vgpuInstanceCount with the number of vGPU utilization sample structures that were actually written. This may differ from a previously read value as vGPU instances are created or destroyed.

vgpuUtilInfo->lastSeenTimeStamp represents the CPU timestamp in microseconds at which utilization samples were last read. Set it to 0 to read utilization based on all the samples maintained by the driver's internal sample buffer. Set vgpuUtilInfo-

>lastSeenTimeStamp to a timeStamp retrieved from a previous query to read utilization since the previous query.

```
nvmlReturn_t nvmlDeviceGetVgpuProcessUtilization
(nvmlDevice_t device, unsigned long
long lastSeenTimeStamp, unsigned
int *vgpuProcessSamplesCount,
nvmlVgpuProcessUtilizationSample_t
*utilizationSamples)
```

Parameters

device

The identifier for the target device

lastSeenTimeStamp

Return only samples with timestamp greater than lastSeenTimeStamp.

vgpuProcessSamplesCount

Pointer to caller-supplied array size, and returns number of processes running on vGPU instances

utilizationSamples

Pointer to caller-supplied buffer in which vGPU sub process utilization samples are returned

Returns

- ▶ NVML_SUCCESS if utilization samples are successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid, vgpuProcessSamplesCount or a sample count of 0 is passed with a non-NUL utilizationSamples
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if supplied vgpuProcessSamplesCount is too small to return samples for all vGPU instances currently executing on the device
- ▶ NVML_ERROR_NOT_SUPPORTED if vGPU is not supported by the device
- ▶ NVML_ERROR_GPU_IS_LOST if the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_NOT_FOUND if sample entries are not found
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Retrieves current utilization for processes running on vGPUs on a physical GPU (device).

For Maxwell or newer fully supported devices.

Reads recent utilization of GPU SM (3D/Compute), framebuffer, video encoder, and video decoder for processes running on vGPU instances active on a device. Utilization values are returned as an array of utilization sample structures in the caller-supplied buffer pointed at by utilizationSamples. One utilization sample structure is returned per process running on vGPU instances, that had some non-zero utilization during the last sample period. It includes the CPU timestamp at which the samples were recorded. Individual utilization values are returned as "unsigned int" values.

To read utilization values, first determine the size of buffer required to hold the samples by invoking the function with utilizationSamples set to NULL. The function will return NVML_ERROR_INSUFFICIENT_SIZE, with the current vGPU instance count in vgpuProcessSamplesCount. The caller should allocate a buffer of size vgpuProcessSamplesCount * sizeof(nvmlVgpuProcessUtilizationSample_t). Invoke the function again with the allocated buffer passed in utilizationSamples, and vgpuProcessSamplesCount set to the number of entries the buffer is sized for.

On successful return, the function updates vgpuSubProcessSampleCount with the number of vGPU sub process utilization sample structures that were actually written. This may differ from a previously read value depending on the number of processes that are active in any given sample period.

lastSeenTimeStamp represents the CPU timestamp in microseconds at which utilization samples were last read. Set it to 0 to read utilization based on all the samples maintained by the driver's internal sample buffer. Set lastSeenTimeStamp to a timeStamp retrieved from a previous query to read utilization since the previous query.

```
nvmlReturn_t
nvmlDeviceGetVgpuProcessesUtilizationInfo
(nvmlDevice_t device,
nvmlVgpuProcessesUtilizationInfo_t *vgpuProcUtilInfo)
```

Parameters

device

The identifier for the target device

vgpuProcUtilInfo

Pointer to the caller-provided structure of nvmlVgpuProcessesUtilizationInfo_t

Returns

- ▶ NVML_SUCCESS If utilization samples are successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED If the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device is invalid, or vgpuProcUtilInfo is null
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the version of vgpuProcUtilInfo is invalid
- ▶ NVML_ERROR_INSUFFICIENT_SIZE If vgpuProcUtilInfo->vgpuProcUtilArray is null, or supplied vgpuProcUtilInfo->vgpuProcessCount is too small to return samples for all processes on vGPU instances currently executing on the device. The caller should check the current processes count from the returned vgpuProcUtilInfo->vgpuProcessCount, and call the function again with a buffer of size vgpuProcUtilInfo->vgpuProcessCount * sizeof(nvmlVgpuProcessUtilizationSample_t)
- ▶ NVML_ERROR_NOT_SUPPORTED If vGPU is not supported by the device
- ▶ NVML_ERROR_GPU_IS_LOST If the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_NOT_FOUND If sample entries are not found
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Retrieves recent utilization for processes running on vGPU instances on a physical GPU (device).

For Maxwell or newer fully supported devices.

Reads recent utilization of GPU SM (3D/Compute), framebuffer, video encoder, video decoder, jpeg decoder, and OFA for processes running on vGPU instances active on a device. Utilization values are returned as an array of utilization sample structures in the caller-supplied buffer pointed at by vgpuProcUtilInfo->vgpuProcUtilArray. One utilization sample structure is returned per process running on vGPU instances, that had some non-zero utilization during the last sample period. It includes the CPU timestamp at which the samples were recorded. Individual utilization values are returned as "unsigned int" values.

To read utilization values, first determine the size of buffer required to hold the samples by invoking the function with vgpuProcUtilInfo->vgpuProcUtilArray set to NULL. The function will return NVML_ERROR_INSUFFICIENT_SIZE, with the current processes' count running on vGPU instances in vgpuProcUtilInfo->vgpuProcessCount. The caller should allocate a buffer of size vgpuProcUtilInfo->vgpuProcessCount * sizeof(nvmlVgpuProcessUtilizationSample_t). Invoke the function again with the allocated buffer passed in vgpuProcUtilInfo->vgpuProcUtilArray, and vgpuProcUtilInfo->vgpuProcessCount set to the number of entries the buffer is sized for.

On successful return, the function updates `vgpuProcUtilInfo->vgpuProcessCount` with the number of vGPU sub process utilization sample structures that were actually written. This may differ from a previously read value depending on the number of processes that are active in any given sample period.

`vgpuProcUtilInfo->lastSeenTimeStamp` represents the CPU timestamp in microseconds at which utilization samples were last read. Set it to 0 to read utilization based on all the samples maintained by the driver's internal sample buffer. Set `vgpuProcUtilInfo->lastSeenTimeStamp` to a timeStamp retrieved from a previous query to read utilization since the previous query.

`nvmlReturn_t nvmlVgpuInstanceGetAccountingMode (nvmlVgpuInstance_t vgpuInstance, nvmlEnableState_t *mode)`

Parameters

vgpuInstance

The identifier of the target vGPU instance

mode

Reference in which to return the current accounting mode

Returns

- ▶ NVML_SUCCESS if the mode has been successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if `vgpuInstance` is 0, or `mode` is NULL
- ▶ NVML_ERROR_NOT_FOUND if `vgpuInstance` does not match a valid active vGPU instance on the system
- ▶ NVML_ERROR_NOT_SUPPORTED if the vGPU doesn't support this feature
- ▶ NVML_ERROR_DRIVER_NOT_LOADED if NVIDIA driver is not running on the vGPU instance
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Queries the state of per process accounting mode on vGPU.

For Maxwell or newer fully supported devices.

nvmlReturn_t nvmlVgpuInstanceGetAccountingPids (nvmlVgpuInstance_t vgpuInstance, unsigned int *count, unsigned int *pids)

Parameters

vgpuInstance

The identifier of the target vGPU instance

count

Reference in which to provide the pids array size, and to return the number of elements ready to be queried

pids

Reference in which to return list of process ids

Returns

- ▶ NVML_SUCCESS if pids were successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuInstance is 0, or count is NULL
- ▶ NVML_ERROR_NOT_FOUND if vgpuInstance does not match a valid active vGPU instance on the system
- ▶ NVML_ERROR_NOT_SUPPORTED if the vGPU doesn't support this feature or accounting mode is disabled
- ▶ NVML_ERROR_INSUFFICIENT_SIZE if count is too small (count is set to expected value)
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Queries list of processes running on vGPU that can be queried for accounting stats. The list of processes returned can be in running or terminated state.

For Maxwell or newer fully supported devices.

To just query the maximum number of processes that can be queried, call this function with *count = 0 and pids=NULL. The return code will be NVML_ERROR_INSUFFICIENT_SIZE, or NVML_SUCCESS if list is empty.

For more details see [nvmlVgpuInstanceGetAccountingStats](#).

In case of PID collision some processes might not be accessible before the circular buffer is full.

See also:

[nvmlVgpuInstanceGetAccountingPids](#)

**nvmlReturn_t nvmlVgpuInstanceGetAccountingStats
(nvmlVgpuInstance_t vgpuInstance, unsigned int pid,
nvmlAccountingStats_t *stats)**

Parameters**vgpuInstance**

The identifier of the target vGPU instance

pid

Process Id of the target process to query stats for

stats

Reference in which to return the process's accounting stats

Returns

- ▶ NVML_SUCCESS if stats have been successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuInstance is 0, or stats is NULL
- ▶ NVML_ERROR_NOT_FOUND if vgpuInstance does not match a valid active vGPU instance on the system or stats is not found
- ▶ NVML_ERROR_NOT_SUPPORTED if the vGPU doesn't support this feature or accounting mode is disabled
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Queries process's accounting stats.

For Maxwell or newer fully supported devices.

Accounting stats capture GPU utilization and other statistics across the lifetime of a process, and can be queried during life time of the process or after its termination. The time field in [nvmlAccountingStats_t](#) is reported as 0 during the lifetime of the process and updated to actual running time after its termination. Accounting stats are kept in a circular buffer, newly created processes overwrite information about old processes.

See [nvmlAccountingStats_t](#) for description of each returned metric. List of processes that can be queried can be retrieved from [nvmlVgpuInstanceGetAccountingPids](#).

- ▶ Accounting Mode needs to be on. See [nvmlVgpuInstanceGetAccountingMode](#).

- ▶ Only compute and graphics applications stats can be queried. Monitoring applications stats can't be queried since they don't contribute to GPU utilization.
- ▶ In case of pid collision stats of only the latest process (that terminated last) will be reported

`nvmlReturn_t nvmlVgpuInstanceClearAccountingPids (nvmlVgpuInstance_t vgpuInstance)`

Parameters

`vgpuInstance`

The identifier of the target vGPU instance

Returns

- ▶ NVML_SUCCESS if accounting information has been cleared
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuInstance is invalid
- ▶ NVML_ERROR_NO_PERMISSION if the user doesn't have permission to perform this operation
- ▶ NVML_ERROR_NOT_SUPPORTED if the vGPU doesn't support this feature or accounting mode is disabled
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Clears accounting information of the vGPU instance that have already terminated.

For Maxwell or newer fully supported devices. Requires root/admin permissions.

- ▶ Accounting Mode needs to be on. See [nvmlVgpuInstanceGetAccountingMode](#).
- ▶ Only compute and graphics applications stats are reported and can be cleared since monitoring applications stats don't contribute to GPU utilization.

```
nvmlReturn_t nvmlVgpuInstanceGetLicenseInfo_v2
(nvmlVgpuInstance_t vgpuInstance,
nvmlVgpuLicenseInfo_t *licenseInfo)
```

Parameters

vgpuInstance

Identifier of the target vGPU instance

licenseInfo

Pointer to vGPU license information structure

Returns

- ▶ NVML_SUCCESS if information is successfully retrieved
- ▶ NVML_ERROR_INVALID_ARGUMENT if vgpuInstance is 0, or licenseInfo is NULL
- ▶ NVML_ERROR_NOT_FOUND if vgpuInstance does not match a valid active vGPU instance on the system
- ▶ NVML_ERROR_DRIVER_NOT_LOADED if NVIDIA driver is not running on the vGPU instance
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Query the license information of the vGPU instance.

For Maxwell or newer fully supported devices.

5.27. Excluded GPU Queries

This chapter describes NVML operations that are associated with excluded GPUs.

struct nvmlExcludedDeviceInfo_t

```
nvmlReturn_t nvmlGetExcludedDeviceCount (unsigned
int *deviceCount)
```

Parameters

deviceCount

Reference in which to return the number of excluded devices

Returns

- ▶ NVML_SUCCESS if deviceCount has been set
- ▶ NVML_ERROR_INVALID_ARGUMENT if deviceCount is NULL

Description

Retrieves the number of excluded GPU devices in the system.

For all products.

nvmlReturn_t nvmlGetExcludedDeviceInfoByIndex (unsigned int index, nvmlExcludedDeviceInfo_t *info)

Parameters**index**

The index of the target GPU, ≥ 0 and $<$ deviceCount

info

Reference in which to return the device information

Returns

- ▶ NVML_SUCCESS if device has been set
- ▶ NVML_ERROR_INVALID_ARGUMENT if index is invalid or info is NULL

Description

Acquire the device information for an excluded GPU device, based on its index.

For all products.

Valid indices are derived from the deviceCount returned by [nvmlGetExcludedDeviceCount\(\)](#). For example, if deviceCount is 2 the valid indices are 0 and 1, corresponding to GPU 0 and GPU 1.

See also:

[nvmlGetExcludedDeviceCount](#)

5.28. PRM Access

This chapter describes NVML operations that are associated with PRM register reads

struct nvmlPRMTLV_v1_t

```
nvmlReturn_t nvmlDeviceReadWritePRM_v1
(nvmlDevice_t device, nvmlPRMTLV_v1_t *buffer)
```

Parameters**device**

Identifier of target GPU device

buffer

Structure holding the input data in TLV format as well as the PRM register contents in TLV format (in the case of a successful read operation). Note: the input data and any returned data shall be in network byte order.

Returns

- ▶ NVML_SUCCESS on success
- ▶ NVML_ERROR_INVALID_ARGUMENT if `device` or `buffer` are invalid
- ▶ NVML_ERROR_NO_PERMISSION if user does not have permission to perform this operation
- ▶ NVML_ERROR_NOT_SUPPORTED if this feature is not supported by the device
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH if the version specified in `buffer` is not supported

Description

Read or write a GPU PRM register. The input is assumed to be in TLV format in network byte order.

For Blackwell or newer fully supported devices.

Supported on Linux only.

5.29. Multi Instance GPU Management

This chapter describes NVML operations that are associated with Multi Instance GPU management.

```

struct nvmlGpuInstanceProfileInfo_t
struct nvmlGpuInstanceProfileInfo_v2_t
struct nvmlGpuInstanceProfileInfo_v3_t
struct nvmlComputeInstanceProfileInfo_t
struct nvmlComputeInstanceProfileInfo_v2_t
struct nvmlComputeInstanceProfileInfo_v3_t

nvmlReturn_t nvmlDeviceSetMigMode (nvmlDevice_t
device, unsigned int mode, nvmlReturn_t
*activationStatus)

```

Parameters**device**

The identifier of the target device

mode

The mode to be set, **NVML_DEVICE_MIG_DISABLE** or
NVML_DEVICE_MIG_ENABLE

activationStatus

The activationStatus status

Returns

- ▶ **NVML_SUCCESS** Upon success
- ▶ **NVML_ERROR_UNINITIALIZED** If library has not been successfully initialized
- ▶ **NVML_ERROR_INVALID_ARGUMENT** If device, mode or activationStatus are invalid
- ▶ **NVML_ERROR_NO_PERMISSION** If user doesn't have permission to perform the operation
- ▶ **NVML_ERROR_NOT_SUPPORTED** If device doesn't support MIG mode

Description

Set MIG mode for the device.

For Ampere or newer fully supported devices. Requires root user.

This mode determines whether a GPU instance can be created.

This API may unbind or reset the device to activate the requested mode. Thus, the attributes associated with the device, such as minor number, might change. The caller of this API is expected to query such attributes again.

On certain platforms like pass-through virtualization, where reset functionality may not be exposed directly, VM reboot is required. activationStatus would return **NVML_ERROR_RESET_REQUIRED** for such cases.

activationStatus would return the appropriate error code upon unsuccessful activation. For example, if device unbind fails because the device isn't idle, **NVML_ERROR_IN_USE** would be returned. The caller of this API is expected to idle the device and retry setting the mode.

On Windows, only disabling MIG mode is supported. activationStatus would return **NVML_ERROR_NOT_SUPPORTED** as GPU reset is not supported on Windows through this API.

nvmlReturn_t nvmlDeviceGetMigMode (nvmlDevice_t device, unsigned int *currentMode, unsigned int *pendingMode)

Parameters

device

The identifier of the target device

currentMode

Returns the current mode, **NVML_DEVICE_MIG_DISABLE** or **NVML_DEVICE_MIG_ENABLE**

pendingMode

Returns the pending mode, **NVML_DEVICE_MIG_DISABLE** or **NVML_DEVICE_MIG_ENABLE**

Returns

- ▶ **NVML_SUCCESS** Upon success
- ▶ **NVML_ERROR_UNINITIALIZED** If library has not been successfully initialized
- ▶ **NVML_ERROR_INVALID_ARGUMENT** If device, currentMode or pendingMode are invalid
- ▶ **NVML_ERROR_NOT_SUPPORTED** If device doesn't support MIG mode
- ▶ **NVML_ERROR_UNKNOWN** on any unexpected error

Description

Get MIG mode for the device.

For Ampere or newer fully supported devices.

Changing MIG modes may require device unbind or reset. The "pending" MIG mode refers to the target mode following the next activation trigger.

```
nvmlReturn_t nvmlDeviceGetGpuInstanceProfileInfo
(nvmlDevice_t device, unsigned int profile,
nvmlGpuInstanceProfileInfo_t *info)
```

Parameters

device

The identifier of the target device

profile

One of the NVML_GPU_INSTANCE_PROFILE_*

info

Returns detailed profile information

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device, profile or info are invalid
- ▶ NVML_ERROR_NOT_SUPPORTED If device doesn't support MIG or profile isn't supported
- ▶ NVML_ERROR_NO_PERMISSION If user doesn't have permission to perform the operation

Description

Get GPU instance profile information

Information provided by this API is immutable throughout the lifetime of a MIG mode.

This API can be used to enumerate all MIG profiles supported by NVML in a forward compatible way by invoking it on profile values starting from 0, until the API returns NVML_ERROR_INVALID_ARGUMENT.

For Ampere or newer fully supported devices. Supported on Linux only.

`nvmlReturn_t nvmlDeviceGetGpuInstanceProfileInfoV (nvmlDevice_t device, unsigned int profile, nvmlGpuInstanceStateProfileInfo_v2_t *info)`

Parameters

`device`

The identifier of the target device

`profile`

One of the NVML_GPU_INSTANCE_PROFILE_*

`info`

Returns detailed profile information

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device, profile, info, or info->version are invalid
- ▶ NVML_ERROR_NOT_SUPPORTED If device doesn't have MIG mode enabled or profile isn't supported
- ▶ NVML_ERROR_NO_PERMISSION If user doesn't have permission to perform the operation

Description

Versioned wrapper around `nvmlDeviceGetGpuInstanceStateProfileInfo` that accepts a versioned `nvmlGpuInstanceStateProfileInfo_v2_t` or later output structure.

The caller must set the `nvmlGpuInstanceStateProfileInfo_v2_t::version` field to the appropriate version prior to calling this function. For example:

```
nvmlGpuInstanceStateProfileInfo_v2_t profileInfo =
    { .version = nvmlGpuInstanceStateProfileInfo_v2 };
nvmlReturn_t result
= nvmlDeviceGetGpuInstanceStateProfileInfoV(device,
    profile,
    &profileInfo);
```

For Ampere or newer fully supported devices. Supported on Linux only.

`nvmlReturn_t nvmlDeviceGetGpuInstanceStateProfileInfoByIdV`

**(nvmlDevice_t device, unsigned int profileId,
nvmlGpuInstanceStateProfileInfo_v2_t *info)**

Parameters

device

The identifier of the target device

profileId

One of the profile IDs.

info

Returns detailed profile information

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device, profileId, info, or info->version are invalid
- ▶ NVML_ERROR_NOT_SUPPORTED If device doesn't have MIG mode enabled or profile isn't supported
- ▶ NVML_ERROR_NO_PERMISSION If user doesn't have permission to perform the operation

Description

GPU instance profile query function that accepts profile ID, instead of profile name. It accepts a versioned `nvmlGpuInstanceStateProfileInfo_v2_t` or later output structure.

The caller must set the `nvmlGpuInstanceStateProfileInfo_v2_t::version` field to the appropriate version prior to calling this function. For example:

```
nvmlGpuInstanceStateProfileInfo_v2_t profileInfo =
    { .version = nvmlGpuInstanceStateProfileInfo_v2 };
nvmlReturn_t result
= nvmlDeviceGetGpuInstanceStateProfileInfoV(device,
profile,
&profileInfo);
```

For Ampere or newer fully supported devices. Supported on Linux only.

nvmlReturn_t

nvmlDeviceGetGpuInstanceStatePossiblePlacements_v2

(nvmlDevice_t device, unsigned int profileId,

`nvmlGpuInstancePlacement_t *placements, unsigned int *count)`

Parameters

`device`

The identifier of the target device

`profileId`

The GPU instance profile ID. See [nvmlDeviceGetGpuInstanceProfileInfo](#)

`placements`

Returns placements allowed for the profile. Can be NULL to discover number of allowed placements for this profile. If non-NULL must be large enough to accommodate the placements supported by the profile.

`count`

Returns number of allowed placements for the profile.

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device, profileId or count are invalid
- ▶ NVML_ERROR_NOT_SUPPORTED If device doesn't support MIG or profileId isn't supported
- ▶ NVML_ERROR_NO_PERMISSION If user doesn't have permission to perform the operation

Description

Get GPU instance placements.

A placement represents the location of a GPU instance within a device. This API only returns all the possible placements for the given profile regardless of whether MIG is enabled or not. A created GPU instance occupies memory slices described by its placement. Creation of new GPU instance will fail if there is overlap with the already occupied memory slices.

For Ampere or newer fully supported devices. Supported on Linux only. Requires privileged user.

`nvmlReturn_t`

`nvmlDeviceGetGpuInstanceRemainingCapacity`

(nvmlDevice_t device, unsigned int profileId, unsigned int *count)

Parameters

device

The identifier of the target device

profileId

The GPU instance profile ID. See [nvmlDeviceGetGpuInstanceIdProfileInfo](#)

count

Returns remaining instance count for the profile ID

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device, profileId or count are invalid
- ▶ NVML_ERROR_NOT_SUPPORTED If device doesn't have MIG mode enabled or profileId isn't supported
- ▶ NVML_ERROR_NO_PERMISSION If user doesn't have permission to perform the operation

Description

Get GPU instance profile capacity.

For Ampere or newer fully supported devices. Supported on Linux only. Requires privileged user.

nvmlReturn_t nvmlDeviceCreateGpuInstance (nvmlDevice_t device, unsigned int profileId, nvmlGpuInstance_t *gpuInstance)

Parameters

device

The identifier of the target device

profileId

The GPU instance profile ID. See [nvmlDeviceGetGpuInstanceIdProfileInfo](#)

gpuInstance

Returns the GPU instance handle

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device, profile, profileId or gpuInstance are invalid
- ▶ NVML_ERROR_NOT_SUPPORTED If device doesn't have MIG mode enabled or in vGPU guest
- ▶ NVML_ERROR_NO_PERMISSION If user doesn't have permission to perform the operation
- ▶ NVML_ERROR_INSUFFICIENT_RESOURCES If the requested GPU instance could not be created

Description

Create GPU instance.

For Ampere or newer fully supported devices. Supported on Linux only. Requires privileged user.

If the parent device is unbound, reset or the GPU instance is destroyed explicitly, the GPU instance handle would become invalid. The GPU instance must be recreated to acquire a valid handle.

`nvmlReturn_t`**`nvmlDeviceCreateGpuInstanceWithPlacement`**

```
(nvmlDevice_t device, unsigned int profileId,  

const nvmlGpuInstancePlacement_t *placement,  

nvmlGpuInstance_t *gpuInstance)
```

Parameters**device**

The identifier of the target device

profileId

The GPU instance profile ID. See `nvmlDeviceGetGpuInstanceProfileInfo`

placement

The requested placement. See `nvmlDeviceGetGpuInstancePossiblePlacements_v2`

gpuInstance

Returns the GPU instance handle

Returns

- ▶ NVML_SUCCESS Upon success

- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device, profile, profileId, placement or gpuInstance are invalid
- ▶ NVML_ERROR_NOT_SUPPORTED If device doesn't have MIG mode enabled or in vGPU guest
- ▶ NVML_ERROR_NO_PERMISSION If user doesn't have permission to perform the operation
- ▶ NVML_ERROR_INSUFFICIENT_RESOURCES If the requested GPU instance could not be created

Description

Create GPU instance with the specified placement.

For Ampere or newer fully supported devices. Supported on Linux only. Requires privileged user.

If the parent device is unbound, reset or the GPU instance is destroyed explicitly, the GPU instance handle would become invalid. The GPU instance must be recreated to acquire a valid handle.

nvmlReturn_t nvmlGpuInstanceDestroy (nvmlGpuInstance_t gpuInstance)

Parameters

gpuInstance

The GPU instance handle

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If gpuInstance is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED If device doesn't have MIG mode enabled or in vGPU guest
- ▶ NVML_ERROR_NO_PERMISSION If user doesn't have permission to perform the operation
- ▶ NVML_ERROR_IN_USE If the GPU instance is in use. This error would be returned if processes (e.g. CUDA application) or compute instances are active on the GPU instance.

Description

Destroy GPU instance.

For Ampere or newer fully supported devices. Supported on Linux only. Requires privileged user.

nvmlReturn_t nvmlDeviceGetGpuInstances (nvmlDevice_t device, unsigned int profileId, nvmlGpuInstance_t *gpuInstances, unsigned int *count)

Parameters

device

The identifier of the target device

profileId

The GPU instance profile ID. See [nvmlDeviceGetGpuInstanceProfileInfo](#)

gpuInstances

Returns pre-existing GPU instances, the buffer must be large enough to accommodate the instances supported by the profile. See [nvmlDeviceGetGpuInstanceProfileInfo](#)

count

The count of returned GPU instances

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device, profileId, gpuInstances or count are invalid
- ▶ NVML_ERROR_NOT_SUPPORTED If device doesn't have MIG mode enabled
- ▶ NVML_ERROR_NO_PERMISSION If user doesn't have permission to perform the operation

Description

Get GPU instances for given profile ID.

For Ampere or newer fully supported devices. Supported on Linux only. Requires privileged user.

```
nvmlReturn_t nvmlDeviceGetGpuInstanceById  
(nvmlDevice_t device, unsigned int id,  
nvmlGpuInstance_t *gpuInstance)
```

Parameters

device

The identifier of the target device

id

The GPU instance ID

gpuInstance

Returns GPU instance

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device, id or gpuInstance are invalid
- ▶ NVML_ERROR_NOT_SUPPORTED If device doesn't have MIG mode enabled
- ▶ NVML_ERROR_NO_PERMISSION If user doesn't have permission to perform the operation
- ▶ NVML_ERROR_NOT_FOUND If the GPU instance is not found.

Description

Get GPU instances for given instance ID.

For Ampere or newer fully supported devices. Supported on Linux only. Requires privileged user.

```
nvmlReturn_t nvmlGpuInstanceGetInfo  
(nvmlGpuInstance_t gpuInstance,  
nvmlGpuInstanceInfo_t *info)
```

Parameters

gpuInstance

The GPU instance handle

info

Return GPU instance information

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If gpuInstance or info are invalid
- ▶ NVML_ERROR_NO_PERMISSION If user doesn't have permission to perform the operation

Description

Get GPU instance information.

For Ampere or newer fully supported devices. Supported on Linux only.

`nvmlReturn_t`**`nvmlGpuInstanceGetComputeInstanceIdProfileInfo`**
`(nvmlGpuInstance_t gpuInstance, unsigned int profile, unsigned int engProfile, nvmlComputeInstanceIdProfileInfo_t *info)`**Parameters****`gpuInstance`**

The identifier of the target GPU instance

`profile`

One of the NVML_COMPUTE_INSTANCE_PROFILE_*

`engProfile`

One of the NVML_COMPUTE_INSTANCE_ENGINE_PROFILE_*

`info`

Returns detailed profile information

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If gpuInstance, profile, engProfile or info are invalid
- ▶ NVML_ERROR_NOT_SUPPORTED If profile isn't supported
- ▶ NVML_ERROR_NO_PERMISSION If user doesn't have permission to perform the operation

Description

Get compute instance profile information.

Information provided by this API is immutable throughout the lifetime of a MIG mode.

This API can be used to enumerate all MIG profiles supported by NVML in a forward compatible way by invoking it on profile values starting from 0, until the API returns `NVML_ERROR_INVALID_ARGUMENT`.

For Ampere or newer fully supported devices. Supported on Linux only.

`nvmlReturn_t`

```
nvmlGpuInstanceGetComputeInstanceIdProfileInfoV
(nvmlGpuInstance_t gpuInstance, unsigned
int profile, unsigned int engProfile,
nvmlComputeInstanceIdProfileInfo_v2_t *info)
```

Parameters

`gpuInstance`

The identifier of the target GPU instance

`profile`

One of the `NVML_COMPUTE_INSTANCE_PROFILE_*`

`engProfile`

One of the `NVML_COMPUTE_INSTANCE_ENGINE_PROFILE_*`

`info`

Returns detailed profile information

Returns

- ▶ `NVML_SUCCESS` Upon success
- ▶ `NVML_ERROR_UNINITIALIZED` If library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` If `gpuInstance`, `profile`, `engProfile`, `info`, or `info->version` are invalid
- ▶ `NVML_ERROR_NOT_SUPPORTED` If profile isn't supported
- ▶ `NVML_ERROR_NO_PERMISSION` If user doesn't have permission to perform the operation

Description

Versioned wrapper around `nvmlGpuInstanceGetComputeInstanceIdProfileInfo` that accepts a versioned `nvmlComputeInstanceIdProfileInfo_v2_t` or later output structure.

The caller must set the `nvmlGpuInstanceProfileInfo_v2_t::version` field to the appropriate version prior to calling this function. For example:

```
nvmlComputeInstanceProfileInfo_v2_t profileInfo =
    { .version = nvmlComputeInstanceProfileInfo_v2 };
nvmlReturn_t result
= nvmlGpuInstanceGetComputeInstanceProfileInfoV(gpuInstance,
    profile,
    engProfile,
    &profileInfo);
```

For Ampere or newer fully supported devices. Supported on Linux only.

`nvmlReturn_t`

`nvmlGpuInstanceGetComputeInstanceRemainingCapacity` (`nvmlGpuInstance_t gpuInstance`, `unsigned int profileId`, `unsigned int *count`)

Parameters

`gpuInstance`

The identifier of the target GPU instance

`profileId`

The compute instance profile ID. See

`nvmlGpuInstanceGetComputeInstanceProfileInfo`

`count`

Returns remaining instance count for the profile ID

Returns

- ▶ `NVML_SUCCESS` Upon success
- ▶ `NVML_ERROR_UNINITIALIZED` If library has not been successfully initialized
- ▶ `NVML_ERROR_INVALID_ARGUMENT` If `gpuInstance`, `profileId` or `availableCount` are invalid
- ▶ `NVML_ERROR_NOT_SUPPORTED` If `profileId` isn't supported
- ▶ `NVML_ERROR_NO_PERMISSION` If user doesn't have permission to perform the operation

Description

Get compute instance profile capacity.

For Ampere or newer fully supported devices. Supported on Linux only. Requires privileged user.

nvmlReturn_t
nvmlGpuInstanceGetComputeInstancePossiblePlacements
 (nvmlGpuInstance_t gpuInstance, unsigned int profileId,
 nvmlComputeInstancePlacement_t *placements,
 unsigned int *count)

Parameters

gpuInstance

The identifier of the target GPU instance

profileId

The compute instance profile ID. See

[nvmlGpuInstanceGetComputeInstanceProfileInfo](#)

placements

Returns placements allowed for the profile. Can be NULL to discover number of allowed placements for this profile. If non-NULL must be large enough to accommodate the placements supported by the profile.

count

Returns number of allowed placements for the profile.

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If gpuInstance, profileId or count are invalid
- ▶ NVML_ERROR_NOT_SUPPORTED If device doesn't have MIG mode enabled or profileId isn't supported
- ▶ NVML_ERROR_NO_PERMISSION If user doesn't have permission to perform the operation

Description

Get compute instance placements.

For Ampere or newer fully supported devices. Supported on Linux only. Requires privileged user.

A placement represents the location of a compute instance within a GPU instance. This API only returns all the possible placements for the given profile. A created compute instance occupies compute slices described by its placement. Creation of new compute instance will fail if there is overlap with the already occupied compute slices.

`nvmlReturn_t nvmlGpuInstanceCreateComputeInstance (nvmlGpuInstance_t gpuInstance, unsigned int profileId, nvmlComputeInstance_t *computeInstance)`

Parameters

gpuInstance

The identifier of the target GPU instance

profileId

The compute instance profile ID. See

[nvmlGpuInstanceGetComputeInstanceProfileInfo](#)

computeInstance

Returns the compute instance handle

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If gpuInstance, profile, profileId or computeInstance are invalid
- ▶ NVML_ERROR_NOT_SUPPORTED If profileId isn't supported
- ▶ NVML_ERROR_NO_PERMISSION If user doesn't have permission to perform the operation
- ▶ NVML_ERROR_INSUFFICIENT_RESOURCES If the requested compute instance could not be created

Description

Create compute instance.

For Ampere or newer fully supported devices. Supported on Linux only. Requires privileged user.

If the parent device is unbound, reset or the parent GPU instance is destroyed or the compute instance is destroyed explicitly, the compute instance handle would become invalid. The compute instance must be recreated to acquire a valid handle.

`nvmlReturn_t`

`nvmlGpuInstanceCreateComputeInstanceWithPlacement (nvmlGpuInstance_t gpuInstance, unsigned int profileId,`

```
const nvmlComputeInstancePlacement_t *placement,
nvmlComputeInstance_t *computeInstance)
```

Parameters

gpuInstance

The identifier of the target GPU instance

profileId

The compute instance profile ID. See

[nvmlGpuInstanceGetComputeInstanceProfileInfo](#)

placement

The requested placement. See

[nvmlGpuInstanceGetComputeInstancePossiblePlacements](#)

computeInstance

Returns the compute instance handle

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If gpuInstance, profile, profileId or computeInstance are invalid
- ▶ NVML_ERROR_NOT_SUPPORTED If profileId isn't supported
- ▶ NVML_ERROR_NO_PERMISSION If user doesn't have permission to perform the operation
- ▶ NVML_ERROR_INSUFFICIENT_RESOURCES If the requested compute instance could not be created

Description

Create compute instance with the specified placement.

For Ampere or newer fully supported devices. Supported on Linux only. Requires privileged user.

If the parent device is unbound, reset or the parent GPU instance is destroyed or the compute instance is destroyed explicitly, the compute instance handle would become invalid. The compute instance must be recreated to acquire a valid handle.

nvmlReturn_t nvmlComputeInstanceDestroy (nvmlComputeInstance_t computeInstance)

Parameters

computeInstance

The compute instance handle

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If computeInstance is invalid
- ▶ NVML_ERROR_NO_PERMISSION If user doesn't have permission to perform the operation
- ▶ NVML_ERROR_IN_USE If the compute instance is in use. This error would be returned if processes (e.g. CUDA application) are active on the compute instance.

Description

Destroy compute instance.

For Ampere or newer fully supported devices. Supported on Linux only. Requires privileged user.

nvmlReturn_t nvmlGpuInstanceGetComputeInstances (nvmlGpuInstance_t gpuInstance, unsigned int profileId, nvmlComputeInstance_t *computeInstances, unsigned int *count)

Parameters

gpuInstance

The identifier of the target GPU instance

profileId

The compute instance profile ID. See

[nvmlGpuInstanceGetComputeInstanceProfileInfo](#)

computeInstances

Returns pre-existing compute instances, the buffer must be large enough to accommodate the instances supported by the profile. See [nvmlGpuInstanceGetComputeInstanceProfileInfo](#)

count

The count of returned compute instances

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If gpuInstance, profileId, computeInstances or count are invalid
- ▶ NVML_ERROR_NOT_SUPPORTED If profileId isn't supported
- ▶ NVML_ERROR_NO_PERMISSION If user doesn't have permission to perform the operation

Description

Get compute instances for given profile ID.

For Ampere or newer fully supported devices. Supported on Linux only. Requires privileged user.

**nvmlReturn_t nvmlGpuInstanceGetComputeInstanceById
(nvmlGpuInstance_t gpuInstance, unsigned int id,
nvmlComputeInstance_t *computeInstance)**

Parameters**gpuInstance**

The identifier of the target GPU instance

id

The compute instance ID

computeInstance

Returns compute instance

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device, ID or computeInstance are invalid
- ▶ NVML_ERROR_NOT_SUPPORTED If device doesn't have MIG mode enabled
- ▶ NVML_ERROR_NO_PERMISSION If user doesn't have permission to perform the operation
- ▶ NVML_ERROR_NOT_FOUND If the compute instance is not found.

Description

Get compute instance for given instance ID.

For Ampere or newer fully supported devices. Supported on Linux only. Requires privileged user.

**nvmlReturn_t nvmlComputeGetInstanceGetInfo_v2
(nvmlComputeInstance_t computeInstance,
nvmlComputeInstanceStateInfo_t *info)**

Parameters**computeInstance**

The compute instance handle

info

Return compute instance information

Returns

- ▶ NVML_SUCCESS Upon success
- ▶ NVML_ERROR_UNINITIALIZED If library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If computeInstance or info are invalid
- ▶ NVML_ERROR_NO_PERMISSION If user doesn't have permission to perform the operation

Description

Get compute instance information.

For Ampere or newer fully supported devices. Supported on Linux only.

**nvmlReturn_t nvmlDeviceIsMigDeviceHandle
(nvmlDevice_t device, unsigned int *isMigDevice)**

Parameters**device**

NVML handle to test

isMigDevice

True when handle refers to a MIG device

Returns

- ▶ NVML_SUCCESS if device status was successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device handle or isMigDevice reference is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if this check is not supported by the device
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Test if the given handle refers to a MIG device.

A MIG device handle is an NVML abstraction which maps to a MIG compute instance. These overloaded references can be used (with some restrictions) interchangeably with a GPU device handle to execute queries at a per-compute instance granularity.

For Ampere or newer fully supported devices. Supported on Linux only.

`nvmlReturn_t nvmlDeviceGetGpuInstanceId (nvmlDevice_t device, unsigned int *id)`

Parameters**device**

Target MIG device handle

id

GPU instance ID

Returns

- ▶ NVML_SUCCESS if instance ID was successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device or id reference is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Get GPU instance ID for the given MIG device handle.

GPU instance IDs are unique per device and remain valid until the GPU instance is destroyed.

For Ampere or newer fully supported devices. Supported on Linux only.

`nvmlReturn_t nvmlDeviceGetComputeInstanceId (nvmlDevice_t device, unsigned int *id)`

Parameters

device

Target MIG device handle

id

Compute instance ID

Returns

- ▶ NVML_SUCCESS if instance ID was successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device or id reference is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Get compute instance ID for the given MIG device handle.

Compute instance IDs are unique per GPU instance and remain valid until the compute instance is destroyed.

For Ampere or newer fully supported devices. Supported on Linux only.

`nvmlReturn_t nvmlDeviceGetMaxMigDeviceCount (nvmlDevice_t device, unsigned int *count)`

Parameters

device

Target device handle

count

Count of MIG devices

Returns

- ▶ NVML_SUCCESS if count was successfully retrieved
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device or count reference is invalid
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Get the maximum number of MIG devices that can exist under a given parent NVML device.

Returns zero if MIG is not supported or enabled.

For Ampere or newer fully supported devices. Supported on Linux only.

**`nvmlReturn_t nvmlDeviceGetMigDeviceHandleByIndex
(nvmlDevice_t device, unsigned int index, nvmlDevice_t
*migDevice)`**

Parameters

device

Reference to the parent GPU device handle

index

Index of the MIG device

migDevice

Reference to the MIG device handle

Returns

- ▶ NVML_SUCCESS if migDevice handle was successfully created
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device, index or migDevice reference is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device
- ▶ NVML_ERROR_NOT_FOUND if no valid MIG device was found at index
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Get MIG device handle for the given index under its parent NVML device.

If the compute instance is destroyed either explicitly or by destroying, resetting or unbinding the parent GPU instance or the GPU device itself the MIG device handle would remain invalid and must be requested again using this API. Handles may be reused and their properties can change in the process.

For Ampere or newer fully supported devices. Supported on Linux only.

```
nvmlReturn_t  
nvmlDeviceGetDeviceHandleFromMigDeviceHandle  
(nvmlDevice_t migDevice, nvmlDevice_t *device)
```

Parameters

migDevice

MIG device handle

device

Device handle

Returns

- ▶ NVML_SUCCESS if device handle was successfully created
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if migDevice or device is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device
- ▶ NVML_ERROR_UNKNOWN on any unexpected error

Description

Get parent device handle from a MIG device handle.

For Ampere or newer fully supported devices. Supported on Linux only.

```
#define NVML_DEVICE_MIG_DISABLE 0x0
```

Disable Multi Instance GPU mode.

```
#define NVML_DEVICE_MIG_ENABLE 0x1
```

Enable Multi Instance GPU mode.

```
#define NVML_GPU_INSTANCE_PROFILE_1_SLICE 0x0
```

GPU instance profiles.

These macros should be passed to `nvmlDeviceGetGpuInstanceProfileInfo` to retrieve the detailed information about a GPU instance such as profile ID, engine counts.

```
#define NVML_GPU_INSTANCE_PROFILE_CAPS_P2P 0x1
```

MIG GPU instance profile capability.

Bit field values representing MIG profile capabilities
`nvmlGpuInstanceProfileInfo_v3_t::capabilities`

#define NVML_GPU_INSTANCE_PROFILE_CAPS_P2P 0x1
Deprecated, do not use.

#define NVML_COMPUTE_INSTANCE_PROFILE_CAPS_GFX 0x1

MIG compute instance profile capability.

Bit field values representing MIG profile capabilities
`nvmlComputeInstanceProfileInfo_v3_t::capabilities`

#define nvmlGpuInstanceStateProfileInfo_v2
NVML_STRUCT_VERSION(GpuInstanceStateProfileInfo, 2)

Version identifier value for `nvmlGpuInstanceStateProfileInfo_v2_t::version`.

#define nvmlGpuInstanceStateProfileInfo_v3
NVML_STRUCT_VERSION(GpuInstanceStateProfileInfo, 3)

Version identifier value for `nvmlGpuInstanceStateProfileInfo_v3_t::version`.

#define NVML_COMPUTE_INSTANCE_PROFILE_1_SLICE
0x0

Compute instance profiles.

These macros should be passed to `nvmlGpuInstanceGetComputeInstanceStateProfileInfo` to retrieve the detailed information about a compute instance such as profile ID, engine counts

#define
NVML_COMPUTE_INSTANCE_ENGINE_PROFILE_SHARED
0x0

All the engines except multiprocessors would be shared.

#define nvmlComputeInstanceStateProfileInfo_v2
NVML_STRUCT_VERSION(ComputeInstanceStateProfileInfo, 2)

Version identifier value for `nvmlComputeInstanceStateProfileInfo_v2_t::version`.

```
#define nvmlComputeInstanceStateProfileInfo_v3
NVML_STRUCT_VERSION(ComputeInstanceStateProfileInfo, 3)
```

Version identifier value for `nvmlComputeInstanceStateProfileInfo_v3_t::version`.

5.30. NVML GPM

- ▶ For NVIDIA vGPU Software products
- ▶ (A) GPM is supported only on MIG-backed vGPU profiles that are allocated all of the instance's frame buffer
- ▶ (B) No GPM support on Windows

GPM Enums

GPM Structs

GPM Functions

5.30.1. GPM Enums

NVML GPM

`enum nvmlGpmMetricId_t`

GPM Metric Identifiers

Values

NVML_GPM_METRIC_GRAPHICS_UTIL = 1

Percentage of time any compute/graphics app was active on the GPU. 0.0 - 100.0.

NVML_GPM_METRIC_SM_UTIL = 2

Percentage of SMs that were busy. 0.0 - 100.0.

NVML_GPM_METRIC_SM_OCCUPANCY = 3

Percentage of warps that were active vs theoretical maximum. 0.0 - 100.0.

NVML_GPM_METRIC_INTEGER_UTIL = 4

Percentage of time the GPU's SMs were doing integer operations. 0.0 - 100.0.

NVML_GPM_METRIC_ANY_TENSOR_UTIL = 5

Percentage of time the GPU's SMs were doing ANY tensor operations. 0.0 - 100.0.

NVML_GPM_METRIC_DFMA_TENSOR_UTIL = 6
 Percentage of time the GPU's SMs were doing DFMA tensor operations. 0.0 - 100.0.

NVML_GPM_METRIC_HMMA_TENSOR_UTIL = 7
 Percentage of time the GPU's SMs were doing HMMA tensor operations. 0.0 - 100.0.

NVML_GPM_METRIC_IMMA_TENSOR_UTIL = 9
 Percentage of time the GPU's SMs were doing IMMA tensor operations. 0.0 - 100.0.

NVML_GPM_METRIC_DRAM_BW_UTIL = 10
 Percentage of DRAM bw used vs theoretical maximum. 0.0 - 100.0 */.

NVML_GPM_METRIC_FP64_UTIL = 11
 Percentage of time the GPU's SMs were doing non-tensor FP64 math. 0.0 - 100.0.

NVML_GPM_METRIC_FP32_UTIL = 12
 Percentage of time the GPU's SMs were doing non-tensor FP32 math. 0.0 - 100.0.

NVML_GPM_METRIC_FP16_UTIL = 13
 Percentage of time the GPU's SMs were doing non-tensor FP16 math. 0.0 - 100.0.

NVML_GPM_METRIC_PCIE_TX_PER_SEC = 20
 PCIe traffic from this GPU in MiB/sec.

NVML_GPM_METRIC_PCIE_RX_PER_SEC = 21
 PCIe traffic to this GPU in MiB/sec.

NVML_GPM_METRIC_NVDEC_0_UTIL = 30
 Percent utilization of NVDEC 0. 0.0 - 100.0.

NVML_GPM_METRIC_NVDEC_1_UTIL = 31
 Percent utilization of NVDEC 1. 0.0 - 100.0.

NVML_GPM_METRIC_NVDEC_2_UTIL = 32
 Percent utilization of NVDEC 2. 0.0 - 100.0.

NVML_GPM_METRIC_MAX = 210

```

Maximum value above +1. Note that changing this should also change NVML_GPM_METRICS_GET_VERSION due to struct size change.

5.30.2. GPM Structs

NVML GPM

```

struct nvmlGpmMetric_t
struct nvmlGpmMetricsGet_t
struct nvmlGpmSupport_t
typedef struct nvmlGpmSample_st *nvmlGpmSample_t

```

Handle to an allocated GPM sample allocated with [nvmlGpmSampleAlloc\(\)](#). Free this with [nvmlGpmSampleFree\(\)](#).

5.30.3. GPM Functions

NVML GPM

nvmlReturn_t nvmlGpmMetricsGet (nvmlGpmMetricsGet_t *metricsGet)

Parameters

metricsGet

IN/OUT: populated **nvmlGpmMetricsGet_t** struct

Returns

- ▶ NVML_SUCCESS on success
- ▶ Nonzero NVML_ERROR_? enum on error

Description

Calculate GPM metrics from two samples.

For Hopper or newer fully supported devices.

To retrieve metrics, the user must first allocate the two sample buffers at metricsGet->sample1 and metricsGet->sample2 by calling [nvmlGpmSampleAlloc\(\)](#). Next, the user should fill in the ID of each metric in metricsGet->metrics[i].metricId and specify the total number of metrics to retrieve in metricsGet->numMetrics. The version should be set to NVML_GPM_METRICS_GET_VERSION in metricsGet->version. The user then calls the [nvmlGpmSampleGet\(\)](#) API twice to obtain 2 samples of counters.

The interval between these two [nvmlGpmSampleGet\(\)](#) calls should be greater than 100ms due to the internal sample refresh rate. Finally, the user calls

nvmlGpmMetricsGet to retrieve the metrics, which will be stored at metricsGet->metrics

nvmlReturn_t nvmlGpmSampleFree (nvmlGpmSample_t gpmSample)

Parameters

gpmSample

Sample to free

Returns

- ▶ NVML_SUCCESS on success
- ▶ NVML_ERROR_INVALID_ARGUMENT if an invalid pointer is provided

Description

Free an allocated sample buffer that was allocated with [nvmlGpmSampleAlloc\(\)](#)

For Hopper or newer fully supported devices.

nvmlReturn_t nvmlGpmSampleAlloc (nvmlGpmSample_t *gpmSample)

Parameters

gpmSample

Where the allocated sample will be stored

Returns

- ▶ NVML_SUCCESS on success
- ▶ NVML_ERROR_INVALID_ARGUMENT if an invalid pointer is provided
- ▶ NVML_ERROR_MEMORY if system memory is insufficient

Description

Allocate a sample buffer to be used with NVML GPM . You will need to allocate at least two of these buffers to use with the NVML GPM feature

For Hopper or newer fully supported devices.

**nvmlReturn_t nvmlGpmSampleGet (nvmlDevice_t device,
nvmlGpmSample_t gpmSample)**

Parameters

device

Device to get samples for

gpmSample

Buffer to read samples into

Returns

- ▶ NVML_SUCCESS on success
- ▶ Nonzero NVML_ERROR_? enum on error

Description

Read a sample of GPM metrics into the provided gpmSample buffer. After two samples are gathered, you can call nvmlGpmMetricGet on those samples to retrieve metrics

For Hopper or newer fully supported devices.

The interval between two `nvmlGpmSampleGet()` calls should be greater than 100ms due to the internal sample refresh rate.

**nvmlReturn_t nvmlGpmMigSampleGet (nvmlDevice_t device,
unsigned int gpuInstanceId, nvmlGpmSample_t gpmSample)**

Parameters

device

Device to get samples for

gpuInstanceId

MIG GPU Instance ID

gpmSample

Buffer to read samples into

Returns

- ▶ NVML_SUCCESS on success
- ▶ Nonzero NVML_ERROR_? enum on error

Description

Read a sample of GPM metrics into the provided gpmSample buffer for a MIG GPU Instance.

After two samples are gathered, you can call nvmlGpmMetricGet on those samples to retrieve metrics

For Hopper or newer fully supported devices.

The interval between two `nvmlGpmMigSampleGet()` calls should be greater than 100ms due to the internal sample refresh rate.

`nvmlReturn_t nvmlGpmQueryDeviceSupport (nvmlDevice_t device, nvmlGpmSupport_t *gpmSupport)`

Parameters

device

NVML device to query for

gpmSupport

Structure to indicate GPM support `nvmlGpmSupport_t`. Indicates GPM support per system for the supplied device

Returns

- ▶ NVML_SUCCESS on success
- ▶ Nonzero NVML_ERROR_? enum if there is an error in processing the query

Description

Indicate whether the supplied device supports GPM

For Hopper or newer fully supported devices.

`nvmlReturn_t nvmlGpmQueryIfStreamingEnabled (nvmlDevice_t device, unsigned int *state)`

Parameters

device

The identifier of the target device

state

Returns GPM stream state NVML_FEATURE_DISABLED or NVML_FEATURE_ENABLED

Returns

- ▶ NVML_SUCCESS if current GPM stream state were successfully queried
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or state is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device

Description

Get GPM stream state.

For Hopper or newer fully supported devices. Supported on Linux, Windows TCC.

nvmlReturn_t nvmlGpmSetStreamingEnabled (nvmlDevice_t device, unsigned int state)

Parameters**device**

The identifier of the target device

state

GPM stream state, NVML_FEATURE_DISABLED or NVML_FEATURE_ENABLED

Returns

- ▶ NVML_SUCCESS if current GPM stream state is successfully set
- ▶ NVML_ERROR_UNINITIALIZED if the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid
- ▶ NVML_ERROR_NOT_SUPPORTED if this query is not supported by the device

Description

Set GPM stream state.

For Hopper or newer fully supported devices. Supported on Linux, Windows TCC.

5.31. Power Profile Information

```

struct nvmlWorkloadPowerProfileInfo_v1_t
struct nvmlWorkloadPowerProfileProfilesInfo_v1_t
struct nvmlWorkloadPowerProfileCurrentProfiles_v1_t
struct nvmlWorkloadPowerProfileRequestedProfiles_v1_t

nvmlReturn_t
nvmlDeviceWorkloadPowerProfileGetProfilesInfo
(nvmlDevice_t device,
nvmlWorkloadPowerProfileProfilesInfo_t *profilesInfo)

```

Parameters**device**

The identifier of the target device

profilesInfo

Reference to struct `nvmlWorkloadPowerProfileProfilesInfo_t`

Returns

- ▶ NVML_SUCCESS If the query is successful
- ▶ NVML_ERROR_INSUFFICIENT_SIZE If struct is fully allocated
- ▶ NVML_ERROR_UNINITIALIZED If the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device is invalid or pointer to struct is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED If the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST If the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the provided version is invalid/unsupported
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Get Performance Profiles Information

For Blackwell or newer fully supported devices. See `nvmlWorkloadPowerProfileProfilesInfo_v1_t` for more information on the struct. The mask `perfProfilesMask` is bitmask of all supported mode indices where the mode is

supported if the index is 1. Each supported mode will have a corresponding entry in the perfProfile array which will contain the profileId, the priority of this mode, where the lower the value, the higher the priority, and a conflictingMask, where each bit set in the mask corresponds to a different profile which cannot be used in conjunction with the given profile.

nvmlReturn_t

nvmlDeviceWorkloadPowerProfileGetCurrentProfiles

(nvmlDevice_t device,

nvmlWorkloadPowerProfileCurrentProfiles_t

***currentProfiles)**

Parameters

device

The identifier of the target device

currentProfiles

Reference to struct `nvmlWorkloadPowerProfileCurrentProfiles_v1_t`

Returns

- ▶ NVML_SUCCESS If the query is successful
- ▶ NVML_ERROR_UNINITIALIZED If the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device is invalid or the pointer to struct is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED If the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST If the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the provided version is invalid/unsupported
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Get Current Performance Profiles

For Blackwell or newer fully supported devices. See `nvmlWorkloadPowerProfileCurrentProfiles_v1_t` for more information on the struct. This API returns a stuct which contains the current perfProfilesMask, requestedProfilesMask and enforcedProfilesMask. Each bit set in each bitmasks indicates the profile is supported, currently requested or currently engaged, respectively.

```
nvmlReturn_t  
nvmlDeviceWorkloadPowerProfileSetRequestedProfiles  
(nvmlDevice_t device,  
nvmlWorkloadPowerProfileRequestedProfiles_t  
*requestedProfiles)
```

Parameters

device

The identifier of the target device

requestedProfiles

Reference to struct nvmlWorkloadPowerProfileRequestedProfiles_v1_t

Returns

- ▶ NVML_SUCCESS If the query is successful
- ▶ NVML_ERROR_UNINITIALIZED If the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device is invalid or pointer to struct is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED If the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST If the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the provided version is invalid/unsupported
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Set Requested Performance Profiles

For Blackwell or newer fully supported devices. See [nvmlWorkloadPowerProfileRequestedProfiles_v1_t](#) for more information on the struct. Request one or more performance profiles be activated using the input bitmask requestedProfilesMask, where each bit set corresponds to a supported bit from the perfProfilesMask. These profiles will be added to existing list of currently requested profiles. Requires root/admin permissions.

```
nvmlReturn_t  
nvmlDeviceWorkloadPowerProfileClearRequestedProfiles  
(nvmlDevice_t device,
```

nvmlWorkloadPowerProfileRequestedProfiles_t *requestedProfiles)

Parameters

device

The identifier of the target device

requestedProfiles

Reference to struct **nvmlWorkloadPowerProfileRequestedProfiles_v1_t**

Returns

- ▶ NVML_SUCCESS If the query is successful
- ▶ NVML_ERROR_UNINITIALIZED If the library has not been successfully initialized
- ▶ NVML_ERROR_INVALID_ARGUMENT If device is invalid or pointer to struct is NULL
- ▶ NVML_ERROR_NOT_SUPPORTED If the device does not support this feature
- ▶ NVML_ERROR_GPU_IS_LOST If the target GPU has fallen off the bus or is otherwise inaccessible
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH If the provided version is invalid/unsupported
- ▶ NVML_ERROR_UNKNOWN On any unexpected error

Description

Clear Requested Performance Profiles

For Blackwell or newer fully supported devices. See [nvmlWorkloadPowerProfileRequestedProfiles_v1_t](#) for more information on the struct. Clear one or more performance profiles by using the input bitmask requestedProfilesMask, where each bit set corresponds to a supported bit from the perfProfilesMask. These profiles will be removed from the existing list of currently requested profiles. Requires root/admin permissions.

5.32. Power Smoothing Information

```
struct nvmlPowerSmoothingProfile_v1_t  
struct nvmlPowerSmoothingState_v1_t  
  
nvmlReturn_t  
nvmlDevicePowerSmoothingActivatePresetProfile  
(nvmlDevice_t device, nvmlPowerSmoothingProfile_t  
*profile)
```

Parameters

device

The identifier of the target device

profile

Reference to [nvmlPowerSmoothingProfile_v1_t](#). Note that only profile->profileId is used and the rest of the structure is ignored.

Returns

- ▶ NVML_SUCCESS if the Desired Profile was successfully set
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or structure was NULL
- ▶ NVML_ERROR_NO_PERMISSION if user does not have permission to change the profile number
- ▶ NVML_ERROR_NOT_SUPPORTED if this feature is not supported by the device

Description

Activiate a specific preset profile for datacenter power smoothing. The API only sets the active preset profile based on the input profileId, and ignores the other parameters of the structure. Requires root/admin permissions.

For Blackwell or newer fully supported devices.

```
nvmlReturn_t  
nvmlDevicePowerSmoothingUpdatePresetProfileParam
```

(nvmlDevice_t device, nvmlPowerSmoothingProfile_t *profile)

Parameters

device

The identifier of the target device

profile

Reference to `nvmlPowerSmoothingProfile_v1_t` struct

Returns

- ▶ NVML_SUCCESS if the Active Profile was successfully set
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or profile parameter/value was invalid
- ▶ NVML_ERROR_NO_PERMISSION if user does not have permission to change any profile parameters
- ▶ NVML_ERROR_ARGUMENT_VERSION_MISMATCH if the structure version is not supported

Description

Update the value of a specific profile parameter contained within `nvmlPowerSmoothingProfile_v1_t`. Requires root/admin permissions.

For Blackwell or newer fully supported devices.

`NVML_POWER_SMOOTHING_PROFILE_PARAM_PERCENT_TMP_FLOOR` expects a value as a percentage from 0.00-100.00%
`NVML_POWER_SMOOTHING_PROFILE_PARAM_RAMP_UP_RATE` expects a value in W/s
`NVML_POWER_SMOOTHING_PROFILE_PARAM_RAMP_DOWN_RATE` expects a value in W/s
`NVML_POWER_SMOOTHING_PROFILE_PARAM_RAMP_DOWN_HYSTESIS` expects a value in ms

nvmlReturn_t nvmlDevicePowerSmoothingSetState (nvmlDevice_t device, nvmlPowerSmoothingState_t *state)

Parameters

device

The identifier of the target device

state

Reference to [nvmlPowerSmoothingState_v1_t](#)

Returns

- ▶ NVML_SUCCESS if the feature state was successfully set
- ▶ NVML_ERROR_INVALID_ARGUMENT if device is invalid or state is NULL
- ▶ NVML_ERROR_NO_PERMISSION if user does not have permission to change feature state
- ▶ NVML_ERROR_NOT_SUPPORTED if this feature is not supported by the device

Description

Enable or disable the Power Smoothing Feature. Requires root/admin permissions.

For Blackwell or newer fully supported devices.

See [nvmlEnableState_t](#) for details on allowed states

5.33. vGPU Enums, Constants, Structs

vGPU Enums

vGPU Constants

vGPU Structs

5.33.1. vGPU Enums

vGPU Enums, Constants, Structs

enum nvmlGpuVirtualizationMode_t

GPU virtualization mode types.

Values

NVML_GPU_VIRTUALIZATION_MODE_NONE = 0

Represents Bare Metal GPU.

NVML_GPU_VIRTUALIZATION_MODE_PASSTHROUGH = 1

Device is associated with GPU-Passthrough.

NVML_GPU_VIRTUALIZATION_MODE_VGPU = 2

Device is associated with vGPU inside virtual machine.

NVML_GPU_VIRTUALIZATION_MODE_HOST_VGPU = 3

Device is associated with VGX hypervisor in vGPU mode.

NVML_GPU_VIRTUALIZATION_MODE_HOST_VSGA = 4

Device is associated with VGX hypervisor in vSGA mode.

enum nvmlHostVgpuMode_t

Host vGPU modes

Values

NVML_HOST_VGPU_MODE_NON_SRIOV = 0

Non SR-IOV mode.

NVML_HOST_VGPU_MODE_SRIOV = 1

SR-IOV mode.

enum nvmlVgpuVmIdType_t

Types of VM identifiers

Values

NVML_VGPU_VM_ID_DOMAIN_ID = 0

VM ID represents DOMAIN ID.

NVML_VGPU_VM_ID_UUID = 1

VM ID represents UUID.

enum nvmlVgpuGuestInfoState_t

vGPU GUEST info state

Values

NVML_VGPU_INSTANCE_GUEST_INFO_STATE_UNINITIALIZED = 0

Guest-dependent fields uninitialized.

NVML_VGPU_INSTANCE_GUEST_INFO_STATE_INITIALIZED = 1

Guest-dependent fields initialized.

enum nvmlGridLicenseFeatureCode_t

vGPU software licensable features

Values

NVML_GRID_LICENSE_FEATURE_CODE_UNKNOWN = 0

Unknown.

NVML_GRID_LICENSE_FEATURE_CODE_VGPU = 1

Virtual GPU.

NVML_GRID_LICENSE_FEATURE_CODE_NVIDIA_RTX = 2

Nvidia RTX.

NVML_GRID_LICENSE_FEATURE_CODE_VWORKSTATION =

NVML_GRID_LICENSE_FEATURE_CODE_NVIDIA_RTX

Deprecated, do not use.

NVML_GRID_LICENSE_FEATURE_CODE_GAMING = 3

Gaming.

NVML_GRID_LICENSE_FEATURE_CODE_COMPUTE = 4

Compute.

enum nvmlVgpuCapability_t

vGPU queryable capabilities

Values

NVML_VGPU_CAP_NVLINK_P2P = 0

P2P over NVLink is supported.

NVML_VGPU_CAP_GPUDIRECT = 1

GPUDirect capability is supported.

NVML_VGPU_CAP_MULTI_VGPU_EXCLUSIVE = 2

vGPU profile cannot be mixed with other vGPU profiles in same VM

NVML_VGPU_CAP_EXCLUSIVE_TYPE = 3

vGPU profile cannot run on a GPU alongside other profiles of different type

NVML_VGPU_CAP_EXCLUSIVE_SIZE = 4

vGPU profile cannot run on a GPU alongside other profiles of different size

NVML_VGPU_CAP_COUNT

enum nvmlVgpuDriverCapability_t

vGPU driver queryable capabilities

Values

NVML_VGPU_DRIVER_CAP_HETEROGENEOUS_MULTI_VGPU = 0

Supports mixing of different vGPU profiles within one guest VM.

NVML_VGPU_DRIVER_CAP_WARM_UPDATE = 1

Supports FSR and warm update of vGPU host driver without terminating the running guest VM.

NVML_VGPU_DRIVER_CAP_COUNT

enum nvmlDeviceVgpuCapability_t

Device vGPU queryable capabilities

Values**NVML_DEVICE_VGPU_CAP_FRACTIONAL_MULTI_VGPU = 0**

Query whether the fractional vGPU profiles on this GPU can be used in multi-vGPU configurations.

NVML_DEVICE_VGPU_CAP_HETEROGENEOUS_TIMESLICE_PROFILES = 1

Query whether the GPU support concurrent execution of timesliced vGPU profiles of differing types.

NVML_DEVICE_VGPU_CAP_HETEROGENEOUS_TIMESLICE_SIZES = 2

Query whether the GPU support concurrent execution of timesliced vGPU profiles of differing framebuffer sizes.

NVML_DEVICE_VGPU_CAP_READ_DEVICE_BUFFER_BW = 3

Query the GPU's read_device_buffer expected bandwidth capacity in megabytes per second.

NVML_DEVICE_VGPU_CAP_WRITE_DEVICE_BUFFER_BW = 4

Query the GPU's write_device_buffer expected bandwidth capacity in megabytes per second.

NVML_DEVICE_VGPU_CAP_DEVICE_STREAMING = 5

Query whether the vGPU profiles on the GPU supports migration data streaming.

NVML_DEVICE_VGPU_CAP_MINI_QUARTER_GPU = 6

Set/Get support for mini-quarter vGPU profiles.

NVML_DEVICE_VGPU_CAP_COMPUTE_MEDIA_ENGINE_GPU = 7

Set/Get support for compute media engine vGPU profiles.

NVML_DEVICE_VGPU_CAP_WARM_UPDATE = 8

Query whether the GPU supports FSR and warm update.

NVML_DEVICE_VGPU_CAP_HOMOGENEOUS_PLACEMENTS = 9

Query whether the GPU supports reporting of placements of timesliced vGPU profiles with identical framebuffer sizes.

NVML_DEVICE_VGPU_CAP_MIG_TIMESLICING_SUPPORTED = 10

Query whether the GPU supports timesliced vGPU on MIG.

NVML_DEVICE_VGPU_CAP_MIG_TIMESLICING_ENABLED = 11

Set/Get MIG timesliced mode reporting, without impacting the underlying functionality.

NVML_DEVICE_VGPU_CAP_COUNT**#define NVML_GRID_LICENSE_EXPIRY_NOT_AVAILABLE 0**

Expiry information not available.

Status codes for license expiry

#define NVML_GRID_LICENSE_EXPIRY_INVALID 1

Invalid expiry or error fetching expiry.

```
#define NVML_GRID_LICENSE_EXPIRY_VALID 2
Valid expiry.
```

```
#define NVML_GRID_LICENSE_EXPIRY_NOT_APPLICABLE 3
Expiry not applicable.
```

```
#define NVML_GRID_LICENSE_EXPIRY_PERMANENT 4
Permanent expiry.
```

5.33.2. vGPU Constants

vGPU Enums, Constants, Structs

```
#define NVML_GRID_LICENSE_BUFFER_SIZE 128
```

Buffer size guaranteed to be large enough for `nvmIVgpuTypeGetLicense`

```
#define NVML_VGPU_VIRTUALIZATION_CAP_MIGRATION 0:0
```

Macros for vGPU instance's virtualization capabilities bitfield.

```
#define NVML_VGPU_PGPU_VIRTUALIZATION_CAP_MIGRATION 0:0
```

Macros for pGPU's virtualization capabilities bitfield.

```
#define NVML_VGPU_PGPU_HETEROGENEOUS_MODE 0
```

Macros to indicate the vGPU mode of the GPU.

5.33.3. vGPU Structs

vGPU Enums, Constants, Structs

```

#define nvmlClocksThrottleReasonHwSlowdown 0x0000000000000008LL

HW Slowdown (reducing the core clocks by a factor of 2 or more) is engaged

This is an indicator of:

- ▶ temperature being too high
- ▶ External Power Brake Assertion is triggered (e.g. by the system power supply)
- ▶ Power draw is too high and Fast Trigger protection is reducing the clocks
- ▶ May be also reported during PState or clock change
 - ▶ This behavior may be removed in a later release.

#define nvmlClocksEventReasonSyncBoost 0x0000000000000010LL

Sync Boost

This GPU has been added to a Sync boost group with nvidia-smi or DCGM in order to maximize performance per watt. All GPUs in the sync boost group will boost to the minimum possible clocks across the entire group. Look at the throttle reasons for other GPUs in the system to see why those GPUs are holding this one at lower clocks.

#define nvmlClocksEventReasonSwThermalSlowdown 0x0000000000000020LL

SW Thermal Slowdown

The current clocks have been optimized to ensure the the following is true:

- ▶ Current GPU temperature does not exceed GPU Max Operating Temperature
- ▶ Current memory temperature does not exceed Memory Max Operating Temperature

```
#define nvmlClocksThrottleReasonHwThermalSlowdown  
0x0000000000000040LL
```

HW Thermal Slowdown (reducing the core clocks by a factor of 2 or more) is engaged

This is an indicator of:

- ▶ temperature being too high

6.1. nvmlAccountingStats_t Struct Reference

Describes accounting statistics of a process.

unsigned int nvmlAccountingStats_t::gpuUtilization

Description

Percent of time over the process's lifetime during which one or more kernels was executing on the GPU. Utilization stats just like returned by [nvmlDeviceGetUtilizationRates](#) but for the life time of a process (not just the last sample period). Set to NVML_VALUE_NOT_AVAILABLE if nvmlDeviceGetUtilizationRates is not supported

unsigned int nvmlAccountingStats_t::memoryUtilization

Description

Percent of time over the process's lifetime during which global (device) memory was being read or written. Set to NVML_VALUE_NOT_AVAILABLE if nvmlDeviceGetUtilizationRates is not supported

unsigned long long nvmlAccountingStats_t::maxMemoryUsage

Description

Maximum total memory in bytes that was ever allocated by the process. Set to NVML_VALUE_NOT_AVAILABLE if nvmlProcessInfo_t->usedGpuMemory is not supported

unsigned long long nvmlAccountingStats_t::time

Description

Amount of time in ms during which the compute context was active. The time is reported as 0 if the process is not terminated

unsigned long long nvmlAccountingStats_t::startTime

CPU Timestamp in usec representing start time for the process.

unsigned int nvmlAccountingStats_t::isRunning

Flag to represent if the process is running (1 for running, 0 for terminated).

unsigned int nvmlAccountingStats_t::reserved

Reserved for future use.

6.2. nvmlActiveVgpuInstanceInfo_v1_t Struct Reference

Structure to store active vGPU instance information -- Version 1

unsigned int nvmlActiveVgpuInstanceInfo_v1_t::version

IN: The version number of this struct.

unsigned int**nvmlActiveVgpuInstanceInfo_v1_t::vgpuCount**

IN/OUT: Count of the active vGPU instances.

nvmlVgpuInstance_t***nvmlActiveVgpuInstanceInfo_v1_t::vgpuInstances**

IN/OUT: list of active vGPU instances.

6.3. nvmlBAR1Memory_t Struct Reference

BAR1 Memory allocation Information for a device

unsigned long long nvmlBAR1Memory_t::bar1Total

Total BAR1 Memory (in bytes).

unsigned long long nvmlBAR1Memory_t::bar1Free

Unallocated BAR1 Memory (in bytes).

unsigned long long nvmlBAR1Memory_t::bar1Used

Allocated Used Memory (in bytes).

6.4. nvmlBridgeChipHierarchy_t Struct Reference

This structure stores the complete Hierarchy of the Bridge Chip within the board. The immediate bridge is stored at index 0 of bridgeInfoList, parent to immediate bridge is at index 1 and so forth.

unsigned char nvmlBridgeChipHierarchy_t::bridgeCount

Number of Bridge Chips on the Board.

struct nvmlBridgeChipInfo_t

nvmlBridgeChipHierarchy_t::bridgeChipInfo

Hierarchy of Bridge Chips on the board.

6.5. nvmlBridgeChipInfo_t Struct Reference

Information about the Bridge Chip Firmware

nvmlBridgeChipType_t nvmlBridgeChipInfo_t::type

Type of Bridge Chip.

unsigned int nvmlBridgeChipInfo_t::fwVersion

Firmware Version. 0=Version is unavailable.

6.6. nvmlC2cModelInfo_v1_t Struct Reference

C2C Mode information for a device

6.7. nvmlClkMonFaultInfo_t Struct Reference

Clock Monitor error types

unsigned int nvmlClkMonFaultInfo_t::clkApiDomain

Description

The Domain which faulted

**unsigned int
nvmlClkMonFaultInfo_t::clkDomainFaultMask**

Description

Faults Information

6.8. nvmlClkMonStatus_t Struct Reference

Clock Monitor Status

unsigned int nvmlClkMonStatus_t::bGlobalStatus

Description

Fault status Indicator

unsigned int nvmlClkMonStatus_t::clkMonListSize

Description

Total faulted domain numbers

**struct nvmlClkMonFaultInfo_t
nvmlClkMonStatus_t::clkMonList**

Description

The fault Information structure

6.9. nvmlClockOffset_v1_t Struct Reference

Clock offset info.

unsigned int nvmlClockOffset_v1_t::version

The version number of this struct.

6.10. nvmlComputeInstanceStateProfileInfo_t Struct Reference

Compute instance profile information.

unsigned int nvmlComputeInstanceStateProfileInfo_t::id

Unique profile ID within the GPU instance.

unsigned int**nvmlComputeInstanceStateProfileInfo_t::sliceCount**

GPU Slice count.

unsigned int**nvmlComputeInstanceStateProfileInfo_t::instanceCount**

Compute instance count.

unsigned int**nvmlComputeInstanceStateProfileInfo_t::multiprocessorCount**

Streaming Multiprocessor count.

unsigned int**nvmlComputeInstanceStateProfileInfo_t::sharedCopyEngineCount**

Shared Copy Engine count.

unsigned int**nvmlComputeInstanceStateProfileInfo_t::sharedDecoderCount**

Shared Decoder Engine count.

unsigned int**nvmlComputeInstanceStateProfileInfo_t::sharedEncoderCount**

Shared Encoder Engine count.

unsigned int**nvmlComputeInstanceStateProfileInfo_t::sharedJpegCount**

Shared JPEG Engine count.

unsigned int**nvmlComputeInstanceStateProfileInfo_t::sharedOfaCount**

Shared OFA Engine count.

6.11. `nvmlComputeInstanceStateProfileInfo_v2_t` Struct Reference

Compute instance profile information (v2).

Version 2 adds the `nvmlComputeInstanceStateProfileInfo_v2_t::version` field to the start of the structure, and the `nvmlComputeInstanceStateProfileInfo_v2_t::name` field to the end. This structure is not backwards-compatible with `nvmlComputeInstanceStateProfileInfo_t`.

unsigned int

nvmlComputeInstanceStateProfileInfo_v2_t::version

Structure version identifier (set to nvmlComputeInstanceStateProfileInfo_v2).

unsigned int nvmlComputeInstanceStateProfileInfo_v2_t::id

Unique profile ID within the GPU instance.

unsigned int

nvmlComputeInstanceStateProfileInfo_v2_t::sliceCount

GPU Slice count.

unsigned int

nvmlComputeInstanceStateProfileInfo_v2_t::instanceCount

Compute instance count.

unsigned int

nvmlComputeInstanceStateProfileInfo_v2_t::multiprocessorCount

Streaming Multiprocessor count.

unsigned int

nvmlComputeInstanceStateProfileInfo_v2_t::sharedCopyEngineCount

Shared Copy Engine count.

unsigned int

nvmlComputeInstanceStateProfileInfo_v2_t::sharedDecoderCount

Shared Decoder Engine count.

unsigned int

nvmlComputeInstanceStateProfileInfo_v2_t::sharedEncoderCount

Shared Encoder Engine count.

unsigned int

nvmlComputeInstanceStateProfileInfo_v2_t::sharedJpegCount

Shared JPEG Engine count.

**unsigned int
nvmlComputeInstanceStateProfileInfo_v2_t::sharedOfaCount**
Shared OFA Engine count.

char nvmlComputeInstanceStateProfileInfo_v2_t::name
Profile name.

6.12. nvmlComputeInstanceStateProfileInfo_v3_t Struct Reference

Compute instance profile information (v3).

Version 3 adds the **nvmlComputeInstanceStateProfileInfo_v3_t::capabilities** field
nvmlComputeInstanceStateProfileInfo_t.

unsigned int

nvmlComputeInstanceStateProfileInfo_v3_t::version

Structure version identifier (set to nvmlComputeInstanceStateProfileInfo_v3).

unsigned int nvmlComputeInstanceStateProfileInfo_v3_t::id

Unique profile ID within the GPU instance.

unsigned int

nvmlComputeInstanceStateProfileInfo_v3_t::sliceCount

GPU Slice count.

unsigned int

nvmlComputeInstanceStateProfileInfo_v3_t::instanceCount

Compute instance count.

unsigned int

nvmlComputeInstanceStateProfileInfo_v3_t::multiprocessorCount

Streaming Multiprocessor count.

unsigned int

nvmlComputeInstanceStateProfileInfo_v3_t::sharedCopyEngineCount

Shared Copy Engine count.

unsigned int

nvmlComputeInstanceStateProfileInfo_v3_t::sharedDecoderCount

Shared Decoder Engine count.

unsigned int

nvmlComputeInstanceStateProfileInfo_v3_t::sharedEncoderCount

Shared Encoder Engine count.

unsigned int

nvmlComputeInstanceStateProfileInfo_v3_t::sharedJpegCount

Shared JPEG Engine count.

unsigned int
nvmlComputeInstanceStateProfileInfo_v3_t::sharedOfaCount
Shared OFA Engine count.

char nvmlComputeInstanceStateProfileInfo_v3_t::name
Profile name.

unsigned int
nvmlComputeInstanceStateProfileInfo_v3_t::capabilities
Additional capabilities.

6.13. nvmlConfComputeMemSizeInfo_t Struct Reference

Protected memory size

6.14. nvmlDeviceAddressingMode_v1_t Struct Reference

Struct to represent device addressing mode information

unsigned int nvmlDeviceAddressingMode_v1_t::version
API version.

unsigned int nvmlDeviceAddressingMode_v1_t::value
One of nvmlDeviceAddressingModeType_t.

6.15. nvmlDeviceCapabilities_v1_t Struct Reference

Device capabilities

unsigned int nvmlDeviceCapabilities_v1_t::version

the API version number

unsigned int nvmlDeviceCapabilities_v1_t::capMask

OUT: Bit mask of capabilities.

6.16. nvmlDeviceCurrentClockFreqs_v1_t Struct Reference

Device current clocks string

unsigned int

nvmlDeviceCurrentClockFreqs_v1_t::version

the API version number

char nvmlDeviceCurrentClockFreqs_v1_t::str

OUT: the current clock frequency string.

6.17. nvmlDevicePerfModes_v1_t Struct Reference

Device performance modes string

unsigned int nvmlDevicePerfModes_v1_t::version

the API version number

char nvmlDevicePerfModes_v1_t::str

OUT: the performance modes string.

6.18. nvmlDramEncryptionInfo_v1_t Struct Reference

DRAM Encryption Info

unsigned int nvmlDramEncryptionInfo_v1_t::version

IN - the API version number.

nvmlEnableState_t

nvmlDramEncryptionInfo_v1_t::encryptionState

IN/OUT - DRAM Encryption state.

6.19. nvmlEccErrorCounts_t Struct Reference

Detailed ECC error counts for a device.

Deprecated Different GPU families can have different memory error counters See [nvmlDeviceGetMemoryErrorCounter](#)

unsigned long long nvmlEccErrorCounts_t::l1Cache

L1 cache errors.

unsigned long long nvmlEccErrorCounts_t::l2Cache

L2 cache errors.

unsigned long long

nvmlEccErrorCounts_t::deviceMemory

Device memory errors.

unsigned long long nvmlEccErrorCounts_t::registerFile

Register file errors.

6.20. nvmlEccSramErrorStatus_v1_t Struct Reference

Structure to store SRAM uncorrectable error counters

unsigned int nvmlEccSramErrorStatus_v1_t::version

the API version number

unsigned long long

nvmlEccSramErrorStatus_v1_t::aggregateUncParity

aggregate uncorrectable parity error count

unsigned long long

nvmlEccSramErrorStatus_v1_t::aggregateUncSecDed

aggregate uncorrectable SEC-DED error count

unsigned long long

nvmlEccSramErrorStatus_v1_t::aggregateCor

aggregate correctable error count

unsigned long long

nvmlEccSramErrorStatus_v1_t::volatileUncParity

volatile uncorrectable parity error count

unsigned long long

nvmlEccSramErrorStatus_v1_t::volatileUncSecDed

volatile uncorrectable SEC-DED error count

unsigned long long

nvmlEccSramErrorStatus_v1_t::volatileCor

volatile correctable error count

unsigned long long

nvmlEccSramErrorStatus_v1_t::aggregateUncBucketL2

aggregate uncorrectable error count for L2 cache bucket

unsigned long long

nvmlEccSramErrorStatus_v1_t::aggregateUncBucketSm

aggregate uncorrectable error count for SM bucket

unsigned long long
nvmlEccSramErrorStatus_v1_t::aggregateUncBucketPcie
aggregate uncorrectable error count for PCIE bucket

unsigned long long
nvmlEccSramErrorStatus_v1_t::aggregateUncBucketMcu
aggregate uncorrectable error count for Microcontroller bucket

unsigned long long
nvmlEccSramErrorStatus_v1_t::aggregateUncBucketOther
aggregate uncorrectable error count for Other bucket

unsigned int
nvmlEccSramErrorStatus_v1_t::bThresholdExceeded
if the error threshold of field diag is exceeded

6.21. nvmlEncoderSessionInfo_t Struct Reference

Structure to hold encoder session data

unsigned int nvmlEncoderSessionInfo_t::sessionId

Unique session ID.

unsigned int nvmlEncoderSessionInfo_t::pid

Owning process ID.

nvmlVgpuInstance_t**nvmlEncoderSessionInfo_t::vgpuInstance**

Owning vGPU instance ID (only valid on vGPU hosts, otherwise zero).

nvmlEncoderType_t**nvmlEncoderSessionInfo_t::codecType**

Video encoder type.

unsigned int nvmlEncoderSessionInfo_t::hResolution

Current encode horizontal resolution.

unsigned int nvmlEncoderSessionInfo_t::vResolution

Current encode vertical resolution.

unsigned int nvmlEncoderSessionInfo_t::averageFps

Moving average encode frames per second.

unsigned int nvmlEncoderSessionInfo_t::averageLatency

Moving average encode latency in microseconds.

6.22. nvmlEventData_t Struct Reference

Information about occurred event

nvmlDevice_t nvmlEventData_t::device

Specific device where the event occurred.

unsigned long long nvmlEventData_t::eventType

Information about what specific event occurred.

unsigned long long nvmlEventData_t::eventData

Stores Xid error for the device in the event of nvmlEventTypeXidCriticalError,.

unsigned int nvmlEventData_t::gpuInstanceld

If MIG is enabled and nvmlEventTypeXidCriticalError event is attributable to a GPU.

unsigned int nvmlEventData_t::computeInstanceld

If MIG is enabled and nvmlEventTypeXidCriticalError event is attributable to a.

6.23. nvmlExcludedDeviceInfo_t Struct Reference

Excluded GPU device information

struct nvmlPciInfo_t nvmlExcludedDeviceInfo_t::pciInfo

The PCI information for the excluded GPU.

char nvmlExcludedDeviceInfo_t::uuid

The ASCII string UUID for the excluded GPU.

6.24. nvmlFanSpeedInfo_v1_t Struct Reference

Fan speed info.

unsigned int nvmlFanSpeedInfo_v1_t::version

the API version number

unsigned int nvmlFanSpeedInfo_v1_t::fan

the fan index

unsigned int nvmlFanSpeedInfo_v1_t::speed

OUT: the fan speed in RPM.

6.25. nvmlFBCSessionInfo_t Struct Reference

Structure to hold FBC session data

unsigned int nvmlFBCSessionInfo_t::sessionId

Unique session ID.

unsigned int nvmlFBCSessionInfo_t::pid

Owning process ID.

nvmlVgpuInstance_t**nvmlFBCSessionInfo_t::vgpuInstance**

Owning vGPU instance ID (only valid on vGPU hosts, otherwise zero).

unsigned int nvmlFBCSessionInfo_t::displayOrdinal

Display identifier.

nvmlFBCSessionType_t**nvmlFBCSessionInfo_t::sessionType**

Type of frame buffer capture session.

unsigned int nvmlFBCSessionInfo_t::sessionFlags

Session flags (one or more of NVML_NVFBC_SESSION_FLAG_XXX).

unsigned int nvmlFBCSessionInfo_t::hMaxResolution

Max horizontal resolution supported by the capture session.

unsigned int nvmlFBCSessionInfo_t::vMaxResolution

Max vertical resolution supported by the capture session.

unsigned int nvmlFBCSessionInfo_t::hResolution

Horizontal resolution requested by caller in capture call.

unsigned int nvmlFBCSessionInfo_t::vResolution

Vertical resolution requested by caller in capture call.

unsigned int nvmlFBCSessionInfo_t::averageFPS

Moving average new frames captured per second.

unsigned int nvmlFBCSessionInfo_t::averageLatency

Moving average new frame capture latency in microseconds.

6.26. nvmlFBCStats_t Struct Reference

Structure to hold frame buffer capture sessions stats

unsigned int nvmlFBCStats_t::sessionsCount

Total no of sessions.

unsigned int nvmlFBCStats_t::averageFPS

Moving average new frames captured per second.

unsigned int nvmlFBCStats_t::averageLatency

Moving average new frame capture latency in microseconds.

6.27. nvmlFieldValue_t Struct Reference

Information for a Field Value Sample

unsigned int nvmlFieldValue_t::fieldId

ID of the NVML field to retrieve. This must be set before any call that uses this struct. See the constants starting with NVML_FI_ above.

unsigned int nvmlFieldValue_t::scopeId

Scope ID can represent data used by NVML depending on fieldId's context. For example, for NVLink throughput counter data, scopeId can represent linkId.

long long nvmlFieldValue_t::timestamp

CPU Timestamp of this value in microseconds since 1970.

long long nvmlFieldValue_t::latencyUsec

How long this field value took to update (in usec) within NVML. This may be averaged across several fields that are serviced by the same driver call.

nvmlValueType_t nvmlFieldValue_t::valueType

Type of the value stored in value.

nvmlReturn_t nvmlFieldValue_t::nvmlReturn

Return code for retrieving this value. This must be checked before looking at value, as value is undefined if nvmlReturn != NVML_SUCCESS.

nvmlFieldValue_t::value

Value for this field. This is only valid if nvmlReturn == NVML_SUCCESS.

6.28. nvmlGpmMetric_t Struct Reference

GPM metric information.

unsigned int nvmlGpmMetric_t::metricId

IN: NVML_GPM_METRIC_? define of which metric to retrieve.

nvmlReturn_t nvmlGpmMetric_t::nvmlReturn

OUT: Status of this metric. If this is nonzero, then value is not valid.

double nvmlGpmMetric_t::value

OUT: Value of this metric. Is only valid if nvmlReturn is 0 (NVML_SUCCESS).

nvmlGpmMetric_t::@8 nvmlGpmMetric_t::metricInfo

OUT: Metric name and unit. Those can be NULL if not defined.

6.29. nvmlGpmMetricsGet_t Struct Reference

GPM buffer information.

unsigned int nvmlGpmMetricsGet_t::version

IN: Set to NVML_GPM_METRICS_GET_VERSION.

unsigned int nvmlGpmMetricsGet_t::numMetrics

IN: How many metrics to retrieve in metrics[].

nvmlGpmSample_t nvmlGpmMetricsGet_t::sample1

IN: Sample buffer.

nvmlGpmSample_t nvmlGpmMetricsGet_t::sample2

IN: Sample buffer.

struct nvmlGpmMetric_t nvmlGpmMetricsGet_t::metrics

IN/OUT: Array of metrics. Set metricId on call. See nvmlReturn and value on return.

6.30. nvmlGpmSupport_t Struct Reference

GPM device information.

unsigned int nvmlGpmSupport_t::version

IN: Set to NVML_GPM_SUPPORT_VERSION.

unsigned int nvmlGpmSupport_t::isSupportedDevice

OUT: Indicates device support.

6.31. nvmlGpuFabricInfo_t Struct Reference

Contains the device fabric information

unsigned char nvmlGpuFabricInfo_t::clusterUuid

Uuid of the cluster to which this GPU belongs.

nvmlReturn_t nvmlGpuFabricInfo_t::status

Error status, if any. Must be checked only if state returns "complete".

unsigned int nvmlGpuFabricInfo_t::cliqueId

ID of the fabric clique to which this GPU belongs.

nvmlGpuFabricState_t nvmlGpuFabricInfo_t::state

Current state of GPU registration process. See NVML_GPU_FABRIC_STATE_*.

6.32. nvmlGpuFabricInfo_v2_t Struct Reference

GPU Fabric information (v2).

Deprecated `nvmlGpuFabricInfo_v2_t` is deprecated and will be removed in a future release. Use `nvmlGpuFabricInfo_v3_t` instead

Version 2 adds the `nvmlGpuFabricInfo_v2_t::version` field to the start of the structure, and the `nvmlGpuFabricInfo_v2_t::healthMask` field to the end. This structure is not backwards-compatible with `nvmlGpuFabricInfo_t`.

unsigned int nvmlGpuFabricInfo_v2_t::version

Structure version identifier (set to nvmlGpuFabricInfo_v2).

unsigned char nvmlGpuFabricInfo_v2_t::clusterUuid

Uuid of the cluster to which this GPU belongs.

nvmlReturn_t nvmlGpuFabricInfo_v2_t::status

Probe Error status, if any. Must be checked only if Probe state returns "complete".

unsigned int nvmlGpuFabricInfo_v2_t::cliqueId

ID of the fabric clique to which this GPU belongs.

nvmlGpuFabricState_t nvmlGpuFabricInfo_v2_t::state

Current Probe State of GPU registration process. See NVML_GPU_FABRIC_STATE_*.

unsigned int nvmlGpuFabricInfo_v2_t::healthMask

GPU Fabric health Status Mask. See NVML_GPU_FABRIC_HEALTH_MASK_*.

6.33. nvmlGpuFabricInfo_v3_t Struct Reference

GPU Fabric information (v3).

unsigned int nvmlGpuFabricInfo_v3_t::version

Structure version identifier (set to nvmlGpuFabricInfo_v2).

unsigned char nvmlGpuFabricInfo_v3_t::clusterUuid

Uuid of the cluster to which this GPU belongs.

nvmlReturn_t nvmlGpuFabricInfo_v3_t::status

Probe Error status, if any. Must be checked only if Probe state returns "complete".

unsigned int nvmlGpuFabricInfo_v3_t::cliqueId

ID of the fabric clique to which this GPU belongs.

nvmlGpuFabricState_t nvmlGpuFabricInfo_v3_t::state

Current Probe State of GPU registration process. See NVML_GPU_FABRIC_STATE_*.

unsigned int nvmlGpuFabricInfo_v3_t::healthMask

GPU Fabric health Status Mask. See NVML_GPU_FABRIC_HEALTH_MASK_*.

unsigned char nvmlGpuFabricInfo_v3_t::healthSummary

GPU Fabric health summary. See NVML_GPU_FABRIC_HEALTH_SUMMARY_*.

6.34. nvmlGpuInstanceProfileInfo_t Struct Reference

GPU instance profile information.

unsigned int nvmlGpuInstanceProfileInfo_t::id

Unique profile ID within the device.

unsigned int**nvmlGpuInstanceProfileInfo_t::isP2pSupported**

Peer-to-Peer support.

unsigned int nvmlGpuInstanceProfileInfo_t::sliceCount

GPU Slice count.

unsigned int**nvmlGpuInstanceProfileInfo_t::instanceCount**

GPU instance count.

unsigned int**nvmlGpuInstanceProfileInfo_t::multiprocessorCount**

Streaming Multiprocessor count.

unsigned int**nvmlGpuInstanceProfileInfo_t::copyEngineCount**

Copy Engine count.

unsigned int**nvmlGpuInstanceProfileInfo_t::decoderCount**

Decoder Engine count.

unsigned int**nvmlGpuInstanceProfileInfo_t::encoderCount**

Encoder Engine count.

unsigned int nvmlGpuInstanceProfileInfo_t::jpegCount

JPEG Engine count.

unsigned int nvmlGpuInstanceProfileInfo_t::ofaCount

OFA Engine count.

`unsigned long long
nvmlGpuInstanceProfileInfo_t::memorySizeMB`
Memory size in MBytes.

6.35. `nvmlGpuInstanceProfileInfo_v2_t` Struct Reference

GPU instance profile information (v2).

Version 2 adds the `nvmlGpuInstanceProfileInfo_v2_t::version` field to the start of the structure, and the `nvmlGpuInstanceProfileInfo_v2_t::name` field to the end. This structure is not backwards-compatible with `nvmlGpuInstanceProfileInfo_t`.

unsigned int nvmlGpuInstanceStateProfileInfo_v2_t::version

Structure version identifier (set to nvmlGpuInstanceStateProfileInfo_v2).

unsigned int nvmlGpuInstanceStateProfileInfo_v2_t::id

Unique profile ID within the device.

unsigned int**nvmlGpuInstanceStateProfileInfo_v2_t::isP2pSupported**

Peer-to-Peer support.

unsigned int**nvmlGpuInstanceStateProfileInfo_v2_t::sliceCount**

GPU Slice count.

unsigned int**nvmlGpuInstanceStateProfileInfo_v2_t::instanceCount**

GPU instance count.

unsigned int**nvmlGpuInstanceStateProfileInfo_v2_t::multiprocessorCount**

Streaming Multiprocessor count.

unsigned int**nvmlGpuInstanceStateProfileInfo_v2_t::copyEngineCount**

Copy Engine count.

unsigned int**nvmlGpuInstanceStateProfileInfo_v2_t::decoderCount**

Decoder Engine count.

unsigned int**nvmlGpuInstanceStateProfileInfo_v2_t::encoderCount**

Encoder Engine count.

unsigned int**nvmlGpuInstanceStateProfileInfo_v2_t::jpegCount**

JPEG Engine count.

unsigned int nvmlGpuInstanceStateProfileInfo_v2_t::ofaCount
OFA Engine count.

**unsigned long long
nvmlGpuInstanceStateProfileInfo_v2_t::memorySizeMB**
Memory size in MBytes.

char nvmlGpuInstanceStateProfileInfo_v2_t::name
Profile name.

6.36. nvmlGpuInstanceStateProfileInfo_v3_t Struct Reference

GPU instance profile information (v3).

Version 3 removes isP2pSupported field and adds the
`nvmlGpuInstanceStateProfileInfo_v3_t::capabilities` field `nvmlGpuInstanceStateProfileInfo_t`.

unsigned int nvmlGpuInstanceStateProfileInfo_v3_t::version

Structure version identifier (set to nvmlGpuInstanceStateProfileInfo_v3).

unsigned int nvmlGpuInstanceStateProfileInfo_v3_t::id

Unique profile ID within the device.

unsigned int**nvmlGpuInstanceStateProfileInfo_v3_t::sliceCount**

GPU Slice count.

unsigned int**nvmlGpuInstanceStateProfileInfo_v3_t::instanceCount**

GPU instance count.

unsigned int**nvmlGpuInstanceStateProfileInfo_v3_t::multiprocessorCount**

Streaming Multiprocessor count.

unsigned int**nvmlGpuInstanceStateProfileInfo_v3_t::copyEngineCount**

Copy Engine count.

unsigned int**nvmlGpuInstanceStateProfileInfo_v3_t::decoderCount**

Decoder Engine count.

unsigned int**nvmlGpuInstanceStateProfileInfo_v3_t::encoderCount**

Encoder Engine count.

unsigned int**nvmlGpuInstanceStateProfileInfo_v3_t::jpegCount**

JPEG Engine count.

unsigned int nvmlGpuInstanceStateProfileInfo_v3_t::ofaCount

OFA Engine count.

unsigned long long
nvmlGpuInstanceStateProfileInfo_v3_t::memorySizeMB
Memory size in MBytes.

char nvmlGpuInstanceStateProfileInfo_v3_t::name
Profile name.

unsigned int
nvmlGpuInstanceStateProfileInfo_v3_t::capabilities
Additional capabilities.

6.37. **nvmlGpuThermalSettings_t** Struct Reference

Struct to hold the thermal sensor settings

6.38. **nvmlGridLicensableFeature_t** Struct Reference

Structure containing vGPU software licensable feature information

nvmlGridLicenseFeatureCode_t
nvmlGridLicensableFeature_t::featureCode

Licensed feature code.

unsigned int nvmlGridLicensableFeature_t::featureState

Non-zero if feature is currently licensed, otherwise zero.

char nvmlGridLicensableFeature_t::licenseInfo

Deprecated.

char nvmlGridLicensableFeature_t::productName

Product name of feature.

unsigned int

nvmlGridLicensableFeature_t::featureEnabled

Non-zero if feature is enabled, otherwise zero.

struct nvmlGridLicenseExpiry_t

nvmlGridLicensableFeature_t::licenseExpiry

License expiry structure containing date and time.

6.39. nvmlGridLicensableFeatures_t Struct Reference

Structure to store vGPU software licensable features

int

nvmlGridLicensableFeatures_t::isGridLicenseSupported

Non-zero if vGPU Software Licensing is supported on the system, otherwise zero.

unsigned int

nvmlGridLicensableFeatures_t::licensableFeaturesCount

Entries returned in gridLicensableFeatures array.

struct nvmlGridLicensableFeature_t

nvmlGridLicensableFeatures_t::gridLicensableFeatures

Array of vGPU software licensable features.

6.40. nvmlGridLicenseExpiry_t Struct Reference

Structure to store license expiry date and time values

unsigned int nvmlGridLicenseExpiry_t::year

Year value of license expiry.

unsigned short nvmlGridLicenseExpiry_t::month

Month value of license expiry.

unsigned short nvmlGridLicenseExpiry_t::day

Day value of license expiry.

unsigned short nvmlGridLicenseExpiry_t::hour

Hour value of license expiry.

unsigned short nvmlGridLicenseExpiry_t::min

Minutes value of license expiry.

unsigned short nvmlGridLicenseExpiry_t::sec

Seconds value of license expiry.

unsigned char nvmlGridLicenseExpiry_t::status

License expiry status.

6.41. nvmlHwbcEntry_t Struct Reference

Description of HWBC entry

6.42. nvmlLedState_t Struct Reference

LED states for an S-class unit.

char nvmlLedState_t::cause

If amber, a text description of the cause.

nvmlLedColor_t nvmlLedState_t::color

GREEN or AMBER.

6.43. nvmlMarginTemperature_v1_t Struct Reference

Margin temperature values

unsigned int nvmlMarginTemperature_v1_t::version

The version number of this struct.

int nvmlMarginTemperature_v1_t::marginTemperature

The margin temperature value.

6.44. nvmlMemory_t Struct Reference

Memory allocation information for a device (v1). The total amount is equal to the sum of the amounts of free and used memory.

unsigned long long nvmlMemory_t::total

Total physical device memory (in bytes).

unsigned long long nvmlMemory_t::free

Unallocated device memory (in bytes).

unsigned long long nvmlMemory_t::used

Description

Sum of Reserved and Allocated device memory (in bytes). Note that the driver/GPU always sets aside a small amount of memory for bookkeeping

6.45. nvmlMemory_v2_t Struct Reference

Memory allocation information for a device (v2).

Version 2 adds versioning for the struct and the amount of system-reserved memory as an output.

unsigned int nvmlMemory_v2_t::version

Structure format version (must be 2).

unsigned long long nvmlMemory_v2_t::total

Total physical device memory (in bytes).

unsigned long long nvmlMemory_v2_t::reserved

Device memory (in bytes) reserved for system use (driver or firmware).

unsigned long long nvmlMemory_v2_t::free

Unallocated device memory (in bytes).

unsigned long long nvmlMemory_v2_t::used

Allocated device memory (in bytes).

6.46. nvmlNvlinkFirmwareInfo_t Struct Reference

Struct to represent NVLINK firmware information

struct nvmlNvlinkFirmwareVersion_t

nvmlNvlinkFirmwareInfo_t::firmwareVersion

OUT - NVLINK firmware version.

unsigned int

nvmlNvlinkFirmwareInfo_t::numValidEntries

OUT - Number of valid firmware entries.

6.47. nvmlNvlinkFirmwareVersion_t Struct Reference

Struct to represent NVLINK firmware Semantic versioning and ucode type

6.48. nvmlNvLinkInfo_v1_t Struct Reference

Struct to represent per device NVLINK information v1

unsigned int nvmlNvLinkInfo_v1_t::version

IN - the API version number.

unsigned int nvmlNvLinkInfo_v1_t::isNvleEnabled

OUT - NVLINK encryption enablement.

6.49. nvmlNvLinkInfo_v2_t Struct Reference

Struct to represent per device NVLINK information v2

unsigned int nvmlNvLinkInfo_v2_t::version

IN - the API version number.

unsigned int nvmlNvLinkInfo_v2_t::isNvleEnabled

OUT - NVLINK encryption enablement.

**struct nvmlNvlinkFirmwareInfo_t
nvmlNvLinkInfo_v2_t::firmwareInfo**

OUT - NVLINK Firmware info.

6.50. nvmlNvLinkUtilizationControl_t Struct Reference

Struct to define the NVLINK counter controls

6.51. nvmlPciInfo_t Struct Reference

PCI information about a GPU device.

char nvmlPciInfo_t::busIdLegacy

The legacy tuple domain:bus:device.function PCI identifier (& NULL terminator).

unsigned int nvmlPciInfo_t::domain

The PCI domain on which the device's bus resides, 0 to 0xffffffff.

unsigned int nvmlPciInfo_t::bus

The bus on which the device resides, 0 to 0xff.

unsigned int nvmlPciInfo_t::device

The device's id on the bus, 0 to 31.

unsigned int nvmlPciInfo_t::pciDeviceId

The combined 16-bit device id and 16-bit vendor id.

unsigned int nvmlPciInfo_t::pciSubSystemId

The 32-bit Sub System Device ID.

char nvmlPciInfo_t::busId

The tuple domain:bus:device.function PCI identifier (& NULL terminator).

6.52. nvmlPciInfoExt_v1_t Struct Reference

PCI information about a GPU device.

unsigned int nvmlPciInfoExt_v1_t::version

The version number of this struct.

unsigned int nvmlPciInfoExt_v1_t::domain

The PCI domain on which the device's bus resides, 0 to 0xffffffff.

unsigned int nvmlPciInfoExt_v1_t::bus

The bus on which the device resides, 0 to 0xff.

unsigned int nvmlPciInfoExt_v1_t::device

The device's id on the bus, 0 to 31.

unsigned int nvmlPciInfoExt_v1_t::pciDeviceId

The combined 16-bit device id and 16-bit vendor id.

unsigned int nvmlPciInfoExt_v1_t::pciSubSystemId

The 32-bit Sub System Device ID.

unsigned int nvmlPciInfoExt_v1_t::baseClass

The 8-bit PCI base class code.

unsigned int nvmlPciInfoExt_v1_t::subClass

The 8-bit PCI sub class code.

char nvmlPciInfoExt_v1_t::busId

The tuple domain:bus:device.function PCI identifier (& NULL terminator).

6.53. nvmlPdi_v1_t Struct Reference

Struct to represent the NVML PDI information

`unsigned int nvmlPdi_v1_t::version`

API version number.

`unsigned long long nvmlPdi_v1_t::value`

64-bit PDI value

6.54. `nvmlPlatformInfo_v1_t` Struct Reference

Structure to store platform information

Deprecated The `nvmlPlatformInfo_v1_t` will be deprecated in the subsequent releases.
Use `nvmlPlatformInfo_v2_t`

unsigned int nvmlPlatformInfo_v1_t::version

the API version number

unsigned char nvmlPlatformInfo_v1_t::ibGuid

Infiniband GUID reported by platform (for Blackwell, ibGuid is 8 bytes so indices 8-15 are zero).

unsigned char nvmlPlatformInfo_v1_t::rackGuid

GUID of the rack containing this GPU (for Blackwell rackGuid is 13 bytes so indices 13-15 are zero).

unsigned char**nvmlPlatformInfo_v1_t::chassisPhysicalSlotNumber**

The slot number in the rack containing this GPU (includes switches).

unsigned char**nvmlPlatformInfo_v1_t::computeSlotIndex**

The index within the compute slots in the rack containing this GPU (does not include switches).

unsigned char nvmlPlatformInfo_v1_t::nodeIndex

Index of the node within the slot containing this GPU.

unsigned char nvmlPlatformInfo_v1_t::peerType

Platform indicated NVLink-peer type (e.g. switch present or not).

unsigned char nvmlPlatformInfo_v1_t::moduleId

ID of this GPU within the node.

6.55. nvmlPlatformInfo_v2_t Struct Reference

Structure to store platform information (v2)

unsigned int nvmlPlatformInfo_v2_t::version

the API version number

unsigned char nvmlPlatformInfo_v2_t::ibGuid

Infiniband GUID reported by platform (for Blackwell, ibGuid is 8 bytes so indices 8-15 are zero).

unsigned char**nvmlPlatformInfo_v2_t::chassisSerialNumber**

Serial number of the chassis containing this GPU (for Blackwell it is 13 bytes so indices 13-15 are zero).

unsigned char nvmlPlatformInfo_v2_t::slotNumber

The slot number in the chassis containing this GPU (includes switches).

unsigned char nvmlPlatformInfo_v2_t::trayIndex

The tray index within the compute slots in the chassis containing this GPU (does not include switches).

unsigned char nvmlPlatformInfo_v2_t::hostId

Index of the node within the slot containing this GPU.

unsigned char nvmlPlatformInfo_v2_t::peerType

Platform indicated NVLink-peer type (e.g. switch present or not).

unsigned char nvmlPlatformInfo_v2_t::moduleId

ID of this GPU within the node.

6.56. nvmlPowerSmoothingProfile_v1_t Struct Reference

Power Smoothing Structure for Profile information

unsigned int nvmlPowerSmoothingProfile_v1_t::version

the API version number

unsigned int nvmlPowerSmoothingProfile_v1_t::profileId

The requested profile ID.

unsigned int nvmlPowerSmoothingProfile_v1_t::paramId

The requested parameter ID.

double nvmlPowerSmoothingProfile_v1_t::value

The requested value for the given parameter.

6.57. nvmlPowerSmoothingState_v1_t Struct Reference

Power Smoothing Structure for Feature Enablement

unsigned int nvmlPowerSmoothingState_v1_t::version

the API version number

nvmlEnableState_t

nvmlPowerSmoothingState_v1_t::state

0/Disabled or 1/Enabled

6.58. nvmlPowerValue_v2_t Struct Reference

Contains the power management limit

unsigned int nvmlPowerValue_v2_t::version

Structure format version (must be 1).

nvmlPowerScopeType_t**nvmlPowerValue_v2_t::powerScope**

[in] Device type: GPU or Total Module

unsigned int nvmlPowerValue_v2_t::powerValueMw

[out] Power value to retrieve or set in milliwatts

6.59. nvmlPRMTLV_v1_t Struct Reference

Main PRM input structure

unsigned nvmlPRMTLV_v1_t::dataSize

Size of the input TLV data.

unsigned nvmlPRMTLV_v1_t::status

OUT: status of the PRM command.

unsigned char nvmlPRMTLV_v1_t::inData

IN: Input data in TLV format.

unsigned char nvmlPRMTLV_v1_t::outData

OUT: Output PRM data in TLV format.

6.60. nvmlProcessDetail_v1_t Struct Reference

Information about running process on the GPU with protected memory

unsigned int nvmlProcessDetail_v1_t::pid

Process ID.

**unsigned long long
nvmlProcessDetail_v1_t::usedGpuMemory****Description**

Amount of used GPU memory in bytes. Under WDDM,
NVML_VALUE_NOT_AVAILABLE is always reported because Windows KMD
manages all the memory and not the NVIDIA driver

unsigned int nvmlProcessDetail_v1_t::gpuInstanceId

If MIG is enabled, stores a valid GPU instance ID. gpuInstanceId is.

**unsigned int
nvmlProcessDetail_v1_t::computeInstanceId**

If MIG is enabled, stores a valid compute instance ID. computeInstanceId.

**unsigned long long
nvmlProcessDetail_v1_t::usedGpuCcProtectedMemory**

Amount of used GPU conf compute protected memory in bytes.

6.61. nvmlProcessDetailList_v1_t Struct Reference

Information about all running processes on the GPU for the given mode

unsigned int nvmlProcessDetailList_v1_t::version

Struct version, MUST be nvmlProcessDetailList_v1.

unsigned int nvmlProcessDetailList_v1_t::mode

Process mode(Compute/Graphics/MPSCompute).

unsigned int**nvmlProcessDetailList_v1_t::numProcArrayEntries**

Number of process entries in procArray.

nvmlProcessDetail_v1_t***nvmlProcessDetailList_v1_t::procArray**

Process array.

6.62. nvmlProcessesUtilizationInfo_v1_t Struct Reference

Structure to store utilization and process ID for each running process -- version 1

unsigned int nvmlProcessesUtilizationInfo_v1_t::version

The version number of this struct.

unsigned int**nvmlProcessesUtilizationInfo_v1_t::processSamplesCount**

Caller-supplied array size, and returns number of processes running.

unsigned long long**nvmlProcessesUtilizationInfo_v1_t::lastSeenTimeStamp**

Return only samples with timestamp greater than lastSeenTimeStamp.

nvmlProcessUtilizationInfo_v1_t***nvmlProcessesUtilizationInfo_v1_t::procUtilArray**

The array (allocated by caller) of the utilization of GPU SM, framebuffer, video encoder, video decoder, JPEG, and OFA.

6.63. nvmlProcessInfo_t Struct Reference

Information about running compute processes on the GPU

unsigned int nvmlProcessInfo_t::pid

Process ID.

unsigned long long nvmlProcessInfo_t::usedGpuMemory**Description**

Amount of used GPU memory in bytes. Under WDDM,

NVML_VALUE_NOT_AVAILABLE is always reported because Windows KMD manages all the memory and not the NVIDIA driver

unsigned int nvmlProcessInfo_t::gpuInstanceId

If MIG is enabled, stores a valid GPU instance ID. gpuInstanceId is set to.

unsigned int nvmlProcessInfo_t::computeInstanceId

If MIG is enabled, stores a valid compute instance ID. computeInstanceId is set to.

6.64. nvmlProcessInfo_v1_t Struct Reference

Information about running compute processes on the GPU, legacy version for older versions of the API.

unsigned int nvmlProcessInfo_v1_t::pid

Process ID.

unsigned long long nvmlProcessInfo_v1_t::usedGpuMemory

Description

Amount of used GPU memory in bytes. Under WDDM, NVML_VALUE_NOT_AVAILABLE is always reported because Windows KMD manages all the memory and not the NVIDIA driver

6.65. nvmlProcessUtilizationInfo_v1_t Struct Reference

Structure to store utilization value and process Id -- version 1

unsigned long long
nvmlProcessUtilizationInfo_v1_t::timeStamp
CPU Timestamp in microseconds.

unsigned int nvmlProcessUtilizationInfo_v1_t::pid
PID of process.

unsigned int nvmlProcessUtilizationInfo_v1_t::smUtil
SM (3D/Compute) Util Value.

unsigned int nvmlProcessUtilizationInfo_v1_t::memUtil
Frame Buffer Memory Util Value.

unsigned int nvmlProcessUtilizationInfo_v1_t::encUtil
Encoder Util Value.

unsigned int nvmlProcessUtilizationInfo_v1_t::decUtil
Decoder Util Value.

unsigned int nvmlProcessUtilizationInfo_v1_t::jpgUtil
Jpeg Util Value.

unsigned int nvmlProcessUtilizationInfo_v1_t::ofaUtil
Ofa Util Value.

6.66. nvmlProcessUtilizationSample_t Struct Reference

Structure to store utilization value and process Id

unsigned int nvmlProcessUtilizationSample_t::pid

PID of process.

unsigned long long**nvmlProcessUtilizationSample_t::timeStamp**

CPU Timestamp in microseconds.

unsigned int nvmlProcessUtilizationSample_t::smUtil

SM (3D/Compute) Util Value.

unsigned int nvmlProcessUtilizationSample_t::memUtil

Frame Buffer Memory Util Value.

unsigned int nvmlProcessUtilizationSample_t::encUtil

Encoder Util Value.

unsigned int nvmlProcessUtilizationSample_t::decUtil

Decoder Util Value.

6.67. nvmlPSUInfo_t Struct Reference

Power usage information for an S-class unit. The power supply state is a human readable string that equals "Normal" or contains a combination of "Abnormal" plus one or more of the following:

- ▶ High voltage
- ▶ Fan failure
- ▶ Heatsink temperature
- ▶ Current limit
- ▶ Voltage below UV alarm threshold
- ▶ Low-voltage
- ▶ SI2C remote off command
- ▶ MOD_DISABLE input
- ▶ Short pin transition

char nvmlPSUInfo_t::state

The power supply state.

unsigned int nvmlPSUInfo_t::current

PSU current (A).

unsigned int nvmlPSUInfo_t::voltage

PSU voltage (V).

unsigned int nvmlPSUInfo_t::power

PSU power draw (W).

6.68. nvmlRepairStatus_v1_t Struct Reference

Struct to represent the NVML repair status

unsigned int nvmlRepairStatus_v1_t::version

API version number.

unsigned int**nvmlRepairStatus_v1_t::bChannelRepairPending**

Reference to unsigned int.

unsigned int nvmlRepairStatus_v1_t::bTpcRepairPending

Reference to unsigned int.

6.69. nvmlRowRemapperHistogramValues_t Struct Reference

Possible values that classify the remap availability for each bank. The max field will contain the number of banks that have maximum remap availability (all reserved rows are available). None means that there are no reserved rows available.

6.70. nvmlSample_t Struct Reference

Information for Sample

unsigned long long nvmlSample_t::timeStamp

CPU Timestamp in microseconds.

nvmlSample_t::sampleValue

Sample Value.

6.71. nvmlSystemConfComputeSettings_v1_t Struct Reference

Confidential Compute System settings

6.72. nvmlSystemDriverBranchInfo_v1_t Struct Reference

Structure to store Driver branch information

unsigned int nvmlSystemDriverBranchInfo_v1_t::version

The version number of this struct.

char nvmlSystemDriverBranchInfo_v1_t::branch

driver branch

6.73. nvmlSystemEventData_v1_t Struct Reference

nvmlSystemEventData_v1_t

**unsigned long long
nvmlSystemEventData_v1_t::eventType**

Information about what specific system event occurred.

unsigned int nvmlSystemEventData_v1_t::gpuld
gpuId in PCI format

6.74. nvmlSystemEventSetCreateRequest_v1_t Struct Reference

nvmlSystemEventSetCreateRequest

**unsigned int
nvmlSystemEventSetCreateRequest_v1_t::version**
the API version number

**nvmlSystemEventSet_t
nvmlSystemEventSetCreateRequest_v1_t::set**
system event set

6.75. nvmlSystemEventSetFreeRequest_v1_t Struct Reference

nvmlSystemEventSetFreeRequest

unsigned int
nvmlSystemEventSetFreeRequest_v1_t::version
the API version number

nvmlSystemEventSet_t
nvmlSystemEventSetFreeRequest_v1_t::set
system event set

6.76. nvmlSystemEventSetWaitRequest_v1_t Struct Reference

nvmlSystemEventSetWait

unsigned int
nvmlSystemEventSetWaitRequest_v1_t::version
input/output: the API version number

unsigned int
nvmlSystemEventSetWaitRequest_v1_t::timeoutms

Description

input: time to sleep waiting for event. If timeoutms is zero, skip waiting for event.

nvmlSystemEventSet_t
nvmlSystemEventSetWaitRequest_v1_t::set
 input: system event set

nvmlSystemEventData_v1_t
***nvmlSystemEventSetWaitRequest_v1_t::data**
 input/output: array of event data, owned by caller

unsigned int
nvmlSystemEventSetWaitRequest_v1_t::dataSize
 input: the size of data array

unsigned int
nvmlSystemEventSetWaitRequest_v1_t::numEvent
 output: number of event collected.

6.77. nvmlSystemRegisterEventRequest_v1_t Struct Reference

nvmlSystemRegisterEventRequest

unsigned int
nvmlSystemRegisterEventRequest_v1_t::version
 the API version number

unsigned long long
nvmlSystemRegisterEventRequest_v1_t::eventTypes

Description

Bitmask of [Event Types](#) to record For example eventTypes = (nvmlEventTypeBind | nvmlEventTypeUnbind) to listen to both Bind and Unbind events.

nvmlSystemEventSet_t
nvmlSystemRegisterEventRequest_v1_t::set
Set to which add new event types.

6.78. nvmlTemperature_v1_t Struct Reference

Structure used to encapsulate temperature info

6.79. nvmlUnitFanInfo_t Struct Reference

Fan speed reading for a single fan in an S-class unit.

unsigned int nvmlUnitFanInfo_t::speed
Fan speed (RPM).

nvmlFanState_t nvmlUnitFanInfo_t::state
Flag that indicates whether fan is working properly.

6.80. nvmlUnitFanSpeeds_t Struct Reference

Fan speed readings for an entire S-class unit.

struct nvmlUnitFanInfo_t nvmlUnitFanSpeeds_t::fans
Fan speed data for each fan.

unsigned int nvmlUnitFanSpeeds_t::count
Number of fans in unit.

6.81. nvmlUnitInfo_t Struct Reference

Static S-class unit info.

char nvmlUnitInfo_t::name

Product name.

char nvmlUnitInfo_t::id

Product identifier.

char nvmlUnitInfo_t::serial

Product serial number.

char nvmlUnitInfo_t::firmwareVersion

Firmware version.

6.82. nvmlUtilization_t Struct Reference

Utilization information for a device. Each sample period may be between 1 second and 1/6 second, depending on the product being queried.

unsigned int nvmlUtilization_t::gpu

Percent of time over the past sample period during which one or more kernels was executing on the GPU.

unsigned int nvmlUtilization_t::memory

Percent of time over the past sample period during which global (device) memory was being read or written.

6.83. nvmlUUID_v1_t Struct Reference

Struct to represent NVML UUID information

unsigned int nvmlUUID_v1_t::version

API version number.

unsigned int nvmlUUID_v1_t::type

One of `nvmlUUIDType_t`.

nvmlUUID_v1_t::value

One of `nvmlUUIDValue_t`, to be set based on the UUID format.

6.84. `nvmlUUIDValue_t` Union Reference

Union to represent different UUID values

char nvmlUUIDValue_t::str

ASCII format value.

unsigned char nvmlUUIDValue_t::bytes

Binary format value.

6.85. `nvmlValue_t` Union Reference

Union to represent different types of Value

double nvmlValue_t::dVal

If the value is double.

int nvmlValue_t::siVal

If the value is signed int.

unsigned int nvmlValue_t::uiVal

If the value is unsigned int.

unsignedlong nvmlValue_t::ulVal

If the value is unsigned long.

unsigned long long nvmlValue_t::ullVal

If the value is unsigned long long.

signed long long nvmlValue_t::sllVal

If the value is signed long long.

unsigned short nvmlValue_t::usVal

If the value is unsigned short.

6.86. nvmlVgpuCreatablePlacementInfo_v1_t Struct Reference

Structure to store creatable vGPU placement information -- version 1

unsigned int

nvmlVgpuCreatablePlacementInfo_v1_t::version

IN: The version number of this struct.

nvmlVgpuTypeId_t

nvmlVgpuCreatablePlacementInfo_v1_t::vgpuTypeId

IN: Handle to vGPU type.

unsigned int

nvmlVgpuCreatablePlacementInfo_v1_t::count

IN/OUT: Count of the placement IDs.

unsigned int

***nvmlVgpuCreatablePlacementInfo_v1_t::placementIds**

IN/OUT: Placement IDs for the vGPU type.

unsigned int

nvmlVgpuCreatablePlacementInfo_v1_t::placementSize

OUT: The number of slots occupied by the vGPU type.

6.87. nvmlVgpuHeterogeneousMode_v1_t Struct Reference

Structure to store the vGPU heterogeneous mode of device -- version 1

unsigned int

nvmlVgpuHeterogeneousMode_v1_t::version

The version number of this struct.

unsigned int nvmlVgpuHeterogeneousMode_v1_t::mode

The vGPU heterogeneous mode.

6.88. nvmlVgpuInstancesUtilizationInfo_v1_t Struct Reference

Structure to store recent utilization for vGPU instances running on a device -- version 1

unsigned int

nvmlVgpuInstancesUtilizationInfo_v1_t::version

The version number of this struct.

nvmlValueType_t

nvmlVgpuInstancesUtilizationInfo_v1_t::sampleValType

Hold the type of returned sample values.

unsigned int

nvmlVgpuInstancesUtilizationInfo_v1_t::vgpuInstanceCount

Hold the number of vGPU instances.

unsigned long long

nvmlVgpuInstancesUtilizationInfo_v1_t::lastSeenTimeStamp

Return only samples with timestamp greater than lastSeenTimeStamp.

nvmlVgpuInstanceUtilizationInfo_v1_t

***nvmlVgpuInstancesUtilizationInfo_v1_t::vgpuUtilArray**

The array (allocated by caller) in which vGPU utilization are returned.

6.89. nvmlVgpuInstanceUtilizationInfo_v1_t Struct Reference

Structure to store Utilization Value and vgpuInstance Info -- Version 1

**unsigned long long
nvmlVgpuInstanceUtilizationInfo_v1_t::timeStamp**
CPU Timestamp in microseconds.

**nvmlVgpuInstance_t
nvmlVgpuInstanceUtilizationInfo_v1_t::vgpuInstance**
vGPU Instance

nvmlVgpuInstanceUtilizationInfo_v1_t::smUtil
SM (3D/Compute) Util Value.

nvmlVgpuInstanceUtilizationInfo_v1_t::memUtil
Frame Buffer Memory Util Value.

nvmlVgpuInstanceUtilizationInfo_v1_t::encUtil
Encoder Util Value.

nvmlVgpuInstanceUtilizationInfo_v1_t::decUtil
Decoder Util Value.

nvmlVgpuInstanceUtilizationInfo_v1_t::jpgUtil
Jpeg Util Value.

nvmlVgpuInstanceUtilizationInfo_v1_t::ofaUtil
Ofa Util Value.

6.90. nvmlVgpuInstanceUtilizationSample_t Struct Reference

Structure to store Utilization Value and vgpuInstance

nvmlVgpuInstance_t

nvmlVgpuInstanceUtilizationSample_t::vgpuInstance

vGPU Instance

unsigned long long

nvmlVgpuInstanceUtilizationSample_t::timeStamp

CPU Timestamp in microseconds.

nvmlVgpuInstanceUtilizationSample_t::smUtil

SM (3D/Compute) Util Value.

nvmlVgpuInstanceUtilizationSample_t::memUtil

Frame Buffer Memory Util Value.

nvmlVgpuInstanceUtilizationSample_t::encUtil

Encoder Util Value.

nvmlVgpuInstanceUtilizationSample_t::decUtil

Decoder Util Value.

6.91. nvmlVgpuLicenseExpiry_t Struct Reference

Structure to store the vGPU license expiry details

unsigned int nvmlVgpuLicenseExpiry_t::year

Year of license expiry.

unsigned short nvmlVgpuLicenseExpiry_t::month

Month of license expiry.

unsigned short nvmlVgpuLicenseExpiry_t::day

Day of license expiry.

unsigned short nvmlVgpuLicenseExpiry_t::hour

Hour of license expiry.

unsigned short nvmlVgpuLicenseExpiry_t::min

Minutes of license expiry.

unsigned short nvmlVgpuLicenseExpiry_t::sec

Seconds of license expiry.

unsigned char nvmlVgpuLicenseExpiry_t::status

License expiry status.

6.92. nvmlVgpuMetadata_t Struct Reference

vGPU metadata structure.

unsigned int nvmlVgpuMetadata_t::version

Current version of the structure.

unsigned int nvmlVgpuMetadata_t::revision

Current revision of the structure.

nvmlVgpuGuestInfoState_t**nvmlVgpuMetadata_t::guestInfoState**

Current state of Guest-dependent fields.

char nvmlVgpuMetadata_t::guestDriverVersion

Version of driver installed in guest.

char nvmlVgpuMetadata_t::hostDriverVersion

Version of driver installed in host.

unsigned int nvmlVgpuMetadata_t::reserved

Reserved for internal use.

unsigned int**nvmlVgpuMetadata_t::vgpuVirtualizationCaps**

vGPU virtualization capabilities bitfield

unsigned int nvmlVgpuMetadata_t::guestVgpuVersion

vGPU version of guest driver

unsigned int nvmlVgpuMetadata_t::opaqueDataSize

Size of opaque data field in bytes.

char nvmlVgpuMetadata_t::opaqueData

Opaque data.

6.93. nvmlVgpuPgpuCompatibility_t Struct Reference

vGPU-pGPU compatibility structure

nvmlVgpuVmCompatibility_t

nvmlVgpuPgpuCompatibility_t::vgpuVmCompatibility

Compatibility of vGPU VM. See nvmlVgpuVmCompatibility_t.

nvmlVgpuPgpuCompatibilityLimitCode_t

nvmlVgpuPgpuCompatibility_t::compatibilityLimitCode

Limiting factor for vGPU-pGPU compatibility. See
nvmlVgpuPgpuCompatibilityLimitCode_t.

6.94. nvmlVgpuPgpuMetadata_t Struct Reference

Physical GPU metadata structure

unsigned int nvmlVgpuPgpuMetadata_t::version

Current version of the structure.

unsigned int nvmlVgpuPgpuMetadata_t::revision

Current revision of the structure.

char nvmlVgpuPgpuMetadata_t::hostDriverVersion

Host driver version.

unsigned int

nvmlVgpuPgpuMetadata_t::pgpuVirtualizationCaps

Pgpu virtualization capabilities bitmask.

unsigned int nvmlVgpuPgpuMetadata_t::reserved

Reserved for internal use.

struct nvmlVgpuVersion_t

nvmlVgpuPgpuMetadata_t::hostSupportedVgpuRange

vGPU version range supported by host driver

unsigned int nvmlVgpuPgpuMetadata_t::opaqueDataSize

Size of opaque data field in bytes.

char nvmlVgpuPgpuMetadata_t::opaqueData

Opaque data.

6.95. nvmlVgpuPlacementId_v1_t Struct Reference

Structure to store the placement ID of vGPU instance -- version 1

unsigned int nvmlVgpuPlacementId_v1_t::version

The version number of this struct.

unsigned int nvmlVgpuPlacementId_v1_t::placementId

Placement ID of the active vGPU instance.

6.96. nvmlVgpuPlacementList_v1_t Struct Reference

Structure to store the list of vGPU placements -- version 1

unsigned int nvmlVgpuPlacementList_v1_t::version

The version number of this struct.

unsigned int**nvmlVgpuPlacementList_v1_t::placementSize**

The number of slots occupied by the vGPU type.

unsigned int nvmlVgpuPlacementList_v1_t::count

Count of placement IDs fetched.

unsigned int***nvmlVgpuPlacementList_v1_t::placementIds**

Placement IDs for the vGPU type.

6.97. nvmlVgpuPlacementList_v2_t Struct Reference

Structure to store the list of vGPU placements -- version 2

unsigned int nvmlVgpuPlacementList_v2_t::version

IN: The version number of this struct.

unsigned int**nvmlVgpuPlacementList_v2_t::placementSize**

OUT: The number of slots occupied by the vGPU type.

unsigned int nvmlVgpuPlacementList_v2_t::count

IN/OUT: Count of the placement IDs.

unsigned int***nvmlVgpuPlacementList_v2_t::placementIds**

IN/OUT: Placement IDs for the vGPU type.

unsigned int nvmlVgpuPlacementList_v2_t::mode

IN: The vGPU mode. Either NVML_VGPU_PGPU_HETEROGENEOUS_MODE or NVML_VGPU_PGPU_HOMOGENEOUS_MODE.

6.98. nvmlVgpuProcessesUtilizationInfo_v1_t Struct Reference

Structure to store recent utilization, vgpuInstance and subprocess information for processes running on vGPU instances active on a device -- version 1

unsigned int

nvmlVgpuProcessesUtilizationInfo_v1_t::version

The version number of this struct.

unsigned int

nvmlVgpuProcessesUtilizationInfo_v1_t::vgpuProcessCount

Hold the number of processes running on vGPU instances.

unsigned long long

nvmlVgpuProcessesUtilizationInfo_v1_t::lastSeenTimeStamp

Return only samples with timestamp greater than lastSeenTimeStamp.

nvmlVgpuProcessUtilizationInfo_v1_t

***nvmlVgpuProcessesUtilizationInfo_v1_t::vgpuProcUtilArray**

The array (allocated by caller) in which utilization of processes running on vGPU instances are returned.

6.99. nvmlVgpuProcessUtilizationInfo_v1_t Struct Reference

Structure to store Utilization Value, vgpuInstance and subprocess information for process running on vGPU instance -- version 1

char nvmlVgpuProcessUtilizationInfo_v1_t::processName

Name of process running within the vGPU VM.

unsigned long long**nvmlVgpuProcessUtilizationInfo_v1_t::timeStamp**

CPU Timestamp in microseconds.

nvmlVgpuInstance_t**nvmlVgpuProcessUtilizationInfo_v1_t::vgpuInstance**

vGPU Instance

unsigned int nvmlVgpuProcessUtilizationInfo_v1_t::pid

PID of process running within the vGPU VM.

unsigned int**nvmlVgpuProcessUtilizationInfo_v1_t::smUtil**

SM (3D/Compute) Util Value.

unsigned int**nvmlVgpuProcessUtilizationInfo_v1_t::memUtil**

Frame Buffer Memory Util Value.

unsigned int**nvmlVgpuProcessUtilizationInfo_v1_t::encUtil**

Encoder Util Value.

unsigned int**nvmlVgpuProcessUtilizationInfo_v1_t::decUtil**

Decoder Util Value.

unsigned int**nvmlVgpuProcessUtilizationInfo_v1_t::jpgUtil**

Jpeg Util Value.

unsigned int**nvmlVgpuProcessUtilizationInfo_v1_t::ofaUtil**

Ofa Util Value.

6.100. nvmlVgpuProcessUtilizationSample_t Struct Reference

Structure to store Utilization Value, vgpuInstance and subprocess information

nvmlVgpuInstance_t
nvmlVgpuProcessUtilizationSample_t::vgpuInstance
vGPU Instance

unsigned int nvmlVgpuProcessUtilizationSample_t::pid
PID of process running within the vGPU VM.

char nvmlVgpuProcessUtilizationSample_t::processName
Name of process running within the vGPU VM.

unsigned long long
nvmlVgpuProcessUtilizationSample_t::timeStamp
CPU Timestamp in microseconds.

unsigned int
nvmlVgpuProcessUtilizationSample_t::smUtil
SM (3D/Compute) Util Value.

unsigned int
nvmlVgpuProcessUtilizationSample_t::memUtil
Frame Buffer Memory Util Value.

unsigned int
nvmlVgpuProcessUtilizationSample_t::encUtil
Encoder Util Value.

unsigned int
nvmlVgpuProcessUtilizationSample_t::decUtil
Decoder Util Value.

6.101. nvmlVgpuRuntimeState_v1_t Struct Reference

Structure to store the information of vGPU runtime state -- version 1

unsigned int nvmlVgpuRuntimeState_v1_t::version

IN: The version number of this struct.

unsigned long long nvmlVgpuRuntimeState_v1_t::size

OUT: The runtime state size of the vGPU instance.

6.102. nvmlVgpuSchedulerCapabilities_t Struct Reference

Structure to store the vGPU scheduler capabilities

unsigned int
nvmlVgpuSchedulerCapabilities_t::supportedSchedulers
List the supported vGPU schedulers on the device.

unsigned int
nvmlVgpuSchedulerCapabilities_t::maxTimeslice
Maximum timeslice value in ns.

unsigned int
nvmlVgpuSchedulerCapabilities_t::minTimeslice
Minimum timeslice value in ns.

unsigned int
nvmlVgpuSchedulerCapabilities_t::isArrModeSupported
Flag to check Adaptive Round Robin mode enabled/disabled.

unsigned int
nvmlVgpuSchedulerCapabilities_t::maxFrequencyForARR
Maximum frequency for Adaptive Round Robin mode.

unsigned int
nvmlVgpuSchedulerCapabilities_t::minFrequencyForARR
Minimum frequency for Adaptive Round Robin mode.

unsigned int
nvmlVgpuSchedulerCapabilities_t::maxAvgFactorForARR
Maximum averaging factor for Adaptive Round Robin mode.

unsigned int
nvmlVgpuSchedulerCapabilities_t::minAvgFactorForARR
Minimum averaging factor for Adaptive Round Robin mode.

6.103. nvmlVgpuSchedulerGetState_t Struct Reference

Structure to store the vGPU scheduler state

unsigned int nvmlVgpuSchedulerGetState_t::schedulerPolicy
Scheduler policy.

unsigned int nvmlVgpuSchedulerGetState_t::arrMode
Adaptive Round Robin scheduler mode. One of the
NVML_VGPU_SCHEDULER_ARR_*.

6.104. nvmlVgpuSchedulerLog_t Struct Reference

Structure to store a vGPU software scheduler log

unsigned int nvmlVgpuSchedulerLog_t::enginId
Engine whose software runlist log entries are fetched.

unsigned int nvmlVgpuSchedulerLog_t::schedulerPolicy
Scheduler policy.

unsigned int nvmlVgpuSchedulerLog_t::arrMode
Adaptive Round Robin scheduler mode. One of the
NVML_VGPU_SCHEDULER_ARR_*.

unsigned int nvmlVgpuSchedulerLog_t::entriesCount
Count of log entries fetched.

6.105. nvmlVgpuSchedulerLogEntry_t Struct Reference

Structure to store the state and logs of a software runlist

**unsigned long long
nvmlVgpuSchedulerLogEntry_t::timestamp**

Timestamp in ns when this software runlist was preeempted.

**unsigned long long
nvmlVgpuSchedulerLogEntry_t::timeRunTotal**

Total time in ns this software runlist has run.

**unsigned long long
nvmlVgpuSchedulerLogEntry_t::timeRun**

Time in ns this software runlist ran before preemption.

unsigned int nvmlVgpuSchedulerLogEntry_t::swRunlistId

Software runlist Id.

**unsigned long long
nvmlVgpuSchedulerLogEntry_t::targetTimeSlice**

The actual timeslice after deduction.

**unsigned long long
nvmlVgpuSchedulerLogEntry_t::cumulativePreemptionTime**

Preemption time in ns for this SW runlist.

6.106. nvmlVgpuSchedulerLogInfo_v1_t Struct Reference

Structure to store vGPU scheduler log information -- Version 1

unsigned int nvmlVgpuSchedulerLogInfo_v1_t::version

IN: The version number of this struct.

unsigned int nvmlVgpuSchedulerLogInfo_v1_t::engineId

IN: Engine whose software runlist log entries are fetched. One of One of NVML_VGPU_SCHEDULER_ENGINE_TYPE_*.

unsigned int**nvmlVgpuSchedulerLogInfo_v1_t::schedulerPolicy**

OUT: Scheduler policy.

unsigned int nvmlVgpuSchedulerLogInfo_v1_t::arrMode

OUT: Adaptive Round Robin scheduler mode. One of the NVML_VGPU_SCHEDULER_ARR_*.

nvmlVgpuSchedulerLogInfo_v1_t::schedulerParams

OUT: vGPU Scheduler Parameters.

unsigned int**nvmlVgpuSchedulerLogInfo_v1_t::entriesCount**

OUT: Count of log entries fetched.

struct nvmlVgpuSchedulerLogEntry_t**nvmlVgpuSchedulerLogInfo_v1_t::logEntries**

OUT: Structure to store the state and logs of a software runlist.

6.107. nvmlVgpuSchedulerParams_t Union Reference

Union to represent the vGPU Scheduler Parameters

unsigned int nvmlVgpuSchedulerParams_t::avgFactor

Average factor in compensating the timeslice for Adaptive Round Robin mode.

unsigned int nvmlVgpuSchedulerParams_t::timeslice

The timeslice in ns for each software run list as configured, or the default value otherwise.

6.108. nvmlVgpuSchedulerSetParams_t Union Reference

Union to represent the vGPU Scheduler set Parameters

unsigned int nvmlVgpuSchedulerSetParams_t::avgFactor

Average factor in compensating the timeslice for Adaptive Round Robin mode.

unsigned int nvmlVgpuSchedulerSetParams_t::frequency

Frequency for Adaptive Round Robin mode.

unsigned int nvmlVgpuSchedulerSetParams_t::timeslice

The timeslice in ns(Nanoseconds) for each software run list as configured, or the default value otherwise.

6.109. nvmlVgpuSchedulerSetState_t Struct Reference

Structure to set the vGPU scheduler state

**unsigned int
nvmlVgpuSchedulerSetState_t::schedulerPolicy**
Scheduler policy.

**unsigned int
nvmlVgpuSchedulerSetState_t::enableARRMode**
Adaptive Round Robin scheduler.

6.110. nvmlVgpuSchedulerState_v1_t Struct Reference

Structure to set vGPU scheduler state information -- version 1

unsigned int nvmlVgpuSchedulerState_v1_t::version
IN: The version number of this struct.

unsigned int nvmlVgpuSchedulerState_v1_t::engineId
IN: One of NVML_VGPU_SCHEDULER_ENGINE_TYPE_*.

**unsigned int
nvmlVgpuSchedulerState_v1_t::schedulerPolicy**
IN: Scheduler policy.

**unsigned int
nvmlVgpuSchedulerState_v1_t::enableARRMode**
IN: Adaptive Round Robin scheduler.

nvmlVgpuSchedulerState_v1_t::schedulerParams
IN: vGPU Scheduler Parameters.

6.111. nvmlVgpuSchedulerStateInfo_v1_t Struct Reference

Structure to store vGPU scheduler state information -- Version 1

`unsigned int nvmlVgpuSchedulerStateInfo_v1_t::version`

IN: The version number of this struct.

`unsigned int`**`nvmlVgpuSchedulerStateInfo_v1_t::engineId`**

IN: Engine whose software scheduler state info is fetched. One of `NVML_VGPU_SCHEDULER_ENGINE_TYPE_*`.

`unsigned int`**`nvmlVgpuSchedulerStateInfo_v1_t::schedulerPolicy`**

OUT: Scheduler policy.

`unsigned int`**`nvmlVgpuSchedulerStateInfo_v1_t::arrMode`**

OUT: Adaptive Round Robin scheduler mode. One of the `NVML_VGPU_SCHEDULER_ARR_*`.

`nvmlVgpuSchedulerStateInfo_v1_t::schedulerParams`

OUT: vGPU Scheduler Parameters.

6.112. `nvmlVgpuTypeBar1Info_v1_t` Struct Reference

Structure to store BAR1 size information of vGPU type -- Version 1

`unsigned int nvmlVgpuTypeBar1Info_v1_t::version`

The version number of this struct.

`unsigned long long`**`nvmlVgpuTypeBar1Info_v1_t::bar1Size`**

BAR1 size in megabytes.

6.113. `nvmlVgpuTypeldInfo_v1_t` Struct Reference

Structure to store the vGPU type IDs -- version 1

unsigned int nvmlVgpuTypeIdInfo_v1_t::version

IN: The version number of this struct.

unsigned int nvmlVgpuTypeIdInfo_v1_t::vgpuCount

IN/OUT: Number of vGPU types.

nvmlVgpuTypeId_t***nvmlVgpuTypeIdInfo_v1_t::vgpuTypeIds**

OUT: List of vGPU type IDs.

6.114. nvmlVgpuTypeMaxInstance_v1_t Struct Reference

Structure to store the maximum number of possible vGPU type IDs -- version 1

unsigned int nvmlVgpuTypeMaxInstance_v1_t::version

IN: The version number of this struct.

nvmlVgpuTypeId_t**nvmlVgpuTypeMaxInstance_v1_t::vgpuTypeId**

IN: Handle to vGPU type.

unsigned int**nvmlVgpuTypeMaxInstance_v1_t::maxInstancePerGI**

OUT: Maximum number of vGPU instances per GPU instance.

6.115. nvmlVgpuVersion_t Struct Reference

Structure representing range of vGPU versions.

unsigned int nvmlVgpuVersion_t::minVersion

Minimum vGPU version.

unsigned int nvmlVgpuVersion_t::maxVersion

Maximum vGPU version.

6.116. nvmlViolationTime_t Struct Reference

Struct to hold perf policy violation status data

unsigned long long nvmlViolationTime_t::referenceTime

referenceTime represents CPU timestamp in microseconds

unsigned long long nvmlViolationTime_t::violationTime

violationTime in Nanoseconds

6.117. nvmlWorkloadPowerProfileCurrentProfiles_v1_t Struct Reference

Current Profiles

nvmlMask255_t

nvmlWorkloadPowerProfileCurrentProfiles_v1_t::perfProfilesMask

Mask bit set to true for each valid performance profile.

nvmlMask255_t

nvmlWorkloadPowerProfileCurrentProfiles_v1_t::requestedProfiles

Mask of currently requested performance profiles.

nvmlMask255_t

nvmlWorkloadPowerProfileCurrentProfiles_v1_t::enforcedProfilesM

Mask of currently enforced performance profiles post all arbitrations among the requested profiles.

6.118. **nvmlWorkloadPowerProfileInfo_v1_t** Struct Reference

Profile Metadata

unsigned int

nvmlWorkloadPowerProfileInfo_v1_t::version

the API version number

unsigned int

nvmlWorkloadPowerProfileInfo_v1_t::profileId

Performance Profile Id to provide semantic name such as compute, Memory, Max-Q...

unsigned int

nvmlWorkloadPowerProfileInfo_v1_t::priority

Priority of the profile.

nvmlMask255_t

nvmlWorkloadPowerProfileInfo_v1_t::conflictingMask

Mask of conflicting performance profiles.

6.119. nvmlWorkloadPowerProfileProfilesInfo_v1_t Struct Reference

Profiles Info

unsigned int

nvmlWorkloadPowerProfileProfilesInfo_v1_t::version

the API version number

nvmlMask255_t

nvmlWorkloadPowerProfileProfilesInfo_v1_t::perfProfilesMask

Mask bit set to true for each valid performance profile.

struct nvmlWorkloadPowerProfileInfo_t

nvmlWorkloadPowerProfileProfilesInfo_v1_t::perfProfile

Array of performance profile info parameters.

6.120. **nvmlWorkloadPowerProfileRequestedProfiles_v1_t** Struct Reference

Requested Profiles

unsigned int

nvmlWorkloadPowerProfileRequestedProfiles_v1_t::version

the API version number

nvmlMask255_t

nvmlWorkloadPowerProfileRequestedProfiles_v1_t::requestedProf

Mask of 255 bits, each bit representing index of respective perf profile.

Chapter 7. DATA FIELDS

Here is a list of all documented struct and union fields with links to the struct/union documentation for each field:

Chapter 8. DEPRECATED LIST

Class nvmlEccErrorCounts_t

Different GPU families can have different memory error counters See
nvmlDeviceGetMemoryErrorHandler

Class nvmlGpuFabricInfo_v2_t

nvmlGpuFabricInfo_v2_t is deprecated and will be removed in a future release. Use
nvmlGpuFabricInfo_v3_t instead

Class nvmlPlatformInfo_v1_t

The nvmlPlatformInfo_v1_t will be deprecated in the subsequent releases. Use
nvmlPlatformInfo_v2_t

Global nvmlEccBitType_t

See nvmlMemoryErrorHandler_t for a more flexible type

Global NVML_SINGLE_BIT_ECC

Mapped to NVML_MEMORY_ERROR_TYPE_CORRECTED

Global NVML_DOUBLE_BIT_ECC

Mapped to NVML_MEMORY_ERROR_TYPE_UNCORRECTED

Global nvmlDeviceGetHandleBySerial

Since more than one GPU can exist on a single board this function is deprecated in favor of nvmlDeviceGetHandleByUUID. For dual GPU boards this function will return NVML_ERROR_INVALID_ARGUMENT.

Global nvmlDeviceGetApplicationsClock

Applications clocks are deprecated and will be removed in CUDA 14.0.

Global nvmlDeviceGetDefaultApplicationsClock

Applications clocks are deprecated and will be removed in CUDA 14.0.

Global nvmlDeviceGetTemperature

Use nvmlDeviceGetTemperatureV instead

Global nvmlDeviceGetCurrentClocksThrottleReasons

Use nvmlDeviceGetCurrentClocksEventReasons instead

Global nvmlDeviceGetSupportedClocksThrottleReasons

Use nvmlDeviceGetSupportedClocksEventReasons instead

Global nvmlDeviceGetPowerState

Use nvmlDeviceGetPerformanceState. This function exposes an incorrect generalization.

Global nvmlDeviceGetPowerManagementMode

This API has been deprecated.

Global nvmlDeviceGetDetailedEccErrors

This API supports only a fixed set of ECC error locations On different GPU architectures different locations are supported See nvmlDeviceGetMemoryErrorCounter

Global nvmlDeviceGetViolationStatus

Use nvmlDeviceGetFieldValues to query this data. This API will be removed in CUDA 14.0.

Global nvmlDeviceGetGpuFabricInfo

Will be deprecated in a future release. Use nvmlDeviceGetGpuFabricInfoV instead

Global nvmlDeviceSetApplicationsClocks

Applications clocks are deprecated and will be removed in CUDA 14.0.

Global nvmlDeviceResetApplicationsClocks

Applications clocks are deprecated and will be removed in CUDA 14.0.

Global nvmlDeviceSetGpcClkVfOffset

Will be deprecated in a future release. Use nvmlDeviceSetClockOffsets instead. It works on Maxwell onwards GPU architectures.

Global nvmlDeviceSetMemClkVfOffset

Will be deprecated in a future release. Use nvmlDeviceSetClockOffsets instead. It works on Maxwell onwards GPU architectures.

Global nvmlDeviceSetNvLinkUtilizationControl

Setting utilization counter control is no longer supported.

Global nvmlDeviceGetNvLinkUtilizationControl

Getting utilization counter control is no longer supported.

Global nvmlDeviceGetNvLinkUtilizationCounter

Use nvmlDeviceGetFieldValues with NVML_FI_DEV_NVLINK_THROUGHPUT_* as field values instead.

Global nvmlDeviceFreezeNvLinkUtilizationCounter

Freezing NVLINK utilization counters is no longer supported.

Global nvmlDeviceResetNvLinkUtilizationCounter

Resetting NVLINK utilization counters is no longer supported.

Global nvmlVgpuInstanceGetLicenseStatus

Use nvmlVgpuInstanceGetLicenseInfo_v2.

Global nvmlClocksThrottleReasonUserDefinedClocks

Renamed to nvmlClocksThrottleReasonApplicationsClocksSetting as the name describes the situation more accurately.

Global nvmlClocksThrottleReasonGpuIdle

Use nvmlClocksEventReasonGpuIdle instead

Global nvmlClocksThrottleReasonApplicationsClocksSetting**Global nvmlClocksThrottleReasonSyncBoost**

Use nvmlClocksEventReasonSyncBoost instead

Global nvmlClocksThrottleReasonSwPowerCap

Use nvmlClocksEventReasonSwPowerCap instead

Global nvmlClocksThrottleReasonSwThermalSlowdown

Use nvmlClocksEventReasonSwThermalSlowdown instead

Global nvmlClocksThrottleReasonDisplayClockSetting

Use nvmlClocksEventReasonDisplayClockSetting instead

Global nvmlClocksThrottleReasonNone

Use nvmlClocksEventReasonNone instead

Global nvmlClocksThrottleReasonAll

Use nvmlClocksEventReasonAll instead
